Before the Public Service Commission

THE BROOKLYN UNION GAS COMPANY d/b/a NATIONAL GRID NY
And
KEYSPAN GAS EAST CORPORATION d/b/a NATIONAL GRID

Direct Testimony

of

Gas Load Forecasting Panel

Dated: April 28, 2023

Testimony of Gas Load Forecasting Panel

Table of Contents

I. Introduction and Qualifications 1

II. Purpose of Testimony 6

III. Overview of the Companies' Retail Gas Deliveries 11

IV. Gas Delivery Forecast 15

1. KEDNY Residential Non-Heating 40

2. KEDNY Residential Heating..... 42

3. KEDNY Multi-Family..... 44

4. KEDNY Commercial 45

1. KEDLI Residential Non-Heating 48

2. KEDLI Residential Heating..... 51

3. KEDLI Multi-Family..... 53

4. KEDLI Commercial 55

V. Conclusion 58

I. Introduction and Qualifications

Q. **Please introduce the members of the Gas Load Forecasting Panel.**

A. The Panel members are Theodore Poe, Jr., Shilpa Sethia, and Thomas Gumbley.

Q. Mr. Poe, please state your name and business address.

A. My name is Theodore Poe, Jr., and my business address is 170 Data Drive, Waltham, Massachusetts 02451.

Q. By whom are you employed and in what capacity?

A. I am employed by National Grid USA Service Company, Inc. ("Service Company"), a subsidiary of National Grid USA ("National Grid"), as the Manager of Gas Load Forecasting. I am responsible for supervising the development of the gas load forecasts for National Grid's gas utilities, including The Brooklyn Union Gas Company d/b/a National Grid NY ("KEDNY") and KeySpan Gas East Corporation d/b/a National Grid ("KEDLI") (collectively, the "Companies").

Q. Please describe your educational background and professional experience.

A. I graduated from the Massachusetts Institute of Technology in 1978 with a Bachelor of Science in Geology. From 1981 to 1989, I worked as a Research Associate with Jensen Associates, Inc. of Boston where I was responsible for developing a variety of computer forecasting models to analyze natural gas supply and demand for interstate pipeline and local distribution companies. Upon accepting employment with Boston Gas Company in 1989, I was responsible for modeling and forecasting the natural gas resource requirements of the company's customers and managing its resource-planning process. In 1998 and 1999, I undertook the same responsibility for Essex Gas Company and Colonial Gas Company, respectively. In 2000, I assumed responsibility for modeling and forecasting the natural gas resource requirements of KEDNY and KEDLI. In 2008, I assumed the additional responsibility for modeling and forecasting the natural gas resource requirements of The Narragansett Electric Company and Niagara Mohawk Power Corporation ("NMPC").

Q. Are you a member of any professional organizations?

A. I am a member of the Northeast Gas Association, the New England-Canada Business Council, and the American Meteorological Society.

Q. Have you previously testified before or submitted testimony with the New York Public Service Commission?

A. Yes. I testified in the 2016 KEDNY and KEDLI rate case proceedings (Cases 16-G-0058 and 16-G-0059, respectively) (the "2016 KEDNY and KEDLI Rate Cases"), the 2019 KEDNY and KEDLI rate proceedings (Cases 19-G-0309 and 19-G-0310, respectively) (the "2019 KEDNY and KEDLI Rate Cases"), the 2017 Niagara Mohawk rate case (Case 17-G-0239) (the "2017 NMPC Rate Case"), and the 2020 Niagara Mohawk rate case (Case 20-G-0381) (the "2020 NMPC Rate Case").

Q. Ms. Sethia, please state your name and business address.

A. My name is Shilpa Sethia, and my business address is 170 Data Drive, Waltham, Massachusetts 02451.

Q. By whom are you employed and in what capacity?

A. I am employed by the Service Company as the Manager of distributed energy resources ("DER"), Policy, and Economic Analysis. I am responsible for supervising the development of DER, demand side management, policy, and economic inputs for National Grid's gas and electric utilities, including KEDNY and KEDLI.

Q. Please describe your educational background and professional experience.

A. I graduated from St. Xavier's College in Kolkata, India in 2010 with a Bachelor of Science in Economics, and from Presidency College in Kolkata, India in 2012 with a Master of Science in Applied Economics. From 2012 to 2014, I worked as a consultant with AF Mercados EMI in India where I was responsible for developing and deploying a variety of quantitative models for forecasting short-term electricity demand, short-term unit commitment models for merit-order dispatch of electricity, and optimization models for capacity expansion and planning. From 2014 to 2015, I was a consultant with KPMG in India where I was responsible for a range of forecasting and optimization projects pertaining to the Indian power sector. From 2015 through 2020, I was at the University of Connecticut where I completed my Master's in Quantitative Economics and Ph.D. in Economics focusing on applied microeconomics, specifically on industrial organization and environmental economics. I also taught principle and intermediate level core economics and quantitative courses. I joined National Grid in 2020. From 2020 through 2022, I was part of the Gas Load Forecasting team and was responsible for modeling and forecasting the natural gas resource requirements. In January 2023, I was

promoted to my current role of Manager, DER, Policy, and Economic Analysis at National Grid.

Q. Mr. Gumbley, please state your name and business address.

A. My name is Thomas Gumbley, and my business address is 170 Data Drive, Waltham, Massachusetts 02451.

Q. By whom are you employed and in what capacity?

A. I am employed by the Service Company as Senior Data Scientist for Gas Load Forecasting. I am responsible for the development of the gas load forecasts for National Grid's gas utilities, including KEDNY and KEDLI.

Q. Please describe your educational background and professional experience.

A. I graduated from Stonehill College in 2016 with a Bachelor of Arts in Economics and Environmental Studies, and from Montana State University in 2018 with a Master of Science in Applied Economics. As a graduate student, I published research on the price dynamics between fertilizer, natural gas, and commodity markets. From 2018 to 2021, I worked as a Manager at the RepTrak Company, where I was responsible for developing and interpreting statistical models related to corporate reputation tracking.

I started with National Grid in 2021, and am responsible for modeling and forecasting the natural gas resource requirements of the Companies' customers and managing its resource-planning process

II. Purpose of Testimony

Q. What is the purpose of your testimony?

A. The purpose of our testimony is to provide historic and forecast customer demand data used by the Companies to prepare the forecast of gas revenues and gas costs for the twelve months ending March 31, 2025 ("Rate Year"). The data includes historic data through October 2022 and forecast data up to and including the Rate Year and the following three years ending March 31, 2026, March 31, 2027, and March 31, 2028 ("Data Year 1," "Data Year 2," and "Data Year 3," respectively). The Companies are including forecast data for Data Year 1, Data Year 2, and Data Year 3 (collectively, the "Data Years") for informational purposes and to facilitate the possibility of a multi-year rate settlement in this proceeding. For purposes of this testimony, Fiscal Year ("FY") shall mean the Companies' fiscal year, which is the twelve-month period from April 1st to March 31st.

Q. Are you sponsoring any exhibits in support of your testimony?

A. Yes. The Panel is sponsoring the following exhibits that were prepared by us or under our direct supervision:

Exhibit __ (GLF-1A) KEDNY Fiscal Year Deliveries by Service and Revenue Class for the Period FY2018 - FY2022

Exhibit __ (GLF-1B) KEDLI Fiscal Year Deliveries by Service and Revenue Class for the Period FY2018 - FY2022

Exhibit __ (GLF-2A) KEDNY Average Annual Fiscal Year Use per Customer Based on Total Residential Deliveries for the Historical Fiscal Years FY2018 - FY 2022 and the Forecast Fiscal Years FY2023 - FY2028

Exhibit __ (GLF-2B) KEDLI Average Annual Fiscal Year Use per Customer Based on Total Residential Deliveries for the Historical Fiscal Years FY2018 - FY 2022 and the Forecast Fiscal Years FY2023 - FY2028

Exhibit __ (GLF-3A) KEDNY End-of-Fiscal Year Customer Count by Service and Revenue Class for the Period FY2018 - FY2022

Exhibit __ (GLF-3B) KEDLI End-of-Fiscal Year Customer Count by Service and Revenue Class for the Period FY2018 - FY2022

Exhibit __ (GLF-4A) KEDNY Forecast Fiscal Year Deliveries by Service and Revenue Class for the Period FY2023 - FY2028

Exhibit __ (GLF-4B) KEDLI Forecast Fiscal Year Deliveries by Service and Revenue Class for the Period FY2023 - FY2028

Exhibit __ (GLF-5A) KEDNY Forecast End-of-Fiscal Year Customer Count by Service and Revenue Class for the Period FY2023 - FY2028

Exhibit __ (GLF-5B) KEDLI Forecast End-of-Fiscal Year Customer Count by Service and Revenue Class for the Period FY2023 - FY2028

Exhibit __ (GLF-6A-ECON) KEDNY Historical and Projected Economic Indicators Used to Develop the Forecast Models

Exhibit __ (GLF-6A-PRICES) KEDNY Historical and Projected Price Indicators Used to Develop the Forecast Models

Exhibit __ (GLF-6B-ECON) KEDLI Historical and Projected Economic Indicators Used to Develop the Forecast Models

Exhibit __ (GLF-6B-PRICES) KEDLI Historical and Projected Price Indicators Used to Develop the Forecast Models

Exhibit __ (GLF-7A) KEDNY Historical Actual Billed Sales Data by Month and by Class for the Period April 2017 - October 2022

Exhibit _ (GLF-7B)	KEDLI Historical Actual Billed Sales Data by Month and by Class for the Period April 2017 - October 2022
Exhibit __ (GLF-8A)	KEDNY Historical Weather Normalized Billed Sales Data by Month and by Class for the Period April 2017 - October 2022
Exhibit __ (GLF-8B)	KEDLI Historical Weather Normalized Billed Sales Data by and by Class for the Period April 2017 - October 2022
Exhibit __ (GLF-9A)	KEDNY Historical Actual Customer Counts by Month and by Class for the Period April 2017 - October 2022
Exhibit __ (GLF-9B)	KEDLI Historical Actual Customer Counts by Month and by Class for the Period April 2017 - October 2022
Exhibit __ (GLF-10A)	Delivery Forecast Model Specifications – KEDNY – Meter Count
Exhibit __ (GLF-10B)	Delivery Forecast Model Specifications – KEDNY – Use Per Customer
Exhibit __ (GLF-10C)	Delivery Forecast Model Specifications – KEDLI – Meter Count

Exhibit __ (GLF-10D) Delivery Forecast Model Specifications – KEDLI – Use Per Customer

Exhibit __ (GLF-11) 30-Year Normal Heating Degree Days

Exhibit __ (GLF-12A) KEDNY Fiscal Year Actual Use per Customer by Service and Revenue Class for the Period FY2018 - FY2022

Exhibit __ (GLF-12B) KEDLI Fiscal Year Actual Use per Customer by Service and Revenue Class for the Period FY2018 - FY2022

Exhibit __ (GLF-13A) KEDNY Fiscal Year Normalized Use per Customer by Service and Revenue Class for the Period FY2018 - FY2022

Exhibit __ (GLF-13B) KEDLI Fiscal Year Normalized Use per Customer by Service and Revenue Class for the Period FY2018 - FY2022

Exhibit __ (GLF-14A) KEDNY Forecast Fiscal Year Use per Customer by Service and Revenue Class for the Period FY2023 - FY2028

Exhibit __ (GLF-14B) KEDLI Forecast Fiscal Year Use per Customer by Service and Revenue Class for the Period FY2023 - FY2028

Exhibit __ (GLF-15A) KEDNY End-of-Fiscal Year Customer Loss from Post-Model Adjustments FY2023 - FY2028

Exhibit __ (GLF-15B) KEDLI End-of-Fiscal Year Customer Loss from Post-Model Adjustments FY2023 - FY2028

Exhibit __ (GLF-16A) KEDNY End-of-Fiscal Year Volume Impact from Post-Model Adjustments FY2023 - FY2028

Exhibit __ (GLF-16B)KEDLI End-of-Fiscal Year Volume Impact from Post-Model Adjustments FY2023 - FY2028

III. Overview of the Companies' Retail Gas Deliveries

Q. Please provide a summary of the Companies' forecast over the FY 2023 through FY 2028 time period.

A. KEDNY's natural gas deliveries are projected to increase by 10.1 million therms per year or a compound annual growth rate of 0.60 percent per annum. Net meter counts are projected to increase by 2,969 meters per year or a compound annual growth rate of 0.23 percent per annum.

KEDLI's natural gas deliveries are projected to increase by 15.3 million therms per year or a compound annual growth rate of 1.37 percent per annum. Net meter counts are projected to increase by 6,562 meters per year or a compound annual growth rate of 1.02 percent per annum.

The Companies' forecast growth is net of projected savings from demand-side management programs in the Companies' service areas and the impact of local laws intended to reduce gas usage. The specific methodology used for the Companies' forecasts is described in further detail below.

Q. Please provide an overview of the Companies' historic gas deliveries from FY 2018 through FY 2022.

A. For KEDNY, actual retail gas deliveries have ranged from 1.530 billion therms in FY 2022 to 1.716 billion therms in FY 2019 to all customers, excluding non-core (SC 18-5A Non-Core Transport) and electric generation (SC 18 Small Electric Generator Transport and SC 20 Large Electric Generator Transport) (Exhibit ___ (GLF-1A)). "Retail" refers to gas delivered and metered at the customers' premises, while "wholesale" refers to gas received and metered flowing into the Companies' distribution systems. The range in volumes of actual retail gas deliveries was primarily driven by fluctuations in the weather, such as the colder-than-normal FY 2019 and the warmer-than-normal FY 2020 and FY 2022. On a weather-normalized basis, KEDNY's retail gas deliveries to all customers, excluding non-core and electric generation, have grown at a compound annual growth rate of 0.02 percent per annum from 1.606 billion therms in FY 2018 to 1.607 billion therms in FY 2022 (Exhibit ___

(GLF-8A)). This growth rate reflects the impacts of the COVID-19 pandemic, the current economy, and the volatility of natural gas prices. KEDNY's historic actual billed sales by month and by class for FY 2018 – FY 2022 are provided in Exhibit ___ (GLF-7A). KEDNY's historic weather-normalized billed sales by month and by class for FY 2018 – FY 2022 are provided in Exhibit ___ (GLF-8A).

For KEDLI, actual retail gas deliveries have ranged from 0.985 billion therms to 1.073 billion therms to all customers, excluding small and large electric generation (SC 7 Small Electric Generator Transport and SC 14 Large Electric Generator Transport) (Exhibit ___ (GLF-1B)). Similar to KEDNY, the range in volumes of actual retail gas deliveries for KEDLI was primarily driven by weather fluctuations. On a weather-normalized basis, KEDLI's retail gas deliveries to all customers excluding non-core and electric generation have grown at a compound annual growth rate of 1.2 percent per annum from 1.008 billion therms in FY 2018 to 1.056 billion therms in FY 2022 (Exhibit ___ (GLF-8B)). Similar to KEDNY, this growth rate reflects recovery from the impacts of the COVID-19 pandemic, the economy, and the volatility of natural gas prices. KEDLI's historic actual billed sales by month and by class for FY 2018 – FY 2022 are provided in Exhibit ___ (GLF-7B). KEDLI's historic weather-

normalized billed sales by month and by class for FY 2018 – FY 2022 are provided in Exhibit ___ (GLF-8B).

Q. Please provide an overview of the Companies' historic number of customers from FY 2018 through FY 2022.

A. As shown in Exhibit ___ (GLF-3A), the total number of KEDNY customers, excluding non-core and electric generation, has grown at a compound net growth rate of 0.4 percent from 1,256,309 at year-end FY 2018 to 1,278,589 at year-end FY 2022, or an average annual addition of 5,569 customers per year. Historic customer counts by month and by class are provided in Exhibit ___ (GLF-9A) for KEDNY.

As shown in Exhibit ___ (GLF-3B), the total number of KEDLI customers, excluding small and large electric generation, has grown at a compound net growth rate of 1.0 percent from 597,394 at year-end FY 2018 to 622,574 at year-end FY 2022, or an average annual addition of 6,295 customers per year. Historic customer counts by month and by class are provided in Exhibit ___ (GLF-9B) for KEDLI.

IV. Gas Delivery Forecast

Q. Please describe KEDNY's individual service and revenue class distinctions.

A. KEDNY's gas tariff (PSC No. 12) includes the following active service classifications: SC 1, SC 2, SC 3, SC 4, SC 7, SC 17, SC 18, SC 20, SC 21, and SC22. Certain service classifications contain distinct revenue classes. The revenue classes include Residential Non-Heat, Residential Heat, Commercial Non-Heat, Commercial Heat, and Industrial classes. Powerplants and cogeneration facilities (SC 18 and SC 20) are not included in the sales forecast.

Q. Please describe KEDLI's individual service and revenue class distinctions.

A. KEDLI's gas tariff (PSC No. 1) includes the following active service classifications: SC 1, SC 2, SC 3, SC 5, SC 7, SC 9, SC 14, SC 15, SC 16, SC 17, SC 18, and SC 19. Certain service classifications contain distinct revenue classes. The revenue classes include Residential Non-Heat, Residential Heat, Commercial Non-Heat, Commercial Heat, and Industrial classes. Powerplants and cogeneration facilities (SC 7 and SC 14) are not included in the sales forecast.

Q. Please describe how you derived the delivery forecasts for KEDNY and KEDLI.

A. On an annual basis, the Companies prepare their gas load forecasts based on econometric/statistical forecast models developed for residential, commercial/industrial, and multi-family rate groups. The instant forecasts were based on historical billing data from March 2007 through October 2022.

Although the Companies maintain their customer data at the internal rate code level (48 unique rate codes for KEDNY and 39 unique rate codes for KEDLI), the data from these rate codes were aggregated into six rate groups: Residential Heating, Residential Non-Heating, Commercial, Multi-Family, Non-Firm Demand Response, and Other. By aggregating its data into these six groups, the Companies developed population sets that were large enough for statistical modeling as well as free of variations that are not driven by economic factors. The tables below summarize the service classifications that comprised the rate groups:

KEDNY Rate Groups	
Rate Group	Service Classifications
Residential Heating	SC 1B and SC 17-1B
Residential Non-Heating	SC 1A and SC 17-1A
Commercial	SC 2-1, SC 2-2, SC 17-2-1, and SC 17-2-2
Multi-Family	SC 3 and SC 17-3
Non-Firm Demand Response	SC 22 and SC 18-22
Other	Other

KEDLI Rate Groups	
Rate Group	Service Classifications
Residential Heating	SC 1B and SC 5-1B
Residential Non-Heating	SC 1A and SC 5-1A
Commercial	SC 2A, SC 2B, SC 5-2A, and SC 5-2B
Multi-Family	SC 3 and SC 5-3
Non-Firm Demand Response	SC 18 and SC 19
Other	Other

Two different models were developed for each rate group: (i) a model to forecast the number of active, flowing meters that are generating bills, and (ii) a model to forecast use-per-meter. The Companies' volume forecasts are then the product of number of meters multiplied by the use-per-meter for each rate group. The meter count and use-per-meter models are developed using linear regression techniques and are selected based on econometric best practices (*i.e.* sign and significance of independent variables and the adjusted R-squared of the models after accounting for autocorrelation and heteroscedasticity). The rate group results were then

allocated to the internal rate code level based on the most recent shares of the rate codes to their rate group for each month.

In the number of customer (meter count) models, the independent variables are a combination of time trends and economic variables, such as population, households, employment, and gas and oil prices. In the models calculating use-per-customer, the independent variables are a combination of time trends, heating degree days ("HDD"), and economic variables, such as population, housing stock, income, employment, unemployment, gross domestic product, and gas and oil prices.

KEDNY and KEDLI obtained the historic data and forecasts of the independent economic variables from Moody's, a leading economic research and forecasting firm (November 2022). The Companies obtained historical weather data from the WSI Corporation, whose source data is from the National Oceanic and Atmospheric Administration ("NOAA") and National Weather Service ("NWS"). Retail energy price data was obtained from the following sources: delivered gas prices were taken from Company tariff sheets, state level oil prices are from New York State Energy Research and Development Authority ("NYSERDA") surveys, and state level natural gas and electricity prices were obtained from the

U.S. Department of Energy, Energy Information Administration ("EIA"). The Companies developed the forecast of retail energy prices by escalating historical actuals using the EIA's Short Term Energy Outlook and Annual Energy Outlook energy price projections. As described above, these independent variables were used to develop the econometric models and generate load forecasts.

Q. Please describe how you derived the customer count forecasts.

A. For the meter count (customer count) models, the Companies aggregated monthly meter count data, which is available by internal rate code to the level of the six rate groups. Linear regression analyses were then performed on the six rate groups for each company to develop the meter count models. After completing the meter count modeling, the results were then allocated to the internal rate code level based on the most recent ratios of the various internal rate codes to their rate group. The meter counts were then converted to customer counts based on the rate code average number of meters per customer.

Summary results of the KEDNY models can be found in Exhibit ___(GLF-10A). Summary results of the KEDLI models can be found in Exhibit

___(GLF-10C). The meter count models for each rate group and the data used to derive them are described in more detail below.

Q. Please describe how you derived the use-per-customer forecasts.

A. The historic monthly use-per-customer values were obtained by dividing the total billed therms for each month by the number of billed customers for the month.

For the use-per-customer models, each company aggregated monthly volume data, which is available by internal rate code to the level of the six rate groups, and then divided the volumes by their respective meter counts. Linear regression analyses were then performed on the six rate groups for each company to develop its use-per-customer models. After completing use-per-customer modeling, monthly volumes were calculated from the product of monthly meter count times monthly use-per-customer. The volume results were then allocated to the internal rate code level based on most recent ratios of the various internal rate codes to their rate group.

Summary results of the KEDNY models can be found in Exhibit ___(GLF-10B). Summary results of the KEDLI models can be found in Exhibit

___(GLF-10D). The use-per-customer models for each rate group and the data used to derive them are described in more detail below.

Q. How is the weather variable in the models determined?

A. Weather is a fundamental variable in modeling the natural gas requirements of the Companies' customers. The Companies used gas day (10am – 9am) HDD based on temperature observations from the NWS Central Park, New York City, New York weather station in the models for both KEDNY and KEDLI. Daily HDD are defined as 65 degrees Fahrenheit minus the average daily temperature when the average temperature is lower than 65 degrees Fahrenheit; if the temperature is higher, the daily HDD is defined as zero. For the forecasts, as shown in Exhibit ___ (GLF-11), the Companies defined their normal HDD based on a 30-year average of the period from January 1992 through December 2021 as 4,544 HDD.

For the Companies' modeling and forecasting of retail data, the Companies calculate billing degree days ("BDD"), which are the sum of the daily HDD values from mid-month to mid-month to reflect the lag inherent in billing volumes.

Q. Do the initial forecasts include the impact of demand-side management initiatives and recent changes to local laws/legislation in the Companies' service territories?

A. The Companies' volume forecasts are based on models of meter count and use-per-customer developed for each residential, commercial/industrial, and multi-family rate class. The Companies' historical sales data includes the impact of past demand-side management programs and local laws and legislation (discussed below). The econometric models built from this historical data would reflect these past savings in the forecast horizon but would not reflect any acceleration in demand-side management initiatives or new local laws/legislation expected in next few years. Therefore, as discussed in more detail below, the Companies adjusted the meter count and use-per-customer forecasts for funded energy efficiency programs, heat electrification programs, water heating electrification, as well as the forecast impact of the City of New York Local Laws 154 ("LL154") and 97 ("LL97"), which aim to curtail future gas usage (discussed below in more detail).

Q. Why do the Companies forecasts not account for demand response programs?

A. Demand response programs in KEDNY and KEDLI aim to curtail usage during cold weather and peak periods. These programs specifically target reductions in usage in the morning and early evening hours when demand is at its highest. While these programs are effective at reducing peak gas demand during limited demand response events, overall, they have a negligible impact on the total monthly usage of enrolled customers. Therefore, the Companies consider demand response savings in Design Day forecasts, but not in monthly and annual customer usage forecasts.

Q. How did the Companies adjust the forecasts for sponsored energy efficiency programs?

A. As mentioned previously, the Companies' historical sales data includes the impact of actual energy efficiency savings from past company-sponsored energy efficiency programs. Forecast energy efficiency programs are reflected in the Companies' forecasts as a reduction to the base econometric forecast when the annual incremental savings exceed the average of the most recent three years actual savings to avoid double-counting of reductions due to energy efficiency.

The annual energy efficiency projections are based on the Companies' expected achievement of New Efficiency New York ("NE:NY") goals as well as additional savings from the Annual Demand Side Management ("ADSM") Filing Update made in March 2022 (Cases 19-G-0309 and 19-G-0310) through 2025. These energy efficiency programs are divided into two categories: behavioral and persistent. Behavioral programs, (*e.g.,* mailings to inform customers of their energy consumption patterns), are programs that require annual contact to maintain the reductions expected through outreach. Persistent programs are those programs expected to provide annual reductions once installed throughout the lifetime of the measure (*e.g.,* building weatherization improvements).

Because there are no approved programs or goals after 2025, the Companies made certain assumptions regarding how levels of energy efficiency will continue based on their experience implementing energy efficiency programs and the level of energy efficiency saturation by rate groups. Post-2025, KEDNY and KEDLI's Gross Verified persistent savings level (savings that are calculated after accounting for free ridership) continues to increase by about one percent until the end of the forecast horizon in 2028. Behavioral program contributions to energy efficiency savings through 2025 are based on the expected achievement of

NE:NY targets. Post-2025, behavioral savings decrease year-over-year until the end of the forecast horizon in 2028.

Q. How did the Companies adjust the forecasts based on City of New York Local Law 154?

A. LL154 prohibits installation of gas systems or equipment in newly constructed buildings in the City of New York less than seven stories tall beginning in 2024, and it prohibits such gas use in newly-constructed buildings greater than seven stories beginning in 2027 with exceptions for certain building types (hospitals, restaurants, commercial kitchens, manufacturing, laboratories, laundromats, and power generation). LL154 does not restrict or prohibit oil-to-gas conversions in existing buildings or low-use upgrades to heating.

Given this information, the Companies estimated the percentage of new construction customers in the forecasts that would be affected by LL154 over the forecast horizon. By FY 2028 in KEDNY, about 40 to 50 percent of the forecast annual meter growth in residential, commercial, and multi-family from new construction will be affected by LL154. The Rockaways in Queens, New York is the only area impacted by LL154 in KEDLI's service territory, impacting about three percent of annual meter growth

from new construction in residential, commercial, and multi-family customer groups.

Q. How did the Companies adjust their forecasts for New York City Local Law 97?

A. LL97 sets greenhouse gas ("GHG") emission limits on buildings in the City of New York over 25,000 square feet beginning in 2024. Buildings must report their total square feet and annual use of electricity, natural gas, heating oil, district steam, district hot water, and district chilled water each year. Building emissions intensity is calculated by multiplying the use of each of these fuels by their GHG emission factors (building emissions) and dividing by building square feet. If the actual emissions are greater than the LL97 emissions limits per square foot, building owners must reduce emissions or pay a penalty. Emissions reduction can be achieved through any combination of energy efficiency, fuel switching (oil and steam to gas, oil and steam to electric, gas to full and partial electric), and decarbonization of fuels.

LL97 annual reporting requirements have been in effect since 2017 so that building owners can determine their emissions and take any necessary action before the emission limits begin. The LL97 limits are fixed from

2024 to 2029. Compared to the 2019 emission intensity limits, multi-family and commercial building types, which account for 93 percent of total building gas use, are already well below the 2024 to 2029 limits, on average. Conversely, the Industrial/Manufacturing building type's emission intensity is more than two times over its 2024 limit.

There are multiple pathways that buildings can choose to achieve the LL97 emissions limits based on different combinations of measures. The Companies developed a forecast of gas usage by the LL97 buildings based on the following assumptions:

- Continuation of savings from the Companies' existing and planned energy efficiency programs, including electrification;
- Conversion from oil-to-gas heating in all buildings by 2024;
- Some gas-to-electric conversions from 2024 to 2030; and
- About 90 percent reduction in Industrial/Manufacturing gas use by 2030.

Energy efficiency and electrification savings included in the forecasts drive lower gas use for commercial and multi-family customers. This is enough to keep all commercial and multi-family building types on average below the LL97 emission limits in 2024 and 2030 onwards. Because the

required reductions in gas use are covered by the energy efficiency and electrification projections in the forecast, no adjustment was made to either the commercial class or multi-family forecasts to account for LL97.

The Industrial/Manufacturing sector includes power generators and large manufacturers on special contracts. These are very large non-firm gas customers that do not participate in utility-sponsored energy efficiency programs. To achieve LL97 compliance, this sector must cut existing gas use by about 90 percent by 2030. These amounts were subtracted from "Other" non-firm gas volumes in the forecast.

Q. How did the Companies adjust the forecasts for sponsored heat electrification programs?

A. Because the Companies are not the electric service provider in Downstate New York, the electric distribution companies in the KEDNY and KEDLI service territories – Consolidated Edison Company of New York, Inc. ("Con Edison") and the Long Island Power Authority ("LIPA") (administered by PSEG Long Island, a subsidiary of Public Service Enterprise Group ("PSEG LI")), provided short-term outlooks on electrification projections. The outlooks were used as a foundation to the electrification assumptions utilized in this forecast.

The Companies' electrification forecasts are expressed as heat pump targets (*i.e.,* the number of heat pump installations expected to replace gas service). The forecast considers two kinds of heat pump installations: full and partial. Full heat pump installations are sized to meet the customer's full heating requirements and the existing gas service is decommissioned when the heat pump is installed. The forecast treats each full heat pump installation as a customer loss, both in terms of customer count and associated gas load.

Partial heat pumps are installed with integrated controls connected to the existing gas furnace, which remains in service. The forecast assumes that these heat pumps operate when outside temperatures are above 30 degrees Fahrenheit and switch to the gas system when temperatures are 30 degrees Fahrenheit or lower. Partial heat pumps are not treated as a meter loss in the forecast, but they are reclassified as partial heating customers and their gas usage is reduced by the amount normally used when temperatures are above 30 degrees.

The resulting customer losses from heat electrification programs were compared to customer losses expected from LL154 described above to avoid double counting. An adjustment was made only if KEDNY's

customer losses from Con Edison's electrification programs were greater than KEDNY's customer losses from LL154, as it is assumed that structures impacted by LL154 will take advantage of Con Edison's electrification programs. If the latter was the case, then only the difference between the electrification program and LL154 customer losses was subtracted from the initial customer count forecasts. The same methodology was applied to KEDLI, where the impact of LL154 is minimal.

Q. How did the Companies adjust the forecasts for water heating electrification?

A. In KEDNY, water heating electrification savings were assumed to be captured by Con Edison's space heating savings projections, so no explicit assumptions were made to avoid double counting.

In KEDLI, annual savings due to electrification of water heating were obtained by multiplying PSEG LI's projected number of heat pump water heaters (HPWH) by the average dekatherms/HPWH, which are 8.2 per year. These expected annual savings from the HPWH installations were subtracted from residential class gas volumes in KEDLI.

Q. What is the projected impact of demand-side management initiatives and local laws on the forecast customer counts in KEDNY?

A. The customer count forecasts reflect the impact of both full electrification from Con Edison's demand-side management programs and LL154. As described above, full electrification occurs when a customer decommissions its gas system and installs a heat pump that can meet the customer's entire load. LL154 prohibits some new construction from installing gas systems beginning in 2024, but, as noted above, there are several exemptions in the legislation. A net adjustment was made to KEDNY's customer count for demand-side management electrification only if the projected heat pump installations were greater than KEDNY's customer losses from LL154.

By the end of FY 2028, electrification from LL154 and demand side management programs decrease the total meter count by 0.8 percent, or 10,265 meters. Residential heating customers account for 78.3 percent of the total meter loss from electrification (Exhibit ___ (GLF-15A)).

Q. What is the projected impact of demand-side management initiatives and local laws on the forecast volumes in KEDNY?

A. The forecast retail volumes are impacted by full electrification, partial electrification, LL97 and LL154, and acceleration in the Companies' energy efficiency programs. By FY 2028, these factors reduced projected retail volumes by 115.6 million therms (Exhibit ___ (GLF-16A)).

The largest impact on retail volumes comes from projected savings from the KEDNY's energy efficiency initiatives at 41.6 million therms through FY 2028. It is important to note that this impact reflects only the savings above the historical trend of energy efficiency that is built into KEDNY's historical sales data. Meter loss from demand-side management electrification and LL154 have the second largest impact at 34.6 million therms by FY 2028. LL97 reduces special contract (Other rate group) customers' load by 30.0 million therms by FY 2028 to ensure these customers, on average, comply with emission limits. Lastly, partial electrification results in 9.4 million therms in savings by FY 2028 (Exhibit ___ (GLF-16A)).

Q. What is the projected impact of demand-side management initiatives and local laws on the forecast customer counts in KEDLI?

A. The customer count forecasts reflect the impact of both full electrification from PSEG LI's demand-side management programs and LL154. As described above, full electrification results when a customer decommissions its gas system and installs a heat pump that can meet the customer's entire load. LL154 prohibits some new construction from installing gas systems beginning in 2024, but, as noted above, there are several exemptions in the legislation. LL154 also only applies to a small part of the KEDLI territory in the Rockaways, so the impact is much smaller than in KEDNY. A net adjustment was made to KEDLI's customer count for demand-side management electrification only if the projected heat pump installations were greater than KEDLI's customer losses from LL154.

By the end of FY 2028, electrification from LL154 and demand side management programs decrease the total meter count by 0.03 percent, or 202 meters. PSEG-LI's electrification projections call for larger amounts of partial heat pumps compared to full heat pumps, resulting in lower meter loss from electrification in KEDLI as compared to KEDNY. Furthermore, the majority of full electrification is projected to occur post-2030.

Q. What is the projected impact of demand-side management initiatives and local laws on the forecast volumes in KEDLI?

A. The forecast retail volumes are impacted by full electrification, partial electrification, water heating electrification, LL97 and LL154, acceleration in the KEDLI's energy efficiency programs. By FY 2028, these factors reduce projected retail volumes by 37.0 million therms (Exhibit ___ (GLF-16B)).

The largest impact on retail volumes comes from projected savings from KEDLI's energy efficiency initiatives at 29.5 million therms through FY 2028. It is important to note that this impact reflects only the savings above the historical trend of energy efficiency that is built into the KEDLI's historical sales data. Partial electrification has the second largest impact at 5.6 million therms by FY 2028. LL97 reduces customers' load on special contracts (Other rate group) by 1.2 million therms in FY 2028 to ensure these customers comply with emission limits on average. Water heating electrification reduces load by 0.4 million therms by FY 2028. Lastly, full electrification from PSEG LI's demand-side management program and LL154 reduce load further by 0.3 million therms in FY 2028 (Exhibit ___ (GLF-16B)).

Q. Has the forecast methodology that you described been used previously by the Companies?

A. Yes. Econometric forecasting has been used by KEDLI and KEDNY for business, gas resource, and infrastructure planning for years, and was used in the 2016 and 2019 KEDNY and KEDLI Rate Cases. The general methodology has not changed, but there have been three primary enhancements in the Companies' forecasting process since the 2016 and 2019 KEDNY and KEDLI Rate Cases. These enhancements are improved model specifications and frequency of input data, the consideration of more exogenous factors that impact load, and the addition of market saturation limits.

The Companies' econometric models for meter count and use per customer are now based on monthly billing data instead of constructed quarterly data. Furthermore, the peak and off-peak use per customer is no longer forecast with separate econometric models. These two changes to the forecast frequency and modelling specification allow for more accurate modelling, especially in the peak period.

The Companies also modeled the impact of all known, relevant, and quantifiable exogenous factors that could affect load or customer count.

This includes existing or already-filed demand-side management programs and public policies that have a clear path to implementation during the period of its forecasts. The relevant factors, described above, were expanded from what was considered in the 2016 and 2019 KEDNY and KEDLI Rate Cases, to include the impact of energy efficiency, electrification initiatives, LL154, and LL97.

The Companies also considered two types of market saturation that limit customer growth in certain rate groups. The first saturation limit is on the expected number of residential non-heating to heating conversions. The second saturation assumption imposes restriction on residential, commercial, and multi-family growth from off-system conversions. The market saturation limits do not begin to impact customer counts until after 2030, but were considered for completeness.

Q. Please describe the annual forecast deliveries and the year-end customer count forecasts for KEDNY.

A. As shown in Exhibit ___ (GLF-4A), KEDNY's forecast of retail gas deliveries (excluding non-core and electric generation volumes) is 1.670 billion therms in FY 2023, rising to 1.721 billion therms in FY 2028.

Natural gas deliveries are projected to increase by 10.1 million therms per year or a compound annual growth rate of 0.60 percent per annum.

As shown in Exhibit ___ (GLF-5A), KEDNY's forecast year-end customer count (excluding non-core and electric generation) is 1,279,667 in FY 2023, rising to 1,294,514 in FY 2028. Net meter counts are projected to increase by 2,969 meters per year or a compound annual growth rate of 0.23 percent per annum.

Q. Please describe the annual forecast deliveries and the year-end customer count forecasts for KEDLI.

A. As shown in Exhibit ___ (GLF-4B), KEDLI's forecast of retail gas deliveries (excluding non-core and large electric generation) is 1.104 billion therms in FY 2023, rising to 1.181 billion therms in FY 2028. Natural gas deliveries are projected to increase by 15.450 million therms per year or a compound annual growth rate of 1.36 percent per annum.

As shown in Exhibit ___ (GLF-5B), KEDLI's forecast year-end customer count (excluding non-core and electric generation) is 628,222 in FY 2023, rising to 661,034 in FY 2028. Net meter counts are projected to increase

by 6,562 meters per year or a compound annual growth rate of 1.02 percent per annum.

Q. Please summarize the Moody's Analytics economic forecast for Downstate New York that was used in the delivery forecast.

A. For KEDNY, population is projected to decrease by 0.04 percent per annum over the period from the end of FY 2023 to the end of FY 2028, which is a slower rate of decline than that seen historically from the end of FY 2018 to the end of FY 2022 of 0.36 percent. While population is projected to slightly decline in the forecast horizon, the housing stock in Downstate New York is still projected to grow. For KEDNY, housing stock is projected to increase by 0.34 percent per annum over the period from the end of FY 2023 to the end of FY 2028, which is similar to the historical rate of 0.32 percent from the end of FY 2018 to the end of FY 2022 (Exhibit ___ (GLF-6A-Econ)).

The per capita personal income (in 2009 dollars) for residents in KEDNY's service territory is projected to increase by 1.91 percent per annum over the period from the end of FY 2023 to the end of FY 2028, which is similar to the historical growth rate of 1.99 percent seen from the end of FY 2018 to the end of FY 2022 (Exhibit ___ (GLF-6A-Econ)). Natural gas prices

are projected to remain lower than oil prices in the future winter seasons. The average residential natural gas-to-oil price ratio projected from FY 2023 to FY 2028 is 0.53. (Exhibit ___ (GLF-6A-Prices)).

For KEDLI, population is projected to decrease by 0.20 percent per annum over the period from the end of FY 2023 to the end of FY 2028, which is similar rate of decline seen historically from the end of FY 2018 to the end of FY 2022 of 0.19 percent. Like KEDNY, the housing stock in KEDLI is projected to increase by 0.26 percent per annum over the period from the end of FY 2023 to the end of FY 2028, which is slightly higher than the historical rate of 0.18 percent from the end of FY 2018 to the end of FY 2022 (Exhibit ___ (GLF-6B-Econ)).

The per capita personal income (in 2009 dollars) for residents in KEDLI's service territory is projected to increase by 1.65 percent per annum over the period from the end of FY 2023 to the end of FY 2028, which is a higher than the historical growth rate of 1.16 percent seen from the end of FY 2018 to the end of FY 2022 (Exhibit ___ (GLF-6B-Econ)). Natural gas prices are projected to remain lower than oil prices in the future winter seasons. The average residential natural gas-to-oil price ratio from FY 2023 to FY 2028 is 0.50. (Exhibit ___ (GLF-6B-Prices)).

Q. Please explain how KEDNY's rate groups were modeled.

A. Four rate groups (Residential Non-Heating, Residential Heating, Multi-Family, and Commercial) represent 88 percent of the KEDNY retail volumes excluding non-core and electric generation customers in FY 2022. Two rate groups (Non-firm Demand Response and Other) account for the remaining 12 percent.

1. KEDNY Residential Non-Heating

KEDNY Residential Non-Heating Meter Counts

In KEDNY, SC 1A Residential Non Heat Sales and SC 17-1A Residential Non Heat Transport classes alone accounted for 475,985 customers at FY-end 2022, or 37.2 percent of total customers, excluding non-core and electric generation (Exhibit ___ (GLF-3A)). SC 1A Residential Non Heat Sales and SC 17-1A Residential Non Heat Transport customers combined are projected to decrease to 464,378 customers at FY-end 2028 (Exhibit ___ (GLF-5A)).

Given that this historical meter count data is highly linear, the time variable was most appropriate as the data reflects a market not driven by economic factors, but a constrained market where the non-heating customers are converting to heating at a fixed rate (Exhibit ___ (GLF-10A)). This can

be due to failure rate of their existing non-gas-fired heating equipment over time.

KEDNY Residential Non-Heating Use per Customer

In KEDNY, SC 1A Residential Non Heat Sales normalized use-per-customer was 81 therms per year in FY 2022 (Exhibit ___ (GLF-13A)). SC 17-1A Residential Non Heat Transport normalized use-per-customer was 286 therms per year in FY 2022 (Exhibit ___ (GLF-13A)).

For FY 2028, SC 1A Residential Non Heat Sales normalized use-per-customer is projected to slightly increase to 82 therms per year and SC 17-1A Residential Non Heat Transport normalized use-per-customer is projected to increase to 359 therms per year (Exhibit ___ (GLF-14A)).

The KEDNY residential non-heating use-per customer was found to be positively related to billing degree days, meaning non-space heating usages such as water heating and cooking, are primarily driven by temperature and not economic trends (Exhibit ___ (GLF-10B)).

KEDNY Residential Non-Heating Volumes

The results of the customer count forecasts and the use-per-customer forecasts were then multiplied to derive the volume delivery forecast presented in Exhibit ___ (GLF-4A). In KEDNY, SC 1A Residential Non Heat Sales and SC 17-1A Residential Non Heat Transport normalized volumes alone accounted for 0.048 billion therms in FY 2022, or 3.0 percent of total normalized volume, excluding non-core and electric generation (Exhibit ___ (GLF-8A)). Volumes from these two rate classes are projected to stay at 0.048 billion therms in FY 2028 on a normalized basis (Exhibit ___ (GLF-4A)).

2. KEDNY Residential Heating

KEDNY Residential Heating Meter Counts

In KEDNY, SC 1B Residential Heating and SC 17-1B Residential Heating Transport classes alone accounted for 577,539 customers at FY-end 2022, or 45.2 percent of total customers, excluding non-core and electric generation (Exhibit ___ (GLF-3A)). SC 1B Residential Heating and SC 17-1B Residential Heating Transport classes combined are projected to increase to 609,215 customers at FY-end 2028 (Exhibit ___ (GLF-5A)). KEDNY's residential heating meter counts were modeled as a function of housing stock (Exhibit ___ (GLF-10A)).

KEDNY Residential Heating Use per Customer

In KEDNY, SC 1B Residential Heating normalized use-per-customer was 1,120 therms per year in FY 2022 (Exhibit ___ (GLF-13A)). SC 17-1B Residential Heating Transport normalized use-per-customer was 1,451 therms per year in FY 2022 (Exhibit ___ (GLF-13A)). For FY 2028, SC 1B Residential Heating normalized use-per-customer is projected to slightly decrease to 1,102 therms per year (Exhibit GLF-14A). SC 17-1B Residential Heating Transport normalized use-per-customer is projected to increase to 2,106 therms per year in FY 2028 (Exhibit ___ (GLF-14A)). The KEDNY residential heating use-per customer was found to be positively related to billing degree days, meaning usage is primarily driven by weather (Exhibit ___ (GLF-10B)).

KEDNY Residential Heating Volumes

The results of the customer count forecasts and the use-per-customer forecasts were then multiplied to derive the volume delivery forecast presented in Exhibit ___ (GLF-4A). In KEDNY, SC 1B Residential Heating and SC 17-1B Residential Heating Transport normalized volumes alone accounted for 0.66 billion therms in FY 2022, or 41.2 percent of total normalized volume, excluding non-core and electric generation (Exhibit ___ (GLF-8A)). SC 1B Residential Heating and SC 17-1B Residential

Heating Transport volumes are projected to increase to 0.71 billion therms in FY 2028 on a normalized basis (Exhibit ___ (GLF-4A)).

3. KEDNY Multi-Family

KEDNY Multi-Family Meter Counts

In KEDNY, SC 3 Multi-Family Sales and SC 17-3 Multi-Family Transport classes accounted for 19,458 customers at FY-end 2022, or 1.5 percent of total customers, excluding non-core and electric generation (Exhibit ___ (GLF-3A)). Combined, these classes are projected to increase to 19,931 customers at FY-end 2028 (Exhibit ___ (GLF-5A)). KEDNY's multi-family heating meter counts were modeled as a function of multi-family housing stock and number of households (Exhibit ___ (GLF-10A)).

KEDNY Multi-Family Use per Customer

In KEDNY, SC 3 Multi-Family Sales normalized use-per-customer was 9,196 therms per year in FY 2022 (Exhibit ___ (GLF-13A)). For FY 2028, its normalized use-per-customer is projected to increase to 9,782 therms per year (Exhibit ___ (GLF-14A)).

SC 17-3 Multi-Family Transport normalized use-per-customer was 33,671 therms per year in fiscal year 2022 (Exhibit ___ (GLF-13A)). For fiscal

year 2028, its normalized use-per-customer is projected to increase to 40,701 therms per year (Exhibit ___ (GLF-14A)).

The KEDNY multi-family use-per customer was found to be positively related to billing degree days and personal income (Exhibit ___ (GLF-10B)).

KEDNY Multi-Family Volumes

The results of the customer count forecasts and the use-per-customer forecasts were multiplied to derive the volume delivery forecast presented in Exhibit ___ (GLF-4A). In KEDNY, SC 3 Multi-Family Sales and SC 17-3 Multi-Family Transport normalized volumes accounted for 0.35 billion therms in FY 2022, or 21.8 percent of total normalized volume, excluding non-core and electric generation (Exhibit ___ (GLF-8A)). Combined, these volumes are projected to increase to 0.40 billion therms in FY 2028 on a normalized basis (Exhibit ___ (GLF-4A)).

4. KEDNY Commercial

KEDNY Commercial Meter Counts

In KEDNY, SC 2-1 Non-Residential Non-Heat Sales, SC 2-2 Non-Residential Heat Sales, SC 17-2-1 Non-Residential Non-Heat Transport,

and SC 17-2-2 Non-Residential Heat Transport classes alone accounted for 52,606 customers at FY-end 2022, or 4.1 percent of total customers, excluding non-core and electric generation (Exhibit ___ (GLF-3A)). Combined, these classes are projected to increase to 53,636 customers at FY-end 2028 (Exhibit ___ (GLF-5A)). KEDNY's commercial meter counts were modeled as a function of population and non-manufacturing employment (Exhibit ___ (GLF-10A)).

<u>KEDNY Commercial Use per Customer</u>

In KEDNY, SC 2-1 Non-Residential Non-Heat Sales normalized use-per-customer was 4,013 therms per year in FY 2022 (Exhibit ___ (GLF-13A)). For FY 2028, its normalized use-per-customer is projected to increase to 5,554 therms per year (Exhibit ___ (GLF-14A)).

SC 2-2 Non-Residential Heat Sales normalized use-per-customer was 4,305 therms per year in FY 2022 (Exhibit ___ (GLF-13A)). For FY 2028, its normalized use-per-customer is projected to decrease slightly to 4,297 therms per year (Exhibit ___ (GLF-14A)).

SC 17-2-1 Non-Residential Non-Heat Transport normalized use-per-customer was 10,745 therms per year in FY 2022 (Exhibit ___ (GLF-

13A)). For FY 2028, its normalized use-per-customer is projected to increase to 13,990 therms per year (Exhibit ___ (GLF-14A)).

SC 17-2-2 Non Residential Heat Transport normalized use-per-customer was 8,822 therms per year in FY 2022 (Exhibit ___ (GLF-13A)). For FY 2028, its normalized use-per-customer is projected to decrease to 8,547 therms per year (Exhibit ___ (GLF-14A)).

The KEDNY commercial use-per customer was found to be positively related to both billing degree days and gross domestic product (Exhibit ___ (GLF-10B)).

<u>KEDNY Commercial Volumes</u>

The results of the customer count forecasts and the use-per-customer forecasts were then multiplied to derive the volume delivery forecast presented in Exhibit ___ (GLF-4A). In KEDNY, SC 2-1 Non-Residential Non-Heat Sales, SC 2-2 Non-Residential Heat Sales, SC 17-2-1 Non-Residential Non-Heat Transport, and SC 17-2-2 Non-Residential Heat Transport normalized volumes accounted for 0.28 billion therms in FY 2022, or 17.3 percent of total volume, excluding non-core and electric generation (Exhibit ___ (GLF-8A)). Combined, these volumes are

projected to increase to 0.31 billion therms in FY 2028 on a normalized basis (Exhibit ___ (GLF-4A)).

Q. Please explain how KEDLI's rate groups were modeled.

A. Four rate groups (Residential Non-Heating, Residential Heating, Multi-Family, and Commercial) represent 99 percent of the KEDLI retail volumes excluding non-core and electric generation customers in FY 2022. Two rate groups (Non-firm Demand Response and Other) account for the remaining one percent.

1. KEDLI Residential Non-Heating

KEDLI Residential Non-Heating Meter Counts

In KEDLI, SC 1A Residential General Sales, SC 1A Water Heat Sales, SC 5-1A Residential General Transport, and SC 5-1A Water Heat Transport classes alone accounted for 81,236 customers at FY-end 2022, or 13.0 percent of total customers, excluding non-core and electric generation (Exhibit ___ (GLF-3B)). SC 1A Residential General Sales, SC 1A Water Heat Sales, SC 5-1A Residential General, and SC 5-1A Water Heat Transport classes combined are projected to decrease to 58,654 customers at FY-end 2028 (Exhibit ___ (GLF-5B)).

Given that this historical meter count data is highly linear, the time variable was most appropriate as the data reflects a market not driven by economic factors, but a constrained market where the non-heating customers are converting to heating at a fixed rate (Exhibit ___ (GLF-10C)). This can be due to failure rate of their existing non-gas-fired heating equipment over time.

<u>KEDLI Residential Non-Heating Use per Customer</u>

In KEDLI, SC 1A Residential General Sales normalized use-per-customer was 132 therms per year in FY 2022 (Exhibit ___ (GLF-13B)). For FY 2028, SC 1A Residential General Sales normalized use-per-customer is projected to increase to 149 therms per year (Exhibit ___ (GLF-14B)).

SC 1A Residential Water Heat Sales normalized use-per-customer was 327 therms per year in FY 2022 (Exhibit ___ (GLF-13B)). For FY 2028, SC 1A Residential Water Heat Sales normalized use-per-customer is projected to increase to 372 therms per year (Exhibit ___ (GLF-14B)).

SC 5-1A Residential General Transport use-per-customer was 135 therms per year in FY 2022 (Exhibit ___ (GLF-13B)). For FY 2028, SC 5-1A

Residential General Transport normalized use-per-customer is projected to increase to 205 therms per year (Exhibit ___ (GLF-14B)).

SC 5-1A Residential Water Heat Transport use-per-customer was 346 therms per year in FY 2022 (Exhibit ____ (GLF-13B)). For FY 2028, SC 5-1A Residential Water Heat Transport normalized use-per-customer is projected to increase to 543 therms per year (Exhibit ___ (GLF-14B)).

The KEDLI residential non-heating use-per customer was found to be positively related to billing degree days, meaning non-heating usages such as water heating and cooking are primarily driven by temperature and not economic trends (Exhibit ___ (GLF-10D)).

<u>KEDLI Residential Non-Heating Volumes</u>

The results of the customer count forecasts and the use-per-customer forecasts were multiplied together to derive the volume delivery forecast presented in Exhibit ___ (GLF-4B). In KEDLI, SC 1A Residential General, SC 1A Water Heat Sales, SC 5-1A Residential General, and SC 5-1A Water Heat Transport normalized volumes alone accounted for 0.016 billion therms in FY 2022, or 1.5 percent of total volume, excluding non-core and electric generation (Exhibit ___ (GLF-8B)). SC 1A Residential

General, SC 1A Water Heat Sales, SC 5-1A Residential General, and SC 5-1A Water Heat Transport volumes are projected to decrease to 0.013 billion therms in FY 2028 on a normalized basis (Exhibit ___ (GLF-4B)).

2. KEDLI Residential Heating

KEDLI Residential Heating Meter Counts

In KEDLI, SC 1B Residential Space Heat Sales and SC 5-1B Residential Space Heat Transport classes alone accounted for 466,165 customers at FY-end 2022, or 74.9 percent of total customers, excluding non-core and electric generation (Exhibit ___ (GLF-3B)). SC 1B Residential Space Heat Sales and SC 5-1B Residential Space Heat Transport classes combined are projected to increase to 521,069 customers at FY-end 2028 (Exhibit ___ (GLF-5B)).

KEDLI's residential heating meter count was found to be positively related to number of households and time (Exhibit ___ (GLF-10C)).

KEDLI Residential Heating Use per Customer

In KEDLI, SC 1B Residential Space Heat Sales normalized use-per-customer was 1,199 therms per year in FY 2022 (Exhibit ___ (GLF-13B)). SC 5-1B Residential Space Heat Transport normalized use-per-customer

was 1,483 therms per year in FY 2022 (Exhibit ___ (GLF-13B)). For fiscal year 2028, SC 1B Residential Space Heat Sales normalized use-per-customer is projected to slightly decrease to 1,176 therms per year (Exhibit ___ (GLF-14B)). SC 5-1B Residential Space Heat Transport normalized use-per-customer is projected to increase to 2,036 therms per year in FY 2028 (Exhibit ___ (GLF-14B)).

KEDLI's residential heating use-per customer was found to be positively related to billing degree days alone (Exhibit ___ (GLF-10D)).

<u>KEDLI Residential Heating Volumes</u>

The results of the customer count forecasts and the use-per-customer forecasts were then multiplied together to derive the volume delivery forecast presented in Exhibit ___ (GLF-4B). In KEDLI, SC 1B Residential Space Heat Sales and SC 5-1B Residential Space Heat Transport normalized volumes alone accounted for 0.563 billion therms in FY 2022, or 53.3 percent of total volume, excluding non-core and electric generation (Exhibit ___ (GLF-8B)). SC 1B Residential Space Heat Sales and SC 5-1B Residential Space Heat Transport volumes are projected to increase to 0.625 billion therms in FY 2028 on a normalized basis (Exhibit ___ (GLF-4B)).

3. KEDLI Multi-Family

KEDLI Multi-Family Meter Counts

In KEDLI, SC 3A Multi-Family Non-Heat Sales, SC 3B Multi-Family Heat Sales, SC 5-3A Multi-Family Non-Heat Transport, and SC 5-3B Multi-Family Heat Transport classes accounted for 1,750 customers at FY-end 2022, or 0.3 percent of total customers, excluding non-core and electric generation (Exhibit ___ (GLF-3B)). Combined, these classes are projected to increase to 1,849 customers at FY-end 2028 (Exhibit ___ (GLF-5B)).

KEDLI's multi-family meter count was found to be positively related to time and households (Exhibit ___ (GLF-10C)).

KEDLI Multi-Family Use Per Customer

In KEDLI, SC 3A Multi-Family Non-Heat Sales normalized use-per-customer was 6,513 therms per year in FY 2022 (Exhibit ___ (GLF-13B)). For FY 2028, its normalized use-per-customer is projected to decrease to 5,472 therms per year (Exhibit ___ (GLF-14B)).

SC 3B Multi-Family Heat Sales normalized use-per-customer was 21,723 therms per year in FY 2022 (Exhibit ___ (GLF-13B)). For FY 2028, its

normalized use-per-customer is projected to decrease slightly to 21,221 therms per year (Exhibit ___ (GLF-14B)).

SC 5-3A Multi-Family Non-Heat Transport normalized use-per-customer was 16,658 therms per year in FY 2022 (Exhibit ___ (GLF-13B)). For FY 2028, its normalized use-per-customer is projected to increase to 21,953 therms per year (Exhibit ___ (GLF-14B)).

SC 5-3B Multi-Family Heat Transport normalized use-per-customer was 34,853 therms per year in FY 2022 (Exhibit ___ (GLF-13B)). For FY 2028, its normalized use-per-customer is projected to increase to 36,341 therms per year (Exhibit ___ (GLF-14B)).

The KEDLI multi-family use-per-customer was found to be positively related to billing degree days (Exhibit ___ (GLF-10D)).

<u>KEDLI Multi-Family Volumes</u>

The results of the customer count forecasts and the use-per-customer forecasts were then multiplied to derive the volume delivery forecast presented in Exhibit ___ (GLF-4B). In KEDLI, SC 3A Multi-Family Non-Heat Sales, SC 3B Multi-Family Heat Sales, SC 5-3A Multi-Family Non-

Heat Transport, and SC 5-3B Multi-Family Heat Transport normalized volumes accounted for 0.050 billion therms in FY 2022, or 4.7 percent of total volume, excluding non-core and electric generation (Exhibit ___ (GLF-8B)). Combined, these volumes are projected to increase to 0.053 billion therms in FY 2028 on a normalized basis (Exhibit ___ (GLF-4B)).

4. KEDLI Commercial

KEDLI Commercial Meter Counts

In KEDLI, SC 2A Non-Residential Water Heat Sales, SC 2A Non-Residential General Sales, SC 2B Non-Residential Space Heat Sales, SC 5-2A Non-Residential Water Heat Transport, SC 5-2A Non-Residential General Transport, and SC 5-2B Non-Residential Space Heat Transport classes alone accounted for 61,009 customers at FY-end 2022, or 9.8 percent of total customers excluding non-core and electric generation (Exhibit ___ (GLF-3B)). Combined, these classes are projected to increase to 64,158 customers at FY-end 2028 (Exhibit ___ (GLF-5B)).

KEDLI's commercial meter count was found to be positively related to multi-family housing stock (Exhibit ___ (GLF-10C)).

KEDLI Commercial Use per Customer

In KEDLI, SC 2A Non-Residential Water Heat Sales normalized use-per-customer was 1,424 therms per year in FY 2022 (Exhibit ___ (GLF-13B)). For FY 2028, its normalized use-per-customer is projected to increase to 1,633 therms per year (Exhibit ___ (GLF-14B)).

SC 2A Non-Residential General Sales normalized use-per-customer was 5,865 therms per year in FY 2022 (Exhibit ___ (GLF-13B)). For FY 2028, its normalized use-per-customer is projected to increase to 6,244 therms per year (Exhibit ___ (GLF-14B)).

SC 2B Non-Residential Space Heat Sales normalized use-per-customer was 4,167 therms per year in FY 2022 (Exhibit ___ (GLF-13B)). For FY 2028, its normalized use-per-customer is projected to increase slightly to 4,185 therms per year (Exhibit ___ (GLF-14B)).

SC 5-2A Non-Residential Water Heat Transport normalized use-per-customer was 27,037 therms per year in FY 2022 (Exhibit ___ (GLF-13B)). For FY 2028, its normalized use-per-customer is projected to decrease to 26,192 therms per year (Exhibit ___ (GLF-14B)).

SC 5-2A Non-Residential General Transport normalized use-per-customer was 17,674 therms per year in FY 2022 (Exhibit ___ (GLF-13B)). For FY 2028, its normalized use-per-customer is projected to increase to 21,560 therms per year (Exhibit ___ (GLF-14B)).

SC 5-2B Non-Residential Space Heat Transport normalized use-per-customer was 10,480 therms per year in FY 2022 (Exhibit ___ (GLF-13B)). For FY 2028, its normalized use-per-customer is projected to increase to 13,752 therms per year (Exhibit ___ (GLF-14B)).

KEDLI's commercial use-per-customer was found to be positively related to billing degree days and time in the peak usage (Exhibit ___ (GLF-10D)).

<u>KEDLI Commercial Volumes</u>

The results of the customer count forecasts and the use-per-customer forecasts were then multiplied together to derive the volume delivery forecast presented in Exhibit ___ (GLF-4B). In KEDLI, SC 2A Non-Residential Water Heat Sales, SC 2A Non-Residential General Sales, SC 2B Non-Residential Space Heat Sales, SC 5-2A Non-Residential Water Heat Transport, SC 5-2A Non-Residential General Transport, and SC 5-2B Non-Residential Space Heat Transport normalized volumes accounted for

0.351 billion therms in FY 2022, or 33.2 percent of total volume excluding non-core and electric generation (Exhibit ___ (GLF-8B)). Combined, these volumes are projected to increase to 0.400 billion therms in FY 2028 on a normalized basis (Exhibit ___ (GLF-4B)).

V. Conclusion

Q. Does this conclude your testimony?

A. Yes, it does.
