Case 19-G-0309 - Proceeding on Motion of the Commission as to the Rates, Charges, Rules and Regulations of The Brooklyn Union Gas Company d/b/a National Grid NY for Gas Service.

Case 19-G-0310 - Proceeding on Motion of the Commission as to the Rates, Charges, Rules and Regulations of KeySpan Gas East Corp. d/b/a National Grid for Gas Service.

Case 18-M-0270 - Petition for Approval Pursuant to Public Service Law Section 113(2), of a Proposed Allocation of Certain Tax Refunds between KeySpan Gas East Corporation d/b/a National Grid and Ratepayers.

STAFF STATEMENT IN SUPPORT OF THE JOINT PROPOSAL

APPENDIX 1

Appendix 1 to the Staff Statement in Support of the Joint Proposal contains the response to information request DPS-286. Attachment 2 and Attachment 3 to the response are provided as separate MS Excel files named "Staff Initial Statement Appendix 1 – Attachment 2 to DPS-286" and "Staff Initial Statement Appendix 1 – Attachment 3 to DPS-286."

Date of Request: May 30, 2019
Due Date: June 10, 2019

Gas Utilities Rates

Request for Information

FROM: DPS Staff, Jennifer Park

TO: National Grid, Elizabeth D. Arangio

SUBJECT: KEDNY/KEDLI Gas Supply

Request:

Note: In all interrogatories, all requests for workpapers or supporting calculations shall be construed as requesting any Word, Excel or other computer spreadsheet models in original electronic format with all formulae intact and unlocked.

Referring to chart titled "Downstate NY Peak Day Supply/Demand Balance" on p. 15 of KEDNY and KEDLI's Gas Supply testimony, provide workpapers supporting the methodology for how the Company developed the forecasted demand and peak day supply portfolio for both Companies.

Response:

Attachment 1 provides an overview of the Companies' methodology for their retail and wholesale forecasting, which establishes the forecast demand and peak day supply portfolio for both Companies.

Attachment 2 is the spreadsheet used by the Companies to determine their customer requirements under normal and design weather conditions, as filed in its initial filing.

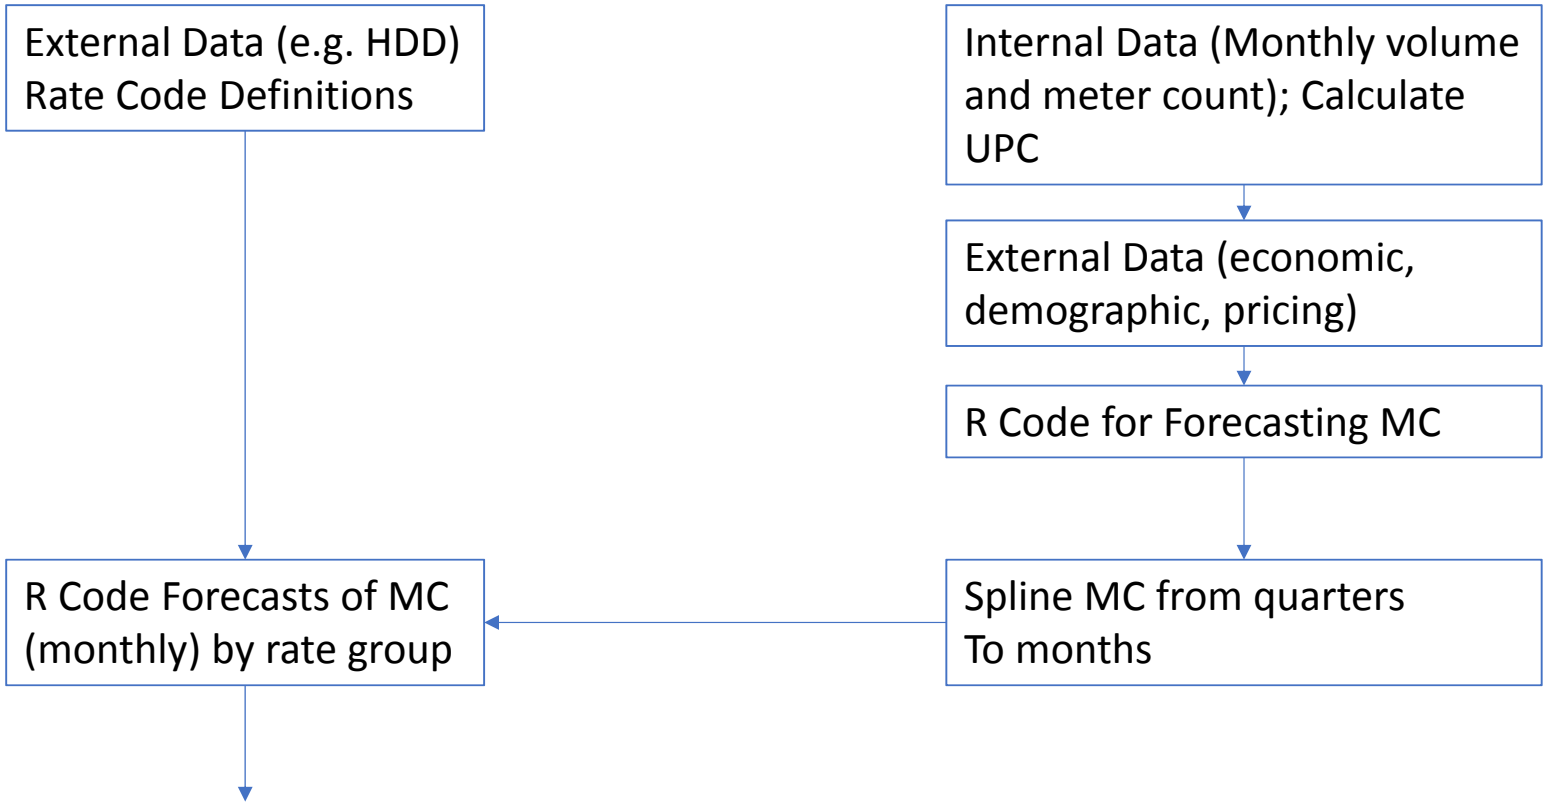

Attachment 3 is the spreadsheet used to determine the peak day supply portfolio for both Companies.

Case Nos. 19-G-0309 & 19-G-0310
Gas Utilities Rates

Request for Information

FROM: Alliance for a Green Economy, Jessica Azulay

TO: National Grid

SUBJECT: Joint Proposal

Request:

7. Page 33-34 of the Joint Proposal states: "In Case 19-G-0678, the Commission approved a settlement agreement wherein the Companies agreed to identify potential solutions for addressing the gap between the Companies' supply of natural gas and the forecast of firm demands of customers. As part of a portfolio of solutions to meet peak demand, the Companies have identified opportunities to implement certain incremental non-infrastructure solutions (i.e., demand response and incremental energy efficiency programs). As discussed in Section IV.5.3 of this Joint Proposal, the Companies are also considering certain Long-Term Capital Capacity Projects to address the supply/demand gap."

   a. Please quantify the "gap between the Companies' supply of natural gas and the forecast of firm demands of customers." Please quantify this gap for each of the next 5 years, including 2021.

   b. Please describe the assumptions made when calculating this gap, including but not limited to: the impact of new customer connections, the impact of the companies' numerous commitments under the "Future of Heat" section of the Joint Proposal, and the requirements of the New Efficiency New York order.

Response:

Please see the Companies' "Supply and Demand Analysis Related to Service Areas with Known Supply Constraint Vulnerabilities," filed on July 17, 2020, in Case 20-G-0131.

- Section 2 provides an overview of the Companies' service territory. It generally describes the geographic areas and number of customers the Companies' serve, the portfolio of supply sources, and a description of how the Companies procure and deliver various supply resources to customers through a combination of owned infrastructure and contracts with third parties.

- Section 3 provides an overview of the general approach National Grid has applied to define and identify "vulnerable locations," if any, in the service territory.

- Section 4 describes the Companies' demand forecasting methodology, design criteria, supply portfolio, system level supply/demand outlook, and specific methodology to identify vulnerable locations.

- Section 5 describes each vulnerable location in detail, including options under consideration as part of a plan to resolve each potential supply/demand imbalance.

Figure 18 (page 28) depicts National Grid's Downstate NY gas supply portfolio and shows how the supply stack compares to forecast Design Day requirements (with and without the assumed impacts of increasing energy efficiency, demand response, and electrification) over the next ten years.
