cc: Active Parties in Cases 19-G-0309 and 19-G-0310
Hon. James A. Costello
Hon. Maureen F. Leary

To Ms. Phillips and all concerned parties:

It is with the strongest vehemence that I oppose National Grid NY's Joint proposal.

For one, I am extremely concerned about, not only the continuance, but what appears to be the expansion of natural gas infrastructure by The Company in the areas to be served. I recognize that the National Grid subsidiaries represented in this case are solely in the business of gas service and thus they wish to maintain their existence as such, however, considering the dire global circumstances of climate change, which is proven to be extremely exacerbated by methane (natural gas's primary component), the companies need to be looking to change their means of serving their clients via other modes of heat generation as well as non-gas alternatives regarding appliances such as cooking stoves and water heaters.

To be chartered in NYS as a corporation, the corporation must show that they provide a *public* service to NYS people. This public service *must* be their primary concern, not the profits of their share-holders and board members. When there is a conflict between a service that actually can cause harm to the public (which natural gas is increasingly shown to do in ways that not only have grievous individual health impacts but harm to the

planet as a whole), and an alternative one where the people are served with much less harm, the latter, the alternative service, the non-gas alternative service, would seem to be mandated.

My sympathies are not non-existent for the workers in the gas companies and their concern for the survival of their very jobs, however, I must be very clear in asking that far greater consideration must be given to those of us who are concerned about the survival of *all* life on this planet if we do not act immediately to do everything within our power to curtail climate chaos, including stopping all natural gas production and usage as quickly as possible, especially as methane is the most egregious of green house gases.

Thank you for your consideration.

Sincerely,

Mary T. Finneran, representing herself
