Case No. 25-E-0072 – Proceeding on Motion of the Commission as to the Rates, Charges, Rules, and Regulations of Consolidated Edison Company of New York, Inc. for Electric Service

Case No. 25-G-0073 – Proceeding on Motion of the Commission as to the Rates, Charges, Rules, and Regulations of Consolidated Edison Company of New York, Inc. for Gas Service

STATEMENT OF NEW YORKERS FOR CLEAN POWER REGARDING JOINT PROPOSAL

New Yorkers for Clean Power ("NYCP") is a statewide collaborative campaign to rapidly shift to a clean energy economy. Through research, education, advocacy, and organizing, the campaign seeks to advance a range of clean energy, building decarbonization, and clean transportation solutions as well as creating jobs in these industries for all communities in New York State (NYS). NYCP is a Project of the Catskill Mountainkeeper Inc.

NYCP respectfully submits the following comments on the Joint Proposal (JP) filed in the above referenced proceedings.

NYCP participated in the negotiations leading to the JP, but neither supports nor opposes the JP. NYCP appreciates the responsiveness from Consolidated Edison Company of New York, Inc. (Company) in attending to NYCP's request for updating its website to include content related to heat pumps in a visible and easily accessible manner. NYCP also applauds the agreement to study and eventually adopt fairer and simpler rates for heat pump customers along with an improved price guarantee program. NYCP appreciates the Company agreeing to improve its customer outreach and education on the current heat pump friendly rates, which currently have abysmally low adoption rates. These are the reasons why NYCP does not oppose the JP's adoption despite its shortcomings.

We found the Company's reluctance to include information on heat pump friendly rates on its website a bit perplexing. We hope that the Company will see the value of doing so to support its proposed improvement in customer outreach and education on these rates.

NYCP remains concerned by the level of traditional pipe replacement agreed to in the JP that locks in massive future ratepayer liabilities as well as greenhouse gas emissions even when less expensive and more climate friendly options are available. The failure by Company and DPS Staff to substitute even a relatively small fraction of planned pipeline replacement with non-replacement strategies, such as the Electric Advantage Program or another non-pipe alternative (NPA), relining, repairs, or deferral in lower-risk situations until a suitable NPA can be implemented is the reason why NYCP does not support the JP.
