Company Name: Con Edison
Case Description: 2025 CECONY Electric and Gas Rate Cases
Case: 25-E-0072, 25-G-0073

Response to Independent Intervenors Interrogatories – Set II-1
Date of Response: November 20, 2025
Responding Witness: N/A

Question No. :1
We have questions about Appendix 11 of the JP. A copy and an Excel version is attached.

We have questions about three project categories in Appendix 11. Projects named "Interference - Electric", are highlighted in yellow and "New Business Capital" are highlighted in amber and "Non-Network Resiliency Cutout" are highlighted in green.

We would like a definition of interference. There are 37 occurrences of the word in the JP and it is not defined in any of them.

We would also like an explanation of what exactly is being addressed with "New Business" in the JP. What are the projects as that is also not defined?

We summed up the totals of those categories and $209 million is devoted to "Interference" while 35.3% of the capital budget is devoted to "New Business Capital and Non-Network Resiliency Cutout".

We searched through the JP and the information was not included. An AI search of the document could not find it either, beyond referring to it as "New Business" for increased electrification for additional customers.

Finally, what is the "New Business" in explicit terms?

Response

1. We would like a definition of interference. There are 37 occurrences of the word in the JP and it is not defined in any of them.

Please see the direct testimony of Staff's Municipal Infrastructure Support Panel on pp. 3-4:

Q. Please explain municipal interference and why Con Edison incurs costs related to municipal interference.

A. Municipal interference occurs when Con Edison's facilities are within, or very close to, the work area of a municipal project and depending on the project scope, Con Edison must relocate or protect its facilities. The majority of the Company's costs to relocate and protect its facilities are not reimbursable by the municipalities. Common municipal projects that generate interference costs for Con Edison include, but are not limited to, installation and repair of sewers and drainage facilities, and the reconstruction of roadways, curbs, sidewalks, and highway bridges.

Please see the initial testimony of the Company's Municipal Infrastructure Support Panel on page 9-10:

Q. Please explain the term "interference" as it pertains to the Company.

A. Con Edison has an extensive system of gas and electric facilities under and above the streets in the service territory, including but not limited to gas mains, gas services, manholes, vaults, electric services, electric cables, conduits, poles, and appurtenances of various sizes and operating voltages. Under the streets, Con Edison gas and electric facilities share space with privately-owned facilities such as telephone and cable TV, and with municipally owned facilities such as water, sewer, transit and traffic facilities. Above ground, Con Edison electric overhead facilities share space with telephone, cable TV, fire alarm, street lighting and traffic signals.

The term "interference" describes the work Con Edison must perform whenever its overhead or underground facilities are "in the way" on a municipal project and therefore must be located, identified, relocated, replaced, protected, or otherwise supported to accommodate the municipal project.

A detailed description of Con Edison's program to address interference can be found starting on page 9 line 15 through page 18 line 7.

2.

a. We would also like an explanation of what exactly is being addressed with "New Business" in the JP.

Please see the direct testimony of the Company's Electric Infrastructure and Operations Panel on page 108 line 22 through page 111 line 22. For additional information please see the New Business Capital white paper in Exhibit__(EIOP-7) page 318 to 324.

b. What are the projects as that is also not defined?

The Project numbers represented in Appendix 11 do not reflect specific customer projects. Instead, they represent accounting categories that represent specific types of work being done under this program. Please see II-1-1 Attachment 1 for a description of the project numbers for the New Business Projects list in Appendix 11 Attachment 1 of the Joint Proposal filed in this case.

3. Finally, what is the "New Business" in explicit terms?

Please see the initial testimony of the Company's Electric Infrastructure and Operations Panel beginning on page 61 line 14.

New Business consists of projects and programs that connect new customers to the Company's electric system.
