I. Introduction and Qualifications

Q. Please identify the members of the Rate Design Panel.

A. The Rate Design Panel ("Panel") consists of Kellie I. Smith, Dawn M. Herrity, Melissa M. Barnes, and Howard S. Gorman. The Panel is testifying on behalf of The Brooklyn Union Gas Company d/b/a National Grid NY ("KEDNY" or the "Company").

Q. Ms. Smith, please state your name and business address.

A. My name is Kellie I. Smith and my business address is 300 Erie Boulevard West, Syracuse, New York 13202.

Q. By whom are you employed and in what capacity?

A. I am employed by National Grid USA Service Company, Inc. ("National Grid Service Company"), a subsidiary of National Grid USA ("National Grid"), as Director of New York Pricing. I am responsible for supervising the study, analysis, and design of delivery service rates, rate contracts, surcharge adjustment factors, riders, and terms and condition of service for National Grid's three New York gas utilities, KEDNY, KeySpan Gas East Corporation d/b/a National Grid ("KEDLI"), and Niagara Mohawk Power Corporation ("NMPC").

Q. Please describe your educational background.

A. In 1994, I graduated from SUNY Oswego with a Bachelor of Science in Accounting and in 2000, I received my Master of Business Administration from LeMoyne College.

Q. What is your professional background?

A. In 2000, I was hired by National Grid as a Senior Financial Analyst in Planning and Financial Analysis with responsibilities including the preparation of monthly margin reports, monthly revenue analysis and annual budget preparation. In 2006, I took the position of Senior Analyst in NY Electric Pricing and was subsequently promoted to Lead Analyst where my responsibilities included monthly and annual surcharge reconciliations, rate design, cost and regulatory analysis, and tariff revisions. I was hired as the Manager of NY Gas Pricing in 2015 with the responsibility of supervising the study, analysis and design of retail gas delivery rates, interpretation and application of retail gas tariffs, and rate case development. In 2019, I took my current position as Director of NY Pricing where I am responsible for the oversight of the study, analysis and design of delivery service rates, rate contracts, surcharges, and terms and condition of service for National Grid's three New York State utilities, including KEDNY, KEDLI, and NMPC.

Q. Have you previously testified before a regulatory commission?

A. Yes. I have testified before the Commission in Case 12-E-0201 - NMPC's 2012 electric rate case, Case 17-G-0239 - NMPC's 2017 gas rate case, Cases 19-G-0309 and 19-G-0310 (the "2019 KEDNY and KEDLI Rate Cases"), and Cases 20-E-0380 and 20-G-0381 (the "2020 NMPC Rate Case").

Q. Ms. Herrity, please state your name and business address.

A. My name is Dawn M. Herrity and my business address is 2 Hanson Place, Brooklyn, New York 11217.

Q. By whom are you employed and in what capacity?

A. I am employed by National Grid Service Company as Principal Program Manager of New York Gas Pricing. I am responsible for the management of the non-firm demand response programs, tariff compliance, and customer violations for KEDNY, KEDLI, and NMPC. In addition, I serve as the regulatory liaison for escalated customer complaints and various customer-related issues regarding tariff rules and regulations. I also support regulatory affairs with regards to stakeholder outreach for rate cases and other regulatory initiatives.

Q. Please describe your professional background.

A. I was hired by National Grid in November 1984 as an Administrative and Research Assistant in the Rates Department where I prepared regulatory filings. In September 1990, I was named the budget coordinator of the department and was responsible for monthly/annual variance reporting, as well as developing upcoming budget year dollars and justification. I was promoted to Tariff Administrator in January 1992 and was responsible for the maintenance and updating of KEDNY's tariff. In August 1995, I was promoted to Analyst. My tasks included providing Marketing and Sales with various rate analyses, price trends, and customer suggestions. In April 2000, I was promoted to Senior Analyst where I was responsible for the development of market-based competitive pricing such as temperature controlled rates and natural gas vehicle rates. In October 2005, I was promoted to Lead Analyst where I collaborated with various internal teams to develop and implement rate case/merger strategies, including revenue decoupling. In September 2011, I was promoted to Manager of the Analytical Center of Excellence ("ACE"), where I provided interpretation (internally and externally) of the three gas companies' tariffs, as well as ensured compliance of those tariffs. In July 2014, I was promoted to my current role as Principal Program Manager.

Q. Have you previously testified before a regulatory commission?

A. Yes. I have testified before the Commission in Case 12-G-0202 – NMPC's 2012 gas rate case, Cases 16-G-0058 and 16-G-0059 (the "2016 KEDNY and KEDLI Rate Cases"), and the 2019 KEDNY and KEDLI Rate Cases.

Q. Ms. Barnes, please state your name and business address.

A. My name is Melissa M. Barnes and my business address is 300 Erie Boulevard West, Syracuse, New York 13202.

Q. By whom are you employed and in what capacity?

A. I am employed by National Grid Service Company as Manager of New York Gas Pricing. I am responsible for supervising the study, analysis, and design of delivery service rates, rate contracts, surcharge adjustment factors, riders, and terms and condition of service for KEDLI, KEDNY, and NMPC.

Q. Please describe your educational background.

A. In 1996, I graduated from Utica College of Syracuse University with a Bachelor of Science in Accounting/CPA.

Q. Please describe your professional background.

A. In 2003, I was hired by National Grid Service Company as a Senior Internal Auditor, with responsibilities for performance of various operational and financial internal audits. In 2007, I took the position of Senior Analyst for Rhode Island Special Billing, where I prepared and reviewed customer bills, and maintained the billing system with the appropriate effective rates and customer contract terms. In 2008, I took the position of Senior Analyst of the New York Electric Pricing team and was later promoted to Lead Analyst. My responsibilities as Lead Analyst included the development of NMPC's electric retail revenue forecasts filed in various rate case proceedings, accounting support for various regulatory deferrals, rate design, and discovery responses. In October 2014, I took the position of Lead Analyst on the New York Revenue Requirements team. In this position I supported the various components of NMPC, KEDLI and KEDNY's cost of service and the development of the revenue requirements included in various rate case proceedings. In September 2019, I assumed my current position as the New York Gas Pricing manager.

Q. Have you previously testified before a regulatory commission?

A. Yes. I have testified before the Commission in the 2020 NMPC Rate Case.

Q. Mr. Gorman, please state your name and business address.

A. My name is Howard S. Gorman and my business address is 45 Hillpark Avenue, Great Neck, New York 11021.

Q. By whom are you employed and in what capacity?

A. I am the President of HSG Group, Inc., a consulting firm specializing in utility rate and regulatory matters.

Q. Please describe your educational background.

A. In 1976, I graduated from New York University with a Bachelor of Science degree in Accounting and in 1981 I received a Master of Business Administration from Harvard Business School.

Q. Please describe your professional background.

A. I held positions as a Staff Accountant at Touche Ross & Co., (1976-1979), Director, Treasury at Coleco Industries, Inc. (1982-1987) and Corporate Controller and Treasurer at Trigen Energy Corporation (1987-1995). In 1997, I joined R. J. Rudden Associates, Inc. a consulting firm specializing in rate and regulatory matters, as a Principal Consultant; R. J. Rudden became part of Black & Veatch Corporation in 2005. In 2010, I started HSG Group, Inc., a consulting firm specializing in rate and regulatory

matters, and have continued to work with utilities in New York, Massachusetts, New Hampshire, Pennsylvania, and Rhode Island. I have more than 30 years of experience in the energy industry, including 20 years in rate and regulatory proceedings. My areas of expertise include embedded class cost of service studies, marginal cost studies, revenue allocation, rate design and revenue requirements, for both electric and gas utilities.

Q. Have you previously testified before a regulatory commission?

A. Yes. I have testified before the Commission on behalf of KEDNY and other New York State utilities, as well as before regulatory commissions in other states.

II. Purpose of Testimony

Q. What is the purpose of the Panel's testimony?

A. The purpose of the Panel's testimony is to present the following topics:

- Revenues for the Historic Test Year (twelve months ended December 31, 2022), which include historic base delivery revenues, gas commodity revenues, revenue tax revenues, and total revenues;
- Forecast revenues for the Rate Year (twelve months ending March 31, 2025) and Data Years 1, 2, and 3 (twelve months ending March 31, 2026, 2027, and 2028, respectively);

- Results of the Embedded Cost of Service Study ("ECOSS") for the Rate Year;
- Proposed revenue allocation;
- The Company's proposed rate design for each service classification under KEDNY's tariff, PSC No. 12 – Gas ("Tariff");
- Proposed updates to the Company's lost and unaccounted for gas ("LAUF") target and dead band limits;
- Proposed modifications to the New York Facilities System ("NYFS") surcharge reconciliation;
- Proposed updates to the merchant function charge ("MFC");
- Proposed updates to the revenue decoupling mechanism ("RDM");
- Proposed updates to the Non-Firm Demand Response ("NFDR") revenue targets;
- Proposed changes to Electric Generator Revenue targets;
- Rate design methodologies related to issues arising under the Climate Leadership and Community Protection Act ("CLCPA");
- Proposed modifications to Tariff services, fees, and provisions;
- Commitments from the 2019 KEDNY and KEDLI Rate Cases;
- Results of the Gas Marginal Cost Study ("MCS");
- Levelization options for a multi-year rate plan;

- ECOSS Study with Mains 100 percent Demand classified, as required in the Joint Proposal adopted in the 2019 KEDNY and KEDLI Rate Cases; and
- Proposed changes and updates to the Gas Safety and Reliability Surcharge ("GSRS") provisions in the Tariff.

Q. Is the Panel sponsoring any exhibits in support of its testimony?

A. Yes. The following exhibits were prepared by or under the supervision of one or more of the members of the Panel:

- Exhibit __ (RDP-1) sets forth the Company's Historic Test Year revenues by service class.
- Exhibit __ (RDP-2) provides the Company's revenue forecast at current delivery rates, by service class, for the Rate Year and Data Years, and sets forth the proposed changes to miscellaneous and other revenues.
- Exhibit __ (RDP-3) is the ECOSS for the Rate Year.
- Exhibit __ (RDP-4) presents the Company's proposed revenue allocation, rate design, and customer bill impacts for the Rate Year.
- Exhibit __ (RDP-5) presents the calculation of the LAUF target and the associated dead band.
- Exhibit __ (RDP-6) sets forth the proposed MFC.

- Exhibit __ (RDP-7) sets forth the proposed revenue per class targets for the Company's RDM.
- Exhibit __ (RDP-8) presents the Tariff fees.
- Exhibit __ (RDP-9) presents the Company's MCS for the Rate Year.
- Exhibit __ (RDP-10) presents an example of the Earnings Adjustment Mechanism ("EAM") surcharge calculation.
- Exhibit __ (RDP-11) presents a *pro forma* statement of the proposed surcharge.
- Exhibit __ (RDP-12) presents an ECOSS Study with Mains 100% Demand classified.
- Exhibit __ (RDP-13) presents an NFDR Gas Cost Reconciliation Illustrative Example.
- Exhibit __ (RDP-14) presents the updated Electric Generator Revenue target.
- Exhibit __ (RDP-15) contains workpapers supporting various exhibits.

III. Historic Test Year Gas Revenues

Q. Please discuss the Company's Historic Test Year revenues.

A. The Historic Test Year revenues were $2,499 million. Exhibit __ (RDP-1) sets forth the base delivery revenue for each service classification in the

Historic Test Year. The exhibit also includes a summary of the adjustments to revenues included on the Company's books for the Historic Test Year, including, but not limited to, the MFC, RDM reconciliation, NFDR reconciliation, GSRS, NYFS Surcharge, paperless bill credits, Transportation Adjustment Clause ("TAC"), Rate Adjustment Clause ("RAC"), EAMs, Demand Capacity Surcharge Mechanism ("DCSM"), Arrears Management Program ("AMP"), Late Payment Charge and Other ("LPCO"), and Electric Generator Revenue targets. In addition, the exhibit summarizes commodity revenue and revenue taxes by service classification as well as other gas revenues included on the Company's books for the Historic Test Year.

IV. Rate Year Revenue Forecast

Q. What are the total revenues projected for the Rate Year?

A. The Company's total projected Rate Year revenues are $2,245 million based on current delivery rates and surcharges, as compared to Historic Test Year revenues of $2,499 million. The forecast revenues were calculated by applying the stay out period delivery rates (rates effective April 1, 2023) to the forecast billing determinants derived from the sales forecast provided by the Company's Gas Load Forecast ("GLF") Panel. Details of the Rate

Year revenue forecast are shown in Exhibit __ (RDP-2).

Q. Please describe Exhibit __ (RDP-2).

A. Exhibit __ (RDP-2) sets forth the forecast Rate Year revenues based on current rates approved in the 2019 KEDNY and KEDLI Rate Cases. The revenues consist of base delivery revenue, commodity revenue, and revenue taxes. The exhibit also shows additional revenue components, including the MFC, electric generator revenue, and Net Utility Plant and Depreciation Expense ("NUP") Reconciliation Surcharge revenue. In addition, the exhibit includes Other Gas Revenue.

The exhibit also includes the customer count and delivery forecasts developed by the Company's GLF Panel. As discussed in the GLF Panel's testimony, the Company's delivery forecast projects a certain level of growth in load demand during the Rate Year. The Company developed its forecast Rate Year revenue based on this delivery forecast.

Q. Please explain how the Company developed its base delivery revenue forecast for the Rate Year.

A. For firm and non-firm sales and transportation service classifications (SC 1, 2, 3, 4A, 4A-CNG, 4B, 7, 21, and 22), the base delivery revenue forecast

was developed based on the forecast average number of customers and deliveries. Deliveries were allocated to the usage blocks within each service class using a three-year average percentage of actual billed block usage to allocate sales. To normalize for the impacts of the COVID pandemic, the Company used historic billed block usage for calendar years 2019, 2021 and 2022 (excluding calendar year 2020) to calculate the historic three-year average percentages.

Q. Has the Company used a three-year average percentage of actual billed block usage to allocate sales to the various blocks in prior rate case proceedings?

A. No. In previous rate case proceedings, the Company has used an ogive analysis to allocate the usage blocks within each service classification.

Q. Why did the Company use a three-year average percentage of actual billed block usage as opposed to an ogive analysis to allocate sales to the various blocks?

A. In accordance with the Joint Proposal in the 2019 KEDNY and KEDLI Rate Cases, the Company met with Department of Public Service Staff ("Staff") to discuss potential options for developing a methodology to normalize usage data prior to commencing its ogive process. During this meeting, the

Company and Staff concluded that the Company would compare the results of an ogive analysis to a historic three-year average percentage of actual billed block usage by rate code. After reviewing the results of this comparison, the Company and Staff determined that both methodologies provided similar results when applied to a revenue forecast. Because the two methodologies provided similar results and the historic average is a simpler methodology, the Company proposes to allocate the delivery forecast by block by rate code using a historic three-year average percentage of actual billed block usage in its revenue forecast.

Q. Please explain how the revenue forecast for the electric generators was developed.

A. The electric generator revenue forecast was developed by multiplying each customer's actual usage for 12-months ending October 2022 by their applicable transportation charge, daily balancing service demand charge, value added charge, and gross revenue tax rates effective October 2022. Each customer's applicable annual minimum bill obligation was then compared against the customer's calculated revenue forecast using actual charges and historic usage as described previously. If a customer's annual minimum bill obligation was greater than its revenue forecast, the

customer's annual minimum bill obligation was used in the electric generator revenue forecast.

Q. How was the MFC revenue component developed?

A. The MFC surcharge, which is designed to recover gas supply-related costs, was developed based on the New York Mercantile Exchange ("NYMEX") forward gas prices as of December 28, 2022.

Q. Please explain why the NUP Reconciliation Surcharge mechanism is a component of the Company's Rate Year and Data Years revenue forecast.

A. Because the Company did not file for new delivery rates to be effective on or before April 1, 2023, the NUP Reconciliation Surcharge mechanism is converted to a two-way reconciliation through March 31, 2024 (capped at the Companies' capital forecast levels included in the 2019 KEDNY and KEDLI Rate Cases for the twelve months ending March 2024). The Company is permitted to recover the pre-tax revenue requirement associated with the Company's capital investments and associated depreciation to the extent the actual revenue requirement exceeds the level of net utility plant and book depreciation expense reflected in rates through the NUP Reconciliation Surcharge. The NUP Reconciliation Surcharge

revenue in the Rate Year and Data Years revenue forecast was included to offset the amount of net utility plant and depreciation expense embedded in the Company's revenue requirement to present the actual increase in base delivery revenues proposed in this rate case proceeding.

Q. Please explain how the revenue forecast for the NUP component was developed.

A. As part of the Company's Rate Year net utility plant and depreciation forecast, the link period is also forecast. In addition to the Company forecasting the link period NUP for the twelve months ended March 31, 2024, the Company forecast the City State Construction ("CSC") and Customer Connections trackers for that same time period. The NUP forecast was then adjusted for the CSC and Customer Connections tracker forecasts because they work in conjunction with the NUP tracker. The adjusted forecasted NUP levels for the twelve months ended March 31, 2024 were then compared to the NUP levels that were included in the 2019 KEDNY and KEDLI Rate Cases utilized for setting the NUP surcharge cap and they exceeded the 2019 levels. As a result, the Company anticipates surcharging up to the cap of $53.653 million set in the 2019 KEDNY and KEDLI Rate Cases and has included that amount in the revenue forecast as shown in Exhibit __ (RDP-2).

Q. How were the commodity revenues and the revenue tax forecasts developed?

A. The gas commodity revenue forecast was developed based on the NYMEX forward gas prices as of December 28, 2022. The Gas Adjustment Clause ("GAC") factors were applied to the forecast sales volumes. Revenue taxes were developed by applying the applicable gross revenue tax rate to the revenues.

Q. How was the forecast of Other Gas Revenues developed?

A. The Company developed the Rate Year forecast of Other Gas Revenue components as follows:

- Late payment charge revenue was developed by calculating the Historic Test Year's late payment charge as a percentage of total revenues and applying that percentage to the projected Rate Year retail revenues.
- The Economic Development (Edgar) Discounts forecast was developed using the Historic Test Year amounts in the Rate Year.
- Rent from property was developed by reviewing leases and expected renewals to determine the revenues that will be billed.
- The NYFS revenue forecast was determined by calculating the forecast intercompany payable to KEDLI and payables to

Consolidated Edison Company of New York, Inc. ("Con Edison") pursuant to the parties' May 1, 2018 agreement ("NYFS Agreement"). In Exhibit __ (RDP-2), the NYFS forecast revenue appears on the "Joint Facilities" line.

- The Governor's Island revenue forecast was in accordance with the agreement in effect during the Historic Test Year.
- The miscellaneous revenue fees forecast consists of the Non-Residential Field Collection Fee, Reconnect Fee, Unproductive Field Visit Fee, No Access Fee, Termination Posting Fee, Residential Service Guarantee Charge, Non-Residential Service Guarantee Charge, Premium Service Fee, Special Meter Read Fee, and Dishonored Check Fees. The revenue forecast for Non-Residential Field Collection Fees, Reconnect Fees and Unproductive Field Visit Fees were each forecast using a pre-COVID three-year average (calendar years 2017-2019) to normalize the number of fees billed for a typical year multiplied by the current tariff fee. The No Access Fee was forecast using a historic ratio of penalties billed to customers and applied to the Rate Year and Data Years number of meters (represents customer accounts) to be inspected in accordance with the Company's Service Line Inspection work plan. The Termination Posting Fee and Residential

and Non-Residential Service Guarantee credits were forecast using the Historic Test Year amount plus inflation. The Premium Service Fee, Special Meter Read Fee, and Dishonored Check Fees were forecast at the current Historic Test Year amounts.

- The billing service fee revenue forecast was calculated by applying $1.31 per account per month.
- The miscellaneous third-party revenue forecast was developed by applying the inflation factor to the Historic Test Year values.
- Supervision and administrative burdens were forecast by applying the inflation factor to the Historic Test Year values.
- The Newtown Creek Project revenue forecast includes estimated revenue from gas sales and environmental attributes.

Q. Does the Company propose any new revenue reconciliations during this rate case proceeding?

A. Yes. The Company is proposing to reconcile and defer the difference in Late Payment Charge revenue included in base delivery rates when compared to actual revenue billed to customers. Because of the uncertainty in the Historic Test Year ratio used to develop the late payment charge revenue forecast and the effects of the Phase 1 and Phase 2 Electric and Gas Bill Relief Program on late payment charges, the Company proposes a

reconciliation of the revenue to be deferred for future recovery or refund to customers.

V. Embedded Cost of Service Study

A. Purpose of ECOSS and Overview of Methodology

Q. What is an ECOSS and what is its purpose?

A. The purpose of an ECOSS is to apportion a utility's total revenue requirement, including plant and other investments, operating expenses, depreciation, and taxes, among the rate classes served by the utility. The ECOSS computes, for each class, the return on rate base for the Rate Year at present rates, and the total and incremental revenue that must be collected from that class to produce the system average rate of return on rate base. This information provides guidance in revenue allocation and in the development of rates.

Q. Please summarize the methodology employed for the ECOSS.

A. The ECOSS is prepared by analyzing each element of the utility's revenue requirement and assigning or allocating it among the rate classes. The ECOSS was performed using a proprietary model developed by HSG Group. This model uses the traditional three-step process as follows:

- Functionalization – Each of the Company's costs and expenses, as well as rate base components, are assigned or allocated among each

of the gas functions identified in Appendix A to the Commission's November 9, 2001 Order in Case 00-M-0504.

- Classification – Each functionalized cost element is separated into demand, commodity, and customer cost categories.
- Class allocation – Each functionally classified cost element is assigned or allocated among one or more of the Company's rate classes.

Q. Please describe the functionalization step of the ECOSS.

A. In the functionalization step, cost elements are separated among the utility's basic service functions by determining what physical purpose each cost element serves.

Q. What are the functions included in the ECOSS?

A. The functions included in the ECOSS are:

- Supply and Storage – availability and supply of gas and storage to meet seasonal and daily peak demands;
- Transmission – moves gas from supply and storage sources to localized distribution facilities;
- Distribution – moves gas from the transmission system to customers' premises (includes service lines);

- Metering and Billing – connects customers to the system, measures their usage and demand, and bills for the services provided;
- Collections;
- Sales Promotion – the Company does not promote gas sales and therefore the cost associated with this function is zero; and
- Procurement.

Q. Please describe the classification step of the ECOSS.

A. The Company's gas distribution system is designed to meet three primary objectives:

1. Connect customers to the Company's distribution system;
2. Meet the aggregate peak design day capacity requirements of all customers entitled to service on the peak day; and
3. Deliver natural gas commodity to customers, whether they are sales or transportation customers.

Based on these objectives, each functionalized cost element is classified as being customer-related, demand-related, or commodity-related, depending on which of the foregoing objectives it serves.

Cost elements classified as customer-related are incurred to attach a customer to the distribution system, meter gas usage, and maintain the

customer's account. Customer-related cost elements are primarily a function of the number of customers served and are incurred by the Company whether or not an individual customer uses any gas. Such costs may include capital costs associated with the customer component of distribution mains, as well as costs for services, meters and metering, billing, customer service, and accounting and collection activities.

Demand- or capacity-related cost elements are associated with plant that is designed, installed, and operated to meet peak hourly or daily customer gas flow requirements. Demand-related components include transmission and distribution mains, localized distribution facilities, and dedicated facilities that are designed to satisfy individual customer maximum demands. Demand-related cost elements are allocated among the classes based on their contributions to the peak demand for which the system is designed.

Cost elements classified as commodity-related generally vary with the volume of gas sold or delivered (*i.e.*, throughput) to customers. Costs related to obtaining gas supply are classified as commodity-related.

Q. How were costs functionalized to Supply-Storage classified?

A. The classification step for Supply-Storage separated those costs into costs recovered through the GAC, and other costs related to supply and storage. The amount of costs recovered through the GAC was equal to the GAC revenue.

Q. Please describe the process for determining how much of the investment in mains should be considered customer-related versus demand-related.

A. Distribution mains are installed to connect customers to the distribution system (customer-related) as well as to provide capacity to meet customer requirements on the design day (demand-related). Therefore, the cost of mains is classified as partly customer-related and partly demand-related. The customer component was allocated among the customer classes based on the number of customers. The demand component was allocated among the customer classes based on their contribution to design-day demand.

Q. Please describe how the minimum-system study was performed.

A. Minimum-system studies are a widely accepted method to classify mains between customer- and demand-related costs. The customer-related component is the portion of cost representing the least-cost system the

utility would install simply to connect customers, without regard to the need to meet demand.

The analysis begins by obtaining from plant and accounting records the cost of mains the utility has installed in recent years, detailed by material (plastic, steel, and cast iron), length, and diameter. Then the installed cost per foot is computed for each material/diameter type.

The minimum system ratio is computed as the ratio of (X), the cost of replacing the entire mains distribution system with the minimum component, which is two-inch plastic, to (Y), the cost of replacing the entire mains distribution system with plastic of the same diameter as installed.

Q. Please summarize the results of the minimum-system study.

A. For the most recent period, the minimum-system ratio was estimated to be 47.88 percent. For purposes of the ECOSS, the Company averaged the results of this study and the two prior studies, to promote stability and to broaden the period of data used in the study.

The resulting customer component of mains, which represents the portion of cost needed to connect customers without regard to their design-day

demands (*i.e.*, customer-related costs), was estimated to be 44.29 percent and the demand component 55.71 percent.

Q. Please explain the allocation step of the ECOSS.

A. In the allocation phase of the ECOSS, the cost elements that have been functionalized and classified are allocated among the service classes. There are two types of allocation factors, or allocators, that are used for this purpose: external allocators and internal allocators. External allocators are based on special studies derived from data in the Company's accounting and other records. For example, the number of customers by service class is an external allocator that was used in the Company's ECOSS to allocate some of the customer care costs. Other examples of external allocators include annual deliveries, design day requirements, and historic bad debt experience. Internal allocators are based on some combination of external allocators, costs that are directly assigned, and other internal allocators. For example, the allocator for property insurance expense is based on plant investment assigned to each service class; therefore, it is necessary to compute plant investment by service class before property insurance costs can be allocated among the classes.

Q. Which service classes were identified for purposes of the allocation phase?

A. In the allocation phase of the ECOSS, the functionalized, classified cost elements were allocated among the service classifications shown in the table below.

Service Class
SC 1A – Residential Non-Heat
SC 1B – Residential Heat
SC 1BDG – Residential DG
SC 2-1 – General Service Non-Heat
SC 2-2 – General Service Heat
SC 3 – Multi-Family
SC 4A – High Load Factor Service
SC 4A-CNG – Compressed Natural Gas Service
SC 4B – Year-round AC Non-Residential
SC 7 – Seasonal Off-Peak
SC 21 – Baseload DG
SC 22 – Non-Firm Demand Response

Q. Did the Panel prepare an exhibit that shows the allocators used for each cost element?

A. Yes. Exhibit __ (RDP-3), Schedule 7A presents the allocator used for each cost element for each step of the ECOSS – functionalization, classification, and class allocation.

B. ECOSS Results

Q. Please explain Exhibit __ (RDP-3).

A. Exhibit __ (RDP-3) presents the ECOSS for the Rate Year. It is composed of the following schedules:

- Schedule 1 is a summary of the ECOSS results, discussed below.
- Schedule 2 summarizes the results of the class allocation step of the ECOSS and shows how each element of the total distribution revenue requirement is allocated among the services classes.
- Schedule 3 presents unit costs, indicating for each function the unit rates each class would be charged if it produced the system average rate of return.
- Schedule 4 presents the functionalization step of the ECOSS. The cost elements include plant, depreciation reserve, and other components of rate base, operation and maintenance ("O&M") expenses, depreciation expense, other taxes, income taxes, revenue, and return. The total distribution revenue requirements are presented using the Federal Energy Regulatory Commission ("FERC") Uniform System of Accounts.
- Schedule 5 presents the classification step of the ECOSS for Supply/Storage (classified between demand and commodity) and Distribution functions (classified between demand and customer).

The cost elements are the same as for the functionalization step. Classification is not shown for Transmission or Procurement, because they are 100 percent demand-related, or for Metering/Billing, Collections, or Sales Promotion, which are 100 percent customer-related.

- Schedule 6 presents the class allocation step of the ECOSS. The cost elements are the same as for the functionalization and the classification steps. Separate schedules are included, as follows:
  - Schedule 6A – Supply-Storage, Non-GAC
  - Schedule 6B – Supply-Storage, GAC
  - Schedule 6C – Collections
  - Schedule 6D – Transmission
  - Schedule 6E – Distribution Demand-Related
  - Schedule 6F – Distribution Customer-Related
  - Schedule 6G – Billing
  - Schedule 6H – Sales Promotion
  - Schedule 6I – Procurement
- Schedule 7A presents the allocator used for each cost element for each step of the ECOSS – functionalization, classification, and class allocation.

- Schedules 7B, 7C, and 7D present, respectively, the values for each functionalization factor, classification factor, and class allocation factor.
- Schedule 8 presents the calculation of external allocation factors; a list of the schedules included is on the first page of the schedule.
- Schedule 9 describes the methodology used to prepare the ECOSS.

Q. Please summarize the results of the ECOSS.

A. Exhibit __ (RDP-3), Schedule 1 presents by service class the revenue at present rates, rate of return on rate base at present rates, the revenue needed for the class to achieve the overall rate of return that the Company is requesting in this proceeding, and the increase or decrease to revenue at current rates, both in dollars and percent, needed for the class to achieve that rate of return. This information provides guidance for allocation of the Company's proposed revenue increase and rate design.

Q. For what period was the ECOSS prepared?

A. The Company's ECOSS reflects the Rate Year.

VI. Revenue Allocation, Rate Design, and Customer Bill Impacts

A. Exhibits

Q. Please summarize the exhibits relating to the Company's proposed revenue allocation, rate design, and bill impacts.

A. Exhibit __ (RDP-4) presents and supports the Company's proposed revenue allocation, rate design, and resulting bill impacts.

- Schedule 1 presents the development of the Company's proposed revenue allocation by service class, which is discussed below, before computing the additional Low-Income Discounts resulting from the Company's proposed rates.
- Schedule 2 is the reconciliation of the revenue requirement in the ECOSS to the Company's total revenue requirement, and reconciliation of the total increase to the components represented by change in delivery revenue, change in MFC, and change in other revenue.
- Schedule 3 details the specific delivery rates and the changes that are proposed for each rate for each service class, also discussed in detail below.
- Schedule 4 provides monthly bill comparison tables that show the net impact of the proposed rates for the Rate Year at different monthly consumption levels for the following service

classifications: SC 1A, SC 1AR, SC 1B, SC 1B-DG, SC 1BR, SC 2-1, SC 2-2, SC 3, SC 4A, SC4A-CNG, SC 4B, SC 7, SC 21 and SC-22 Non-Firm Demand Response.

- Schedule 5 provides the estimated total annual bill impact of the proposed rates for the Rate Year for a typical SC 1B – Residential Heating customer.
- Schedule 6 presents the proposed MFC components from the ECOSS.
- Schedule 7 is the re-allocation of the incremental Low-Income Discount (discussed below).
- Schedule 8 is a summary of Current and Proposed rates, billing units and revenue for each rate class.

B. <u>Revenue Allocation</u>

Q. Please summarize the methodology used to develop the Company's revenue allocation.

A. In developing the Company's proposed revenue allocation, the Panel considered the costs to provide the type and quality of service required by each service class as determined in the ECOSS. The proposed revenue allocation is intended to produce revenue from each service class that will move the service class rate of return closer to the overall rate of return that

the Company is requesting, a concept known as "unity," while mitigating extreme impacts on customer groups, a concept known as "gradualism."

As presented in the testimony of KEDNY's Revenue Requirements Panel, the Company's revenue requirement is $2,674.3 million ($2,581.3 million without revenue taxes), representing an increase of $429.2 million ($414.2 million without revenue taxes) over revenue at present rates (*See* Exhibit __ (RRP-1), page 2). After reflecting the effects of changes in other revenue items (MFC, Billing Service Fees), the Company requires base delivery revenue of $1,792.8 million excluding revenue taxes, an increase of $409.4 million, representing an increase of 29.6 percent. Please refer to Exhibit __ (RDP-4), Schedule 2, page 1 for details.

The tentative allocation of the overall delivery revenue increase of $409.4 million, and the development of class revenue targets, is presented on Exhibit __ (RDP-4), Schedule 1 and the final revenue allocation to reflect additional Low-Income Discounts is on Schedule 7. The inclusion of the additional Low-Income Discounts is a reallocation of the incremental discounts between the service classes and does not represent an additional overall delivery increase. Therefore, the increase over *pro forma* base delivery revenue at present rates remains at 29.6 percent. *Pro forma*

delivery revenue equals delivery revenue based on forecast customer count and volume at present rates (line 1), adjusted to reflect the elimination of the NUP surcharge (line 2).

To allocate the increase among the rate classes, the Panel employed the same methodology as in past cases, where class increases are guided by the class returns relative to the system average return. The average rate of return on rate base at present rates is 2.96 percent (line 11). A tolerance band was developed for classes whose returns at present rates were close to the Company's overall rate of return at present rates. Using a tolerance band is intended to avoid disputes about minor issues in the ECOSS. The tolerance band was a rate of return 0.65 times the average on the low end and 1.35 times the average on the high end, or returns of 1.92 percent to 3.99 percent. The only class within the tolerance band, SC1B, was assigned a revenue target increase of 28.64 percent, slightly under the average increase.

Classes below the band (SC1A, SC1-DG, SC3, SC7 and SC21) were assigned increases of 34.0 percent, a larger than average increase.

Classes with returns above the band were divided into Over (SC2-2 and

SC4A), High (SC2-1, SC4A-CNG and SC 4B) and Very High (NFDR). Over classes were assigned increases less than the average, High classes were assigned smaller increases and Very High classes were assigned even smaller increases (Over - 27 percent; High - 25.5 percent; Very High - 22 percent).

Based on the assigned percentage increases, revenue targets were developed for each class. This information is presented on Exhibit __ (RDP-4), Schedule 1.

Q. Did the Panel compare total proposed delivery revenue to the revenue requirement?

A. Yes. The reconciliation of delivery revenue at current rates to proposed delivery revenue is shown on Exhibit __ (RDP-4), Schedule 2**.**

Q. Did the Panel compute rates of return at the proposed class revenue targets?

A. Yes. The rates of return are on Exhibit __ (RDP-4), Schedule 1, line 55.

Q. Does the proposed revenue allocation move the classes closer to the system average rate of return?

A. Yes. Each class makes progress towards unity (the system average rate of return), as shown on Exhibit __ (RDP-4), Schedule 1, line 58.

Q. How was the MFC reflected in the revenue allocation?

A. The Company is proposing to collect a total of $23.7 million through the MFC. In determining the amount to be collected in delivery rates, the proposed MFC revenue is excluded as shown in Exhibit __ (RDP-4), Schedule 1, line 17. The MFC proposed revenue is then added back for each rate class (line 45) to compute the return at proposed rates.

C. Rate Design

Q. What considerations were used in developing the Company's proposed rates?

A. The Panel considered the following objectives in developing the proposed rates:

- To collect the revenue target established for each service class in the revenue allocation process.
- To avoid severely disproportionate impacts on customer subgroups within a class.

- To provide signals to customers to reflect the effects of their usage on the overall system, including supporting conservation. This is supported by increasing, where feasible, the tail block by a greater percentage than the mid-block, thus moving away from a declining rate structure.

Q. Did you prepare a schedule showing the computation of the rates needed to produce the target revenue for each class?

A. Yes, the computations are on Exhibit __ RDP-4, Schedule 3.

Q. How were the proposed rates developed for SC 1A – Residential Non-Heat?

A. For SC 1A, the customer charge was increased from $16.25 to $21.00 per month, compared to customer-related costs of $44.91. The balance of the revenue target is collected in blocked volumetric rates. The Panel examined the effects of increasing the tail block by a larger percentage than the mid-block, and found this would cause unacceptably large increases for higher usage customers, with little ability to manage their demand because this is a non-heating class. Therefore, the volumetric rates for both blocks were increased by the same percentage.

Q. How were the proposed rates developed for SC 1B – Residential Heat?

A. For SC 1B, the customer charge was increased from $21.55 to $25.00 per month, compared to customer-related costs of $72.08. The balance of the revenue target is collected in blocked volumetric rates. The tail block rate was moved from 37.3 percent of the mid-block rate to 53.0 percent.

Q. How were the proposed rates developed for SC 1B-DG – Residential Distributed Generation ("DG")?

A. For SC 1B-DG, the customer charge was increased from $32.93 to $35.00 per month, compared to customer-related costs of $78.88. The balance of the revenue target is collected in a single volumetric rate.

Q. How were the proposed rates developed for SC 2-1 – Non-Residential Non-Heat?

A. For SC 2-1, the customer charge was increased from $37.55 to $44.50 per month, compared to customer-related costs of $141.13. The balance of the revenue target is collected in blocked volumetric rates. The Block 3 rate was moved from 69.6 percent of the Block 2 rate to 80.1 percent, and the Block 4 rate was moved from 68.5 percent of the Block 3 rate to 79.9 percent.

Q. How were the proposed rates developed for SC 2-2 – Non-Residential Heat?

A. For SC 2-2, the customer charge was increased from $37.55 to $44.50 per month, compared to customer-related costs of $121.77. The balance of the revenue target is collected in blocked volumetric rates. The Block 3 rate was moved from 89.2 percent of the Block 2 rate to 94.6 percent, and the Block 4 rate was moved from 62.1 percent of the Block 3 rate to 76.6 percent.

Q. How were the proposed rates developed for SC 3 – Multi-Family?

A. For SC 3, the customer charge was increased from $39.51 to $46.00 per month, compared to customer-related costs of $268.14. The balance of the revenue target is collected in volumetric rates. The Block 3 rate was moved from 78.2 percent of the Block 2 rate to equal to the Block 2 rate, thus eliminating the declining block.

Q. How were the proposed rates developed for SC 4A – High Load Factor ("HLF")?

A. For SC 4A-HLF, the customer charge was increased from $250.00 to $300.00 per month, compared to customer-related costs of $3,046.71. The balance of the revenue target is collected in a single volumetric rate.

Q. How were the proposed rates developed for SC 4A-CNG – Compressed Natural Gas?

A. For SC 4A-CNG, the customer charge was increased from $250.00 to $300.00 per month, compared to customer-related costs of $7,355.82. The balance of the revenue target is collected in a single volumetric rate.

Q. How were the proposed rates developed for SC 4B – Year-Round AC?

A. For SC 4B, the customer charge was increased from $130.00 to $145.00 per month, compared to customer-related costs of $372.96. The balance of the revenue target is collected in volumetric rates. The Block 3 rate was moved from 50.0 percent of the Block 2 rate to equal to the Block 2 rate, thus eliminating the block.

Q. How were the proposed rates developed for SC 7 – Seasonal?

A. For SC 7, the customer charge was increased from $39.51 to $46.25 per month, compared to customer-related costs of $231.75. The balance of the revenue target is collected in a single volumetric rate.

Q. How were the proposed rates developed for SC 21 – DG Sales?

A. SC 21 has different customer charges based on the capacity of the customer's DG installation and different volumetric charges based on the

capacity and season. There is also a demand charge based on the customer's installed capacity. The customer charges were each increased by 10 percent. The demand charge was increased by 25 percent. To collect the balance of the revenue target, the seasonal volumetric rates were each increased by 54.3 percent.

Q. How were the proposed rates developed for SC 22 – Non-Firm Demand Response?

A. The NFDR rates are set by reference to the tail block rates for otherwise applicable classes SC2 and SC3. Present rates represent discounts of 50 percent for Tier 1 customers interruptible at 15 degrees, and 60 percent for Tier 2 customers interruptible at 20 degrees. The discounts were increased to approximately 55 percent and 65 percent respectively, to provide greater incentive for these customers to remain as non-firm customers. The Company's ability to interrupt this class is critical to providing firm customers with uninterrupted service. The customer charge was kept at $375.00 per month.

Q. How were the rates adjusted to reflect the higher Low-Income Discounts?

A. The revenue requirement includes $46.9 million reflecting the discount

available to low-income customers at present rates, equal to the difference between the estimated total such customers would pay at standard rates for their applicable classes, and the amount they will actually pay based on the Company's Low-Income programs. This amount is included in Account 908 (Customer Assistance Expense) and allocated based on class revenue.

Because the Company is proposing to increase standard rates, while the amounts eligible low-income customers will pay are not changing, the total Low-Income Discount increases from $46.9 million to $73.5 million, an increase of $26.6 million. This increase was allocated among all classes in proportion to revenue, and volumetric rates for each class were increased by the same percentage to produce the additional revenue. The allocation of the incremental $26.6 million Low-Income Discount is shown on Schedule 7. The computations of the rates needed to reflect the new revenue targets are set forth on Exhibit __ (RDP-4), Schedule 3. It should be noted that the calculation of the incremental low-income discounts needed to keep Energy Affordability Program ("EAP") customers at a 6 percent energy burden resulted in the total Low-Income Discount exceeding the 2 percent budget cap. To the extent that the final revenue requirement causes discounts to be in excess of the budget cap, the Company will address the issue at that time.

D. Customer Bill Impacts

Q. Please describe the impact of the Company's rate design proposals on typical customer bills in the Rate Year.

A. The Company evaluated the impact of its rate design proposals on customer bills in the Rate Year using two approaches. First, for each service classification, the Company prepared monthly bill comparison tables that show the net change to customers' monthly delivery and gas commodity charges for different levels of usage as set forth in Exhibit __ (RDP-4), Schedule 4. Second, the Company evaluated the annual Rate Year bill impact for an average SC 1 residential heating customer. As shown on Exhibit __ (RDP-4), Schedule 5, an average residential heating customer is estimated to see an annual total bill increase of 17.7 percent.

VII. Lost and Unaccounted for Gas

Q. Is the Company updating its Lost and Unaccounted For Gas target?

A. Yes. As shown on Exhibit __ (RDP-5), the Company proposes to update its methodology to calculate the LAUF target to use a five-year straight average, as previously filed in prior rate cases. The updated LAUF target is 2.252 percent with a standard deviation of ±0.308 percent. The dead band is equal to ±2 standard deviations from the LAUF target and has an upper band of 2.868 percent and lower band of 1.636 percent. The Company will

reconcile its performance under the LAUF incentive as part of its annual Gas Cost Reconciliation filing.

VIII. New York Facilities System

Q. Please describe the NYFS.

A. The NYFS is a high-pressure gas transmission system that spans the service territories of KEDNY, KEDLI, and Con Edison (collectively, the "NYFS Companies") and interconnects the NYFS Companies with the interstate pipelines that serve the New York metropolitan region. Gas received into the NYFS from the interstate pipelines is delivered directly, and/or by displacement, to the NYFS Companies. The carrying costs and O&M costs associated with the NYFS ("NYFS costs") are allocated among the NYFS Companies pursuant to the NYFS Agreement.

Q. How does the Company currently recover NYFS costs from customers?

A. Currently, the Company's share of NYFS costs is included in revenue requirements and recovered from customers in firm delivery rates. In accordance with the "Order Regarding NYFS Agreement" issued October 18, 2018 in Case 18-G-0318, the Company reconciles actual costs to the amounts included in base rates. Any over or under recoveries are included in the NYFS surcharge mechanism included on the Statement of NYFS

Surcharge.

Q. Is the Company proposing to change the way it recovers NYFS costs from customers?

A. No.

IX. Merchant Function Charge

Q. Please describe the Company's current MFC.

A. The MFC is designed to recover certain expenses associated with the Company's role of providing gas procurement functions for: (i) customers who take firm sales service under SC 1 – Residential, SC 2 – General, SC 3 – Multi Family, SC 4A – HLF, SC 4A-CNG – Natural Gas Vehicle Wholesale, SC 4B – Year Round Air Conditioning Service, SC 7 – Seasonal Off-Peak Service, and SC 21 – Baseload Distributed Generation; (ii) customers who take transportation service under SC 17 – Firm Transportation Service; (iii) SC 22 – NFDR sales customers; and (iv) ESCOs that participate in the Company's Purchase of Receivables ("POR") program. Specifically, for the firm sales customers, the MFC is designed to recover the costs associated with gas supply procurement, commodity-related credit and collection expenses, commodity-related uncollectible expenses, the return requirement on gas purchase-related working capital,

the return requirement on gas storage inventory, and commodity-related working capital expenses. For firm transportation customers, the MFC is designed to recover the return requirement on gas storage inventory that the Company manages on behalf of these customers. For NFDR sales customers, the MFC is designed to recover the costs associated with gas supply procurement, commodity-related credit and collection expenses, commodity-related uncollectible expenses, and the return requirement on gas purchase-related working capital.

Q. What components of the MFC are applicable to ESCOs that participate in the Company's POR program?

A. Consistent with the Commission's "Order Requiring Modifications to Billing Services Agreements" in Case 06-G-1185 (issued September 25, 2009), ESCOs that participate in the Company's POR program are charged for the commodity-related uncollectible costs and credit and collection expenses.

Q. Is the Company proposing any changes to its MFC?

A. Yes. The Company is proposing to update the MFC to reflect the most recent targets.

Q. Did the Company prepare a summary of total MFC revenues for the Rate Year?

A. Yes. As set forth on Exhibit __ (RDP-6), Schedule 1, the Company has summarized all the MFC components for the Rate Year and the GAC year (twelve months ending August 31), which aligns with the Company's Cost of Gas reconciliation.

Q. Has the Company updated its calculation of gas supply procurement expenses?

A. Yes. As set forth on Exhibit __ (RDP-6), Schedule 3, page 1, the Company updated its gas supply procurement expenses to reflect the Rate Year revenue requirement. As shown on the exhibit, the updated gas supply procurement expenses total for the GAC year is $1,611,395 and the per dekatherm rate is therefore set at $0.01398. Consistent with the current mechanism, the Company will reset the gas supply procurement expense per dekatherm charge annually based on the latest sales forecast and reconcile revenue to the target as shown on Exhibit __ (RDP-6), Schedule 3, page 1. Additionally, Exhibit __ (RDP-6), Schedule 2, page 1 summarizes the annual target from the Rate Year into the GAC year.

Q. Did the Company update its calculation of the commodity-related credit and collection expense?

A. Yes. Exhibit __ (RDP-6), Schedule 3, page 2 shows the updated commodity-related credit and collection expense to reflect the Rate Year revenue requirement. As shown on the exhibit, updated commodity-related credit and collection expenses total for the GAC year is $5,954,225 and the per dekatherm rate is therefore set at $0.03551. Consistent with the current mechanism, the Company will reset the commodity-related credit and collection expenses total per dekatherm charge annually based on the latest sales forecast and reconcile revenues to the target as shown on Exhibit __ (RDP-6), Schedule 3, page 2. Additionally, Exhibit __ (RDP-6), Schedule 2, page 2 summarizes the annual target from Rate Year into the GAC year.

Q. How did the Company calculate the commodity-related uncollectible component of the MFC?

A. As described in the direct testimony of the Customer Panel, the Company determined the uncollectible rate by dividing net charge-offs by the sum of: (i) total non-ESCO revenues; and (ii) ESCO/POR revenue. As shown on Exhibit __ (RDP-6), Schedule 3, page 3, the uncollectible percentage is 0.8388 percent.

Q. Did the Company update its calculation of the commodity-related uncollectible account expense?

A. Yes. An example of the calculation is set forth on Exhibit __ (RDP-6), Schedule 3, page 4. The unit rate is determined monthly by multiplying the GAC rate for each service classification by the uncollectible percentage. In addition, Exhibit __ (RDP-6), Schedule 3, pages 5 and 6 show the calculation of the commodity-related uncollectible account expense for the Rate Year and the GAC year.

Q. Did the Company update its calculation of the return requirement on gas purchase-related working capital?

A. Yes. An example is set forth on Exhibit __ (RDP-6), Schedule 3, page 7. To arrive at the working capital percentage related to purchased gas, the Company multiplied the "lead-lag" percentage by the Company's pre-tax weighted average cost of capital ("WACC"). In addition, Exhibit __ (RDP-6), Schedule 3, pages 8 and 9 show the calculation of the total return requirement on gas purchase-related working capital expense for the Rate Year and GAC year total.

Q. Did the Company update its return requirement on gas storage inventory target?

A. Yes. An example of the calculation is set forth on Exhibit __ (RDP-6), Schedule 3, page 10. The Company updated the return requirement on gas storage inventory target based on the latest storage cost forecast. The pre-tax WACC has been updated in the calculation as well.

Q. Please describe how the Company proposes to convert the proposed MFC annual expense targets from a Rate Year to a GAC Year basis.

A. The Company will initially reset (i) the Gas Supply Procurement target, (ii) Commodity-related Credit and Collection Expenses targets, and (iii) Return Requirement on Gas Storage Inventory effective April 1, 2024. Then, going forward, the Company will reset these targets annually based on the latest sales forecast every September 1, and reconcile the revenue to target, effective the following January of each year. The initial five-month target for April 2024 through August 2024 will be added to the over/under recoveries for the period September 1, 2023, through March 31, 2024. An illustrative example of the stub period reconciliation is set forth on Exhibit __ (RDP-6), Schedule 4.

X. Revenue Decoupling Mechanism

Q. Please describe the Company's current RDM.

A. Under the Company's current RDM, a revenue per class target is set for delivery service revenues from SC 1A – Residential Non-Heat, SC 1B – Residential Heating, SC 2 and SC 3 customers and actual revenues are trued up against those revenue per class targets annually each rate year.

Q. Is the Company proposing to modify its RDM?

A. Yes. The Company is proposing to update the annual RDM targets to reflect the proposed changes in delivery rates and billing service fees. Exhibit __ (RDP-7) shows an illustrative example of the RDM calculation.

XI. Electric Generator Revenue

Q. Please describe the Company's current treatment of electric generator revenue.

A. The Company credits 100 percent of the revenues from electric generators to the Company's revenue requirements to reduce delivery rates to firm sales and firm transportation customers. The Company reconciles the difference between the electric generator revenues included in the Company's revenue requirements and the actual revenues it recovers from the electric generators at the end of each rate year. Any difference is either

credited or surcharged to firm sales and firm transportation customers through the delivery rate adjustment ("DRA") for the twelve-month period starting July 1.

Q. Is the Company proposing to update the electric generator targets?

A. Yes. The Company is proposing to update the electric generator revenue targets to reflect the average revenue received from electric generators in the last two calendar years. Exhibit __ (RDP-14) shows the updated revenue targets.

Q. Is the Company proposing any changes to the rates applicable to electric generators as a result of the Statewide Electric Generator Proceeding?

A. No. The Company is not proposing any changes to the electric generator rates in this proceeding. To the extent that an Order is issued in Case 17-G-0011, the Company will incorporate the changes at that time.

XII. Newtown Creek Project

Q. What is the Newtown Creek Project?

A. As explained in KEDNY's Gas Infrastructure and Operations Panel ("GIOP") testimony, the Newtown Creek Project is a renewable natural gas

("RNG") facility located at the Newtown Creek Wastewater Treatment Plant in New York City. KEDNY is capturing the biogas generated from the wastewater plant, which consists of approximately 60 percent methane and 40 percent carbon dioxide, filtering it through a purification facility, and upgrading it to pipeline quality natural gas. The RNG is then odorized and injected into the gas system for direct use by customers. The Company has contracted with a firm to market and monetize environmental credits generated from the project.

Q. How will the Company handle any revenues received from the Newtown Creek Project?

A. The Newtown Creek Project will generate revenues from the sale of gas and sale of environmental attributes. The Company's revenue forecast, as shown in Exhibit __ (RDP-2), includes revenues of approximately $5.962 million for the Rate Year and $6.791 million, $7.355 million and $7.890 million for Data Years ending 2026, 2027 and 2028, respectively. The Rate Year revenue forecast of $5.962 million represents approximately $0.638 million from the sale of the gas and $5.324 million from the sale of environmental attributes. Because there is uncertainty with the forecast revenues from this recently commissioned project (March 2023) and to ensure that customers receive the potential revenue benefits under the

contract between National Grid and New York City, the Company proposes to true-up the actual revenues and defer the difference for future recovery/credits. As further explained in the testimony of the GIOP, any revenues realized above the level necessary to fully reimburse customers for the project costs must be shared equally between customers and the City of New York.

XIII. Low-Income Rate Design

Q. Is the Company planning to make any changes to the design of Low-Income rates?

A. Under the current rate design, low-income customers (*i.e.*, customers eligible for EAP discounts) pay the same base delivery rates (before the EAP discounts) as standard residential customers. The ECOSS includes all residential customers in one class and the EAP discounts are calculated in accordance with the Commission's Order issued in Case 14-M-0565. While the Company is not proposing any changes to the design of low-income rates or discounts at this time, the Company believes that there is value in further studies related to low-income customer rates and discounts. Therefore, in coordination with Staff and other stakeholders in the Energy Affordability Policy Working Group, the Company will consider potential

new rate design elements that would benefit low-income customers and support any information requests or proposed studies on these issues.

XIV. Climate Leadership and Community Protection Act

Q. Please describe how the Company's rate design supports the goals of CLCPA.

A. The Panel's rate design proposals include modest changes to the rate design for certain service classes to promote energy efficiency by gradually moving away from declining block rate structures. Moving away from declining block rate structures is expected to encourage greater energy efficiency for customers as the tail block rates will increase by more than the preceding block rates.

Q. Is the Company proposing any changes related to its current EAMs?

A. Yes. The CLCPA Panel testimony proposes to continue two of the current EAMs established in the 2019 KEDNY and KEDLI Rate Cases, and add two new EAMs, for a total of four. The CLCPA Panel proposes to continue the two existing Energy Efficiency EAMs: Gas Share the Savings and Gas Low-and-Moderate Income ("LMI"); and proposes a System Efficiency EAM: Gas Demand Response ("DR"), as well as an LMI Engagement

EAM: EAP Enrollment. These EAMs are further discussed in the CLCPA Panel testimony.

Q. How does the Company propose to recover the EAM incentives?

A. The Company proposes to recover any earned EAM incentives through its existing EAM surcharge mechanism. The Company proposes to continue to allocate the two current Energy Efficiency EAMs: Gas Share the Savings and Gas LMI using a gas deliveries allocator. The Company proposes to allocate the LMI Engagement EAM: EAP Enrollment using a gas deliveries allocator. The Company proposes to allocate the System Efficiency EAM: Gas DR using a peak sendout allocator. Exhibit __ (RDP-10) provides an illustrative calculation of the EAM surcharge using the proposed allocators.

XV. <u>Gas Safety and Reliability Surcharge</u>

Q. Is the Company proposing any changes related to its current GSRS mechanism?

A. The Company's current GSRS mechanism allows the Company to recover incremental proactive Leak-Prone Pipe ("LPP") replacements costs up to 102 percent of the rate allowance unit cost, any earned leak repair Positive Revenue Adjustment ("PRA") and incremental leak repair costs. The

Company proposes to modify its existing GSRS to allow recovery for an LPP unit cost incentive as discussed in the GIOP testimony.

XVI. Non-Firm Demand Response

Q. Please describe the Company's proposal for a Non-Firm gas supply cost reconciliation mechanism?

A. In accordance with the Joint Proposal in the 2019 KEDNY and KEDLI Rate Cases, the Company is required to develop and propose a NFDR gas cost reconciliation mechanism to be included in this base rate filing. The Company has a combined Firm and Non-Firm gas supply portfolio (KEDNY and KEDLI) and cannot separately reconcile NFDR customer gas supply costs. Therefore, the Company is proposing to include the gas supply costs incurred to serve NFDR sales customers and their revenues in the Company's annual GAC reconciliation excluding NFDR penalties.

Currently, the annual GAC reconciliation makes an adjustment to exclude the NFDR revenues from the actual purchase gas expense. The difference between the total adjusted GAC revenue and the total purchased gas expense represents the GAC year over/under collection. The over/under collection is then divided by firm customer annual sales to derive the annual

cost of gas imbalance surcharge or refund and shown on the Statement of Monthly Cost of Gas and Adjustments ("GAC Statement").

The Company is proposing to include NFDR revenues – discontinuing the current process of removing the NFDR revenues from the actual purchase gas expense – in its annual GAC reconciliation filing. NFDR penalties will be removed from the annual GAC reconciliation filing and separately reconciled on an annual basis based on the GAC year. The over/under collection from both firm and NDFR sales will be calculated and refunded or surcharged to firm and NFDR customers through a volumetric rate included on the GAC statement for firm customers and the NFDR Statement for NFDR customers. NFDR penalties will be separately reconciled each GAC year and included in the adjustment section of the GAC statement through a volumetric rate. Exhibit __ (RDP-13) shows an illustrative NFDR Gas Cost Reconciliation as compared to the GAC year reconciliation included in the 2022 annual filing.

Q. Is the Company proposing any corresponding changes to the System Performance Adjustment ("SPA") reconciliation mechanism?

A. Yes. The SPA reconciliation compares actual system LAUF to the LAUF targets established in a rate case proceeding. Currently, the Company does

not recover or refund the SPA surcharge/refund from NFDR sales or transportation customers. The Company proposes to surcharge or refund the SPA to all firm and NFDR sales and transportation customers to be consistent with the Company's firm sales and transportation customers. The SPA rate will be included in the adjustment section of the NFDR Statement for sales customers and in the delivery rate adjustment section of the NFDR statement for transportation customers.

Q. Is the Company's non-firm gas cost reconciliation proposal in accordance with Staff's white paper on LAUF?

A. No. Staff's white paper on LAUF excludes NFDR gas customers from the SPA. However, the Company is proposing to include the NFDR sales and transportation customers as part of the SPA surcharge or refund under this proposal because the Company does not believe it is appropriate to assess the GAC to NFDR customers without applying the corresponding SPA surcharge or refund because the LAUF factor impacts the GAC rates.

Q. When would the proposed changes to the annual GAC reconciliation and NFDR penalties reconciliation mechanisms be implemented?

A. The proposed changes to the annual reconciliation mechanisms will be implemented commencing the first full GAC year (*i.e.*, September 1 to –

August 31) after rates are approved by the Commission in this rate proceeding. For example, if new delivery rates become effective on April 1, 2024, the proposed changes to the reconciliation mechanisms would be implemented for the GAC year period September 1, 2024 through August 31, 2025, with the annual cost of gas imbalance surcharge or refund, SPA surcharge or refund and NFDR penalties reconciliation effective January 1, 2026.

Q. Please describe the Company's current NFDR reconciliation.

A. The Company currently reconciles NFDR delivery service revenues by comparing to targets set in the 2019 KEDNY and KEDLI Rate Cases. Any over/under recoveries are surcharged/credited to all firm customers.

Q. Is the Company proposing to modify its NFDR Revenue reconciliation targets?

A. Yes. The Company is proposing to update the annual NFDR revenue targets to reflect the proposed changes in delivery rates.

XVII. Proposed Modifications to Tariff Services, Fees, and Provisions

Q. Is the Company proposing to make any changes to the service classifications, fees, or other provisions in its Tariff?

A. Yes, the Company is proposing the following changes to its Tariff:

- Modify the Tariff to:
  - Add a new Rate Adjustment Mechanism ("RAM") surcharge for certain deferral balances for the recovery/refund from/to customers during the rate plan;
  - Eliminate the Peak Reduction EAM; and add two new EAMs - (1) the System Efficiency EAM: Gas DR, and (2) the LMI Engagement EAM: EAP Enrollment;
  - Update the GSRS language to include the proposed unit cost incentive;
  - Eliminate the DCSM as of July 1, 2024;
  - Remove the Value Added Charge cap;
  - Add clarity on penalties related to unauthorized use during periods of curtailment for electric generators;
  - Modify Tariff provisions to reflect the NFDR gas cost annual reconciliation proposal;

- Modify the Tariff for consistency for the Revenue Tax Surcharge statement to be filed on not less than 15 days as opposed to 15 business days; and
- Update Tariff provisions relating to the termination date of the Late Payment Charges and Other Waived Fees Surcharge ("LPCO"), effective July 1, 2026.

- Update the following Tariff fees:
  - Unproductive Field Visits;
  - Reconnect Fees at the Meter; and
  - Reconnect Fees at the Street.
- Update the paperless billing credit;
- Update the consolidated billing charge; and
- Update the Area Development Rate ("ADR")/Business Incentive Rate ("BIR") term language

A. <u>Modifications to Gas Tariff Provisions</u>

Q. Please describe the new proposed RAM mechanism designed to recover/pass back deferral balances from/to customers during the Rate Year.

A. The Company is proposing a new RAM to recover costs from or pass back credits to customers on a more timely basis. The RAM would consolidate

multiple deferral balances into one single surcharge for certain items that are currently deferred and for new deferral mechanisms proposed in this case. The RAM will include the new Uncollectible Expense reconciliation (discussed in the Customer Panel testimony), the Property Tax reconciliation mechanism (discussed in the Revenue Requirement Panel testimony), the EAP reconciliation (discussed in the Customer Panel testimony), the Late Payment Charge Revenue reconciliation (discussed above), the No Fee Credit/Debit Card reconciliation (discussed in the Customer Panel testimony), and the Long-Term Debt reconciliation (discussed in the Capital Structure Panel testimony). Additionally, the first year of the proposed RAM surcharge will include the linking period (January 2023 – March 2024) amounts for any existing deferrals as well as any fiscal year ending March 2024 incremental Energy Efficiency program costs. The Company also envisions that the RAM would be used to recover additional deferrals that may be authorized by the Commission in the future consistent with the operation of similar such mechanisms at other New York State utilities.

Q. Please describe the proposed allocations for the deferrals being included in the RAM mechanism.

A. The Company is proposing to use the WriteOff_Del allocator for the Late Payment Charge reconciliation and Uncollectible Expense reconciliation. The incremental energy efficiency costs will be allocated using the Gas Deliveries allocator. The remaining deferrals will be allocated using the Total Revenue allocator.

Q. Please describe the proposal to eliminate the DCSM surcharge.

A. The Company is proposing to eliminate the multi-component cost recovery DCSM surcharge effective July 1, 2024. The DCSM surcharge was established in the 2019 KEDNY and KEDLI Rate Cases to recover three cost components: 1) Demand Response program costs; 2) Incremental NE:NY Energy Efficiency program costs (capped at the cumulative 2019-2025 budget amounts unless the Commission authorizes additional budgets following the Interim Review in the NE:NY proceeding); and 3) the revenue requirement associated with Long-Term Capacity Projects excluded from base delivery rates. In addition to the DCSM surcharge, in the 2019 KEDNY and KEDLI Rate Cases, the Non-Labor Demand Response Operation & Maintenance Cost ("DROM") surcharge was established to recover the non-labor demand response operation and maintenance program

costs. In this case, the Company proposes to recover all demand response program costs through the DROM surcharge and include the revenue requirement associated with the Long-Term Capacity Projects currently collected through the DCSM in base delivery rates. The true-up portion of fiscal year 2024 demand response costs that would have been collected through the DCSM effective July 1, 2024, are proposed to be recovered through the DROM effective July 1, 2024. The Company also proposes to recover incremental energy efficiency program costs deferred through March 31, 2024 through the RAM effective June 1, 2024.

Any over or under collections of the DCSM deferral balance through June 30, 2024, would remain on the Company's books with carrying charges at the pre-tax WACC for future recovery or refund to customers as determined by the Commission.

Q. Please explain the reason for proposing a change to the filing date for the Revenue Tax Surcharge ("RTS") statement?

A. Currently, the Tariff indicates that the RTS should be filed 15 business days before the effective date. The Company proposes to modify the Tariff so that the RTS statement would be filed on not less than 15 days as opposed to 15 business days. This change will make the RTS consistent with other

surcharges in the Tariff that are based on calendar days as opposed to business days.

Q. Please explain the reason for proposing to eliminate the Value Added Charge ("VAC") cap in the Tariff for the Electric Generators?

A. In accordance with the Company's Tariff, the sum of the per dekatherm charges (On-System Transportation Charge, VAC and Daily Balancing Service Demand Charge) for Electric Generators may not exceed the per dekatherm charge of the otherwise applicable interruptible transportation service. Because the Company is proposing to further reduce the NFDR delivery rates, the Company proposes to eliminate the cap for the VAC to Electric Generators in order to mitigate any large over or under VAC reconciliation balances. In addition, removing the VAC cap would also mitigate final VAC balances owed, if any, by Electric Generators if the Commission approves the elimination of the VAC in its Statewide Electric Generator proceeding in Case 17-G-0011.

Q. Please explain the Company's proposal to modify the penalty for unauthorized use during periods of curtailments for Electric Generators in the Tariff ?

A. The Company is proposing to modify the Tariff language relating to penalties associated with unauthorized gas use during periods of curtailments on Leaf 64 of the Company's Tariff to clarify applicability of penalties for Electric Generators served under Service Classification ("SC") No. 20, Non-Core Transportation Service for Electric Generation. Leaf 64, section F sets forth a penalty for unauthorized use during a curtailment period of $25.00 per dekatherm of excess usage in addition to the incremental cost of gas.

In addition, Leaf 427.10 states, "The Company reserves the right to impose a penalty charge for unauthorized overruns. When service hereunder is interrupted by the Company in accordance with the terms of the Customer's service agreement, gas consumed subsequent to such interruption and without specific authorization by the Company will be subject to an additional charge of $100.00 per dth. The imposition of such additional charge shall not limit any rights of the Company to terminate gas service provided for in the Customer's service agreement."

To avoid the assessment of multiple penalties, the Company proposes a modification to exclude Electric Generators from the $25.00 per dekatherm penalty, in addition to the incremental cost of gas, for excess usage during a curtailment period. Electric Generators will continue to be assessed the $100 per dth penalty for unauthorized use as stated under the SC 20 tariff, Leaf 427.10.

Q. Does the Company propose any changes to the current GSRS?

A. Yes. The Company proposes to expand the current GSRS mechanism to include recovery of the LPP unit cost incentive as described in the GIOP Panel testimony.

Q. Does the Company propose any changes to the current LPCO surcharge mechanism?

A. Yes. In accordance with Commission Order in Case 17-E-0238, et al., the LPCO surcharge was established to recover late payment charge revenues and other waived tariff fees that were not recovered from customers as a result of the COVID pandemic, but the tariff fee revenues were imputed in the rate allowance under the Company's current rate plan. KEDNY was authorized to recover the unbilled fees, net of savings, for Rate Year 1 (Fiscal Year ending March 31, 2021) and to surcharge or surcredit deferred

unbilled fees, net of savings, for Rate Years 2 and 3 (Fiscal Years ending March 31, 2022 and 2023, respectively). The LPCO collection periods for the deferred unbilled fees, net of savings, for fiscal years 2021, 2022 and 2023 (or net surcredits for fiscal years 2022 and 2023) are July 1, 2022 - June 30, 2023, July 1, 2023 – June 2024, and July 1, 2024 – June 30, 2025, respectively. Therefore, based on the final LPCO collection period and authorized deferral treatment of unbilled fees, net of savings, the Company proposes to eliminate the LPCO surcharge mechanism effective July 1, 2025. The Company will continue to accrue carrying charges at the pre-tax WACC on any remaining deferral balance as of June 30, 2025.

Q. Does the Company propose any updates to its ADR/BIR programs?

A. Yes. The Company is proposing to extend the term of the ADR/BIR programs to the end of the Rate Year.

B. <u>Tariff Fee Updates</u>

Q. Does the Company propose to update any of its Tariff fees?

A. Yes. The Company proposes to update the unproductive field visit charge, reconnect at the meter charge, and reconnect at the street charge. The calculations supporting these tariff fees are in Exhibit __ (RDP-8), Schedule 1.

C. Paperless Billing Credit

Q. Please explain the current paperless billing credit.

A. The current paperless billing credit is $0.43 per service period for all customers who receive their bill electronically. The credit is based on Historic Test Year costs adjusted for inflation and represents the difference in cost to produce a paper bill versus producing an electronic bill. The paperless billing credit consists primarily of the cost of paper, postage, and envelopes offset by electronic billing costs.

Q. Is the Company proposing to change the current paperless billing credit?

A. Yes, the Company proposes to update the paperless billing credit to $0.48 per service period. The calculation is detailed in Exhibit __ (RDP-8), Schedule 2.

Q. Is the Company proposing to change the current consolidated billing charge?

A. Yes, the Company proposes to update the consolidated billing charge to $1.20 per service period. The calculation is detailed in Exhibit __ (RDP-8), Schedule 3.

XVIII. Commitments from 2019 KEDNY and KEDLI Rate Cases

A. Non-Firm Gas Cost Reconciliation Mechanism

Q. Is the Company proposing a non-firm gas cost reconciliation mechanism, as agreed to in the 2019 KEDNY and KEDLI Rate Cases?

A. Yes, as discussed in detail earlier in the Panel's testimony, the Company is proposing a non-firm gas cost reconciliation mechanism as required in the Joint Proposal adopted by the Commission in the 2019 KEDNY and KEDLI Rate Cases.

B. ECOSS 100 Percent Demand

Q. Has the Company performed an ECOSS using 100 percent demand classification for mains?

A. Yes, the study is presented in Exhibit __ (RDP-12), Schedule 1. In the 2019 KEDNY and KEDLI Rate Cases, the Company agreed to submit a study for illustrative purposes only. The Company does not agree that mains should be classified as 100 percent demand-related and believes its classification of mains as presented in Exhibit __ (RDP-3) is appropriate.

C. Sales and Revenue Forecast

Q. Did the Company make any changes to its methodology for developing its sales and revenue forecasts?

A. Yes, as discussed above, to develop its sales and revenue forecast, the Company used a three-year historical average of actual billed block percentages, rather than the ogive analysis used in the previous rate case. As required by Section 3.23 of the Joint Proposal adopted in the 2019 KEDNY and KEDLI Rate Cases, the Company met with Staff prior to filing its testimony in this proceeding to discuss potential options for forecasting its sales and revenue in this proceeding.

XIX. Gas Marginal Cost Study

Q. Please provide an overview of the Gas Marginal Cost Study.

A. The purpose of the MCS, presented in Exhibit __ (RDP-9), is to compute the incremental, or marginal, cost to the utility to provide the next unit of service (*i.e.*, the next dekatherm of design-day demand or the next customer connected). As shown on Exhibit __ (RDP-9), Schedule 1, line 10, the Marginal Delivery Cost is $1.49 per annual dth. Customers participating in the Company's Excelsior Jobs Program ("EJP") pay the marginal delivery cost rate for all gas consumption in excess of the consumption included in the applicable minimum charge. The EJP rates are shown on Exhibit __

(RDP-9), Schedule 1A. Because NE:NY program costs are in base rates but not included in the EJP rates, EJP customers will be charged an energy efficiency program rate in addition to the marginal rate so that they continue to be eligible to participate in Company-sponsored energy efficiency programs.

Q. What are the components of marginal costs in the MCS?

A. The MCS includes the capital cost of the assets needed to serve an additional unit of design-day demand, as well as the O&M costs related to the assets.

The initial capital cost is developed by quantifying the relationship between capital spending for growth, and the growth (additional dekatherms delivered) supported. The initial capital cost is converted to an annual cost, representing the amount that would be included in the annual revenue requirement to reflect the return on rate base plus associated income tax, depreciation expense, property tax and insurance.

In addition to the annualized capital cost and the associated O&M costs, the marginal cost includes property tax and insurance costs related to the assets. The Marginal Demand Cost is stated in dollars per delivered dekatherm.

XX. Levelized Rate Increases

Q. Does the Company support levelizing the proposed rate increases over term of a potential multi-year rate plan?

A. Yes. To ease the impact on customer bills, the Company will consider options to phase-in the proposed revenue increases over the term of a multi-year plan.

Q. Does this conclude the Panel's testimony?

A. Yes, it does.

The Brooklyn Union Gas Company d/b/a National Grid NY
Embedded Cost of Service Study (ECOSS) Methodology

INTRODUCTION

The testimony of the Rate Design Panel describes the purpose of performing an Embedded Cost of Service Study ("ECOSS"), and summarizes the methodology used to prepare the ECOSS in this proceeding. The testimony describes the three-step ECOSS process (functionalization, classification, class allocation) used to analyze each element of the revenue requirement, in order to assign or allocate it among the rate classes.

This Schedule 9 describes the ECOSS methodology in more detail. Part 1 describes the three-step ECOSS process.

Part II describes how each element of the revenue requirement- rate base, expense and revenue- was assigned or allocated in each of the three steps. Plant, expenses and revenues are identified using the Uniform System of Accounts (FERC Accounts). Part II serves as a guide when reviewing the other schedules in this exhibit.

Part 1. DETAILED ECOSS METHODOLOGY

The purpose of an ECOSS is to apportion fairly a utility's total revenue requirement, including plant and other investments, operating expenses, depreciation, and taxes among the rate classes served by the utility. The ECOSS computes for each rate class the revenue to be collected in order to produce the overall required rate of return on rate base. This information provides valuable guidance in revenue allocation, and in the development of rates, to recover the revenue requirement from all rate classes.

The three steps of the ECOSS are:

> Functionalization- Cost elements are separated among the utility's basic service functions, by determining what physical purpose each cost element serves. KEDNY's functions are: Gas Supply and Storage; Transmission; Distribution; Metering and Billing; Collections; Sales Promotion; and Procurement.
>
> Classification- Each functionalized cost elements is classified according as Customer-related (connects customers to the distribution system); Demand-related (meets design day capacity requirements) or Commodity-related (Deliver gas commodity to customers).
>
> Class Allocation- Cost elements that have been functionalized and classified are allocated among the service classes, using an appropriate allocation factor for each cost element. Allocation factors can be external (e.g., number of customers, deliveries, design day requirements sales and historical bad debt experience) or internal (e.g., property insurance is based on plant investment).

The Brooklyn Union Gas Company d/b/a National Grid NY
Embedded Cost of Service Study (ECOSS) Methodology

Part 2. ALLOCATOR FOR EACH ELEMENT OF THE REVENUE REQUIREMENT

A. Rate Base

1. Intangible Plant *(FERC Accounts 301-303)*

Primarily capitalized software costs for new and updated financial and operating systems. Allocated in proportion to plant investment, based on a review of the applications that Intangible Plant comprises.

2. LNG / Storage Plant *(FERC Accounts 360-363)*

Assets needed to meet design day and seasonal requirements. LNG and Storage plant are classified as Demand. Storage is allocated based on seasonal (winter) requirements to all customers; LNG is allocated to all firm customers.

3. Transmission Plant *(FERC Accounts 365-368)*

Transmission plant moves natural gas from suppliers to the distribution system, and is sized to meet design day requirements. Classified as Demand and allocated based on class design day requirements.

4. Distribution Plant *(FERC Accounts 374-386)*

Mains- Distribution mains connect customers to the distribution system (i.e., customer-related) and provide capacity to meet design day customer requirements (i.e., demand-related). Therefor the cost of mains is classified as partly customer-related and partly demand-related.

The minimum size main was determined to be 2-inch plastic. For the most recent period, the minimum-system ratio was estimated to be 47.88 percent. For the ECOSS, the Company averaged the results of this study and the two prior studies, to promote stability and to broaden the period of data used in the study. The resulting customer component of mains, the portion of cost to connect customers without regard to design-day demands (*i.e.*, customer-related costs), was estimated to be 44.29 percent and the demand component 53.71 percent.

The customer component was allocated among the classes based on the number of customers. The demand component was allocated among the classes based on design-day requirements.

Non-Firm Mains- Additional costs incurred to connect Non-Firm Demand Response (formerly Temperature Controlled or Interruptible) customers were identified. The portion representing mains extensions was directly assigned to the Non-Firm classes.

The Brooklyn Union Gas Company d/b/a National Grid NY
Embedded Cost of Service Study (ECOSS) Methodology

Measuring & Regulating Equipment- Sized for design day operation, therefore classified as demand-related and allocated among the rate classes based on design-day requirements. *Industrial equipment* is allocated among the non-residential classes.

Services- Services connect the customer to the distribution mains. There is a direct correspondence between number of customers and number of services[1], therefore services are classified as customer-related. The costs are allocated based on the current cost for a typical service line for each rate class.

Meters- Meters (including installation costs and house regulators) are classified as customer-related, and allocated based on the current cost for a typical meter for each rate class.

Land, Structures and Improvements and Other Distribution Plant- Allocated in proportion to all other Distribution Plant accounts.

5. General Plant *(FERC Accounts 389-399)*

Primarily Structures & improvements; Tools, shop & garage; and Office furniture and equipment. General plant was functionalized, classified and class allocated in proportion to the direct labor content of operating and maintenance expense, because these assets primarily support direct labor.

6. Depreciation Reserve *(FERC Accounts 108 and 111)*

Each component was allocated in proportion to the corresponding asset cost.

7. Other Rate Base Items

Each component was allocated in proportion to the corresponding asset cost.

Materials & Supplies (which includes prepayments) and Cash Working Capital (non-supply) were allocated in proportion to non-gas O&M costs. Accumulated Deferred Income Tax and CWIP were allocated in proportion to plant in service. Regulatory Assets and Earnings Base Adjustment were allocated in proportion to rate base. Storage Gas was allocated based on seasonal (winter) requirements. Cash Working Capital (supply) was allocated in proportion to gas deliveries.

B. Expenses

1. Gas Costs *(FERC Accounts 804-813)*- Allocated in proportion to GAC revenue

[1] This is not a 1:1 correspondence; an adjustment is made for multiple-account premises.

The Brooklyn Union Gas Company d/b/a National Grid NY
Embedded Cost of Service Study (ECOSS) Methodology

2. LNG / Storage Plant O&M *(FERC Accounts 840-849)*- Allocated in proportion to LNG and / or Storage plant (as described above).

3. Transmission O&M *(FERC Accounts 850-867)*- Allocated in proportion to Transmission plant (classified as Demand and allocated based on class design day requirements)

4. Distribution O&M *(FERC Accounts 870-894)*

   Mains, Services, Meters, Regulating Equipment- Allocated on the same basis as the assets to which they relate.

   Operations Supervision & Engineering and *Operations Supervision & Engineering*- Allocated based on direct labor content of O&M accounts.

   Customer Installations and Other O&M - Allocated based on a special study to identify the activities reflected in each account.

5. Customer Accounts Expenses *(FERC Accounts 901-919)*

   These accounts were functionalized among Collections, Billing and Distribution based on a study of competitive functions performed by the utility. The accounts are all customer-related.

   Supervision (Account 901)- Allocated in proportion to Customer records and collections (Account 903).

   Meter reading (Account 902)- Allocated based on the investment in meters.

   Customer records and collections (Account 902)- Billing-related activities are Print and mail bills, and Bill calculation. Collections-related activities are a portion of Call center, Credit & collections, Collections and Field Collections. Distribution-related activities are the balance of Call center, Credit & collections, Collections, Field Collections and Payment processing as well as Postage outbound and Postage inbound.

   Each functionalized activity was allocated among the rate classes using an appropriate allocation factor, and the results were summed to compute allocators for Account 903- Distribution, Account 903- Billing and Account 903- Collections.

   Uncollectible accounts expense (Account 904)- Allocated based on historical write-off experience.

   Miscellaneous customer accounts (Account 905)- Activities are primarily customer contact; allocation based on number of customers.

The Brooklyn Union Gas Company d/b/a National Grid NY
Embedded Cost of Service Study (ECOSS) Methodology

Customer assistance expenses (Account 908) and *Information & instructional (Account 909)*- Primarily costs for energy efficiency programs; allocated in proportion to firm delivery volumes.

Demonstration & selling ((Account 912) and *Advertising (Account 913)*- Allocated based on Gas delivery volumes.

6. Administrative & General expenses *(FERC Accounts 920-939)* are grouped as follows:

- Most A&G expenses are labor-related, and are functionalized, classified and allocated in proportion to direct labor content of O&M accounts.
- Plant-related expenses are functionalized, classified and allocated in proportion to according to gross plant.
- Franchise requirements (Account 927) and Regulatory commission expense (Account 928) are functionalized to Distribution, classified as Demand and allocated based on Rate base.
- Miscellaneous General Expenses were allocated based on firm deliveries.

7. Depreciation and Amortization Expense *(FERC Accounts 403-407)*

Each component was allocated in proportion to the corresponding asset cost.

8. Taxes other than on income

Property taxes were allocated in proportion to plant, excluding services and meters. Payroll taxes were allocated in proportion to direct labor content. Other taxes were allocated in proportion to plant.

9. Income Taxes

Income Taxes were allocated in proportion to Pretax income.

C. Revenue

Revenue was functionalized and classified based on revenue requirements and allocated based on forecast revenue at present rates in the Historic Test Year.

Rent from gas property was allocated based on design day demand, reflecting the assets that give rise to the revenue. Late payment revenue was allocated based on historical write-off experience. Billing to ESCOs, which is on a per-customer basis, was allocated based on number of customers. Other Revenues were allocated based on gas deliveries. Joint Facilities revenue was allocated based on design day requirements.

Non-Firm Demand Response Gas Cost Reconciliation Illustrative Example

The Brooklyn Union Gas Company d/b/a National Grid, NY
Illustrative Example - Non-Firm Demand Response Gas Cost Reconciliation
Annual GAC Imbalance Calculation
12 Months Ended August 31, 2022

	Illustrative with Non-Firm	Filed 11/10/2022	Difference
Revenue:			
GAC Revenue	$732,086,026	$677,616,057	$54,469,969
Inter-dept Sales Credit			
Balancing	$22,386,816	$22,386,816	$0
Off-System Sales	$43,698,626	$43,698,626	$0
Transition Surcharge	$0	$0	$0
Wholesale Margin			$0
Marketer's Delivery Penalty Refunds	$158,451	$158,451	$0
Non-Firm Demand Response Penalty Refunds [1]		$1,292,521	($1,292,521)
Cashouts	$1,886,540	$1,886,540	$0
Total Adjusted GAC Revenue	$800,216,458	$747,039,009	$53,177,449
Expense:			
Actual Gas Expense	$787,398,540	$732,928,570	$54,469,969
GCIM			$0
ISS Gas Expense			$0
R&D			$0
Pipeline Refunds	($442,951)	($442,951)	$0
Gas Supplier Refunds			$0
Refunds less than $10 K			$0
Total Adjusted Purchased Gas Expense	$786,955,588	$732,485,619	$54,469,969
Current Period (Over) Under Collection	($13,260,870)	($14,553,390)	$1,292,521
LAUF Adjustment	$3,203,085	$2,966,199	$236,886
Monetary inactive account adjustment	($405,463)	($405,463)	$0
Annual Reconciliation Prior Period	($5,263,869)	($5,263,869)	$0
Total (Over) Under Collection	($15,727,117)	($17,256,523)	$1,529,406
Total Principal Amount Due from Customer	($15,727,117)	($17,256,523)	$1,529,406
Total Interest Amount Due from Customer	($658,048)	($663,937)	$5,889
Total (Refund Amount) Surcharge Amount	($16,385,165)	($17,920,460)	$1,535,295
Forecasted Mcf/ dth Sales	115,458,209 dth	104,737,730	10,720,479
Principal Rate (Refund) Surcharge $/dth	($0.1362)	($0.1648)	$0.0286
Interest Rate (Refund) Surcharge $/dth	($0.0057)	($0.0063)	$0.0006
Total Rate (Refund) Surcharge $/dth	($0.1419)	($0.1711)	$0.0292

Notes
[1] Non Firm Demand Response Penalties to be reconciled separately and refunded to firm sales customers.

The Brooklyn Union Gas Company d/b/a National Grid NY
Illustrative Example - Non-Firm Demand Response Gas Cost Reconciliation
Calculation of LAUF Adjustment and SPA Surcharge / Credit
Period: Sept 1, 2021 to Aug 31, 2022

	Illustrative with Non-Firm
Actual LAUF	1.936%
LAUF Target	2.369%
Upper Dead Band	3.369%
Lower Dead Band	1.369%
Average Commodity Cost of Gas	
Gas Purchased (less OSS, Cashouts etc) (dt)	107,610,919
Actual Gas Commodity Purchase Costs	$513,900,365
Average Commodity Price ($/dt)	$4.78
Metered Sales & Transportation (After Losses) (dt)	
SC 1, 2, 3, 4A, 4A-CNG, 4B, 7, 14 & 21 Firm Sales	97,975,161
SC 17 Firm Transportation	45,635,052
SC 22 Non Firm Sales	9,541,722
SC 18 Non Firm Transport	1,927,239
Meter Sales & Transportation	155,079,175
LAUF Adjustment to GAC Annual Imbalance	
LAUF Diff: (Target - Actual)	0.433%
Meter Sales & Transportation	155,079,175
Average Commodity Price ($/dt)	$4.78
LAUF Adjustment	$3,203,085
Company's Unrecovered Gas Purchase Costs (Outside the Dead Band)	
LAUF Diff: (Actual - Upper Dead Band Limit)	0.000%
Meter Sales & Transportation	155,079,175
Average Commodity Price ($/dt)	$4.78
Company's Unrecovered Gas Cost	$0
Calculate SPA Adjustment	
LAUF Diff: (Upper Deadband - Target)	-0.433%
Meter Sales & Transportation	155,079,175
Average Commodity Price ($/dt)	$4.78
Current Period SPA	($3,203,085)
Prior Period SPA Balance (excl. Interest) (Page 8, Attachment 1)	($93,811)
Total SPA (Principal)	($3,296,896)
Total Interest on SPA	($101,682)
Total SPA Surcharge / (Refund)	($3,398,579)
Projected Sales & Transportation (dt)	171,401,023
SPA Surcharge (Including Interest) to SC 1, 2, 3, 4A, 4A-CNG, 4B, 7, 14, 17 & 21 ($/dt)	($0.0198)
Calculate Monetary Inactive Account Adjustment (To be included in the Annual Reconciliation Summary)	
Inactive Accounts > 90 days (dt)	84,904
Actual Gas Commodity Purchase Costs	$4.78
Inactive Account Monetary Adjustment	($405,463)

Exhibit ___ (RDP-14)

Electric Generator Revenue Target

The Brooklyn Union Gas Company d/b/a National Grid NY
Annual Electric Generator Revenue Targets

	SC18 Small Electric Generators	SC20 Large Electric Generators	Total
Apr	$478,745	$90,416	$569,161
May	$879,715	$189,607	$1,069,322
Jun	$877,427	$204,035	$1,081,462
Jul	$1,244,619	$537,571	$1,782,190
Aug	$1,265,339	$555,216	$1,820,555
Sep	$985,205	$191,162	$1,176,367
Oct	$864,356	$62,732	$927,087
Nov	$933,316	$36,706	$970,021
Dec	$985,270	$56,828	$1,042,098
Jan	$1,088,063	$114,736	$1,202,799
Feb	$1,126,690	$203,185	$1,329,875
Mar	$1,011,588	$110,228	$1,121,816
Total	$11,740,332	$2,352,422	$14,092,755

Annual Revenue targets to remain the same in each year of the rate plan
