Before the Public Service Commission

THE BROOKLYN UNION GAS COMPANY d/b/a NATIONAL GRID NY
and
KEYSPAN GAS EAST CORPORATION d/b/a NATIONAL GRID

Corrections and Updates Testimony

of

Gas Load Forecasting Panel

Dated: June 30, 2023

Testimony of Gas Load Forecast Panel

Table of Contents

I. Introduction....1

II. Purpose of Testimony....1

III. Overview of the Companies' Retail Gas Deliveries....9

IV. Conclusion....18

I. Introduction

Q. Please identify the members of the Gas Load Forecasting Panel.

A. The Panel consists of Theodore Poe, Jr, Shilpa Sethia, and Thomas Gumbley.

Q. Is this the same Panel that previously submitted direct testimony on behalf of The Brooklyn Union Gas Company d/b/a National Grid NY ("KEDNY") and Keyspan Gas East Corporation d/b/a National Grid ("KEDLI") (collectively, the "Companies") in these proceedings?

A. Yes. The defined terms in the Panel's direct testimony have the same meanings in this corrections and updates testimony.

II. Purpose of Testimony

Q. What is the purpose of your testimony?

A. The purpose of our corrections and updates testimony is to provide updated historic and forecast customer demand data used by the Companies to prepare the forecast of gas revenues and gas costs for the twelve months ending March 31, 2025 ("Rate Year"). The data includes updated historic data through February 2023 and updated forecast data up to and including the Rate Year and the following three years Data Year 1 (ending March

31, 2026), Data Year 2 (ending March 31, 2027), and Data Year 3 (ending March 31, 2028).

Q. Did the methodology to derive the use-per-customer and meter count forecasts change since the initial filing?

A. No. The corrections and updates forecasts use the same methodology, weather profiles, and service and revenue classes as described in the initial filing. The corrections and updates forecast has been updated to include historical sales data through February 2023 instead of October 2022, as well as updated economic data from Moody's (March 2023). The updated data was used to create the new meter count and use-per-meter models discussed in this testimony.

Q. Did the methodology to account for the impact of demand-side management initiatives and local laws/legislation change since the initial filing?

A. The general methodology to account for energy efficiency savings, full electrification, partial electrification, water electrification, Local Law ("LL") 97, LL 154, off-system saturation limits, and low-use upgrades did not change since the initial filing.

The impact of these adjustments has changed because they are either dependent on updated forecasts or the underlying assumptions have been updated. The impacts and updated assumptions for demand-side management and local law/legislation is described below.

In addition, the corrections and updates forecast now includes the impact of the All-Electric Building Act ("AEB Act") included in the State Executive Budget, which is described in detail below.

Q. Is the Panel sponsoring any exhibits as part of its corrections and updates filing?

A. Yes. The Panel sponsors the following exhibits that were prepared by one or more members of the Panel or under their supervision and direction:

Exhibit __ (GLF-1ACU)	KEDNY Fiscal Year Deliveries by Service and Revenue Class for the Period FY2018 - FY2023
Exhibit __ (GLF-1BCU)	KEDLI Fiscal Year Deliveries by Service and Revenue Class for the Period FY2018 - FY2023
Exhibit __ (GLF-2ACU)	KEDNY Average Annual Fiscal Year Use per Customer Based on Total Residential

	Deliveries for the Historical Fiscal Years FY2018 - FY2023 and the Forecast Fiscal Years FY2023 - FY2028
Exhibit __ (GLF-2BCU)	KEDLI Average Annual Fiscal Year Use per Customer Based on Total Residential Deliveries for the Historical Fiscal Years FY2018 - FY2023 and the Forecast Fiscal Years FY2023 - FY2028

III. Overview of the Companies' Retail Gas Deliveries

Q. Please describe the annual forecast deliveries and the year-end customer count forecasts for KEDNY.

A. As shown in Exhibit ___ (GLF-4ACU), KEDNY's forecast of retail gas deliveries (excluding non-core and electric generation volumes) is 1.643 billion therms in FY 2024, rising to 1.715 billion therms in FY 2028. Natural gas deliveries are projected to increase by 18.0 million therms per year or a compound annual growth rate of 1.08 percent per annum.

As shown in Exhibit ___ (GLF-5ACU), KEDNY's forecast year-end customer count (excluding non-core and electric generation) is 1,282,335 in FY 2024, rising to 1,299,748 in FY 2028. Net meter counts are projected to increase by 4,353 meters per year or a compound annual growth rate of 0.34 percent per annum.

Q. Please describe the annual forecast deliveries and the year-end customer count forecasts for KEDLI.

A. As shown in Exhibit ___ (GLF-4BCU), KEDLI's forecast of retail gas deliveries (excluding non-core and large electric generation) is 1.095 billion therms in FY 2024, rising to 1.146 billion therms in FY 2028. Natural gas deliveries are projected to increase by 12.90 million therms per year or a compound annual growth rate of 1.16 percent per annum.

As shown in Exhibit ___ (GLF-5BCU), KEDLI's forecast year-end customer count (excluding non-core and electric generation) is 631,979 in FY 2024, rising to 653,238 in FY 2028. Net meter counts are projected to increase by 5,315 meters per year or a compound annual growth rate of 0.83 percent per annum.

Q. Please describe the updated rate groups forecasts for KEDNY and KEDLI.

A. Please see Exhibits __ (GLF-5ACU) through Exhibit __ (GLF-16BCU) for the projected changes to the residential, commercial, and multi-family customer classes through FY- 2028.

Q. How did the Companies adjust the forecast for sponsored energy efficiency programs?

A. The general methodology for incorporating energy efficiency savings into the forecast has not changed since the initial filing

The annual energy efficiency projections through 2025 are based on the Companies' achieving New Efficiency New York ("NE:NY") goals and no longer reflect the additional savings from the Annual Demand Side Management ("ADSM") Filing Update made in March 2022 (Cases 19-G-

0309 and 19-G-0310). Post-2025, KEDNY and KEDLI's Gross Verified persistent savings level continues to increase by approximately one to five percent annually until the end of the forecast horizon in 2028. Behavioral program contributions to energy efficiency savings through 2025 are based on achievement of NE:NY targets. Post-2025, behavioral savings decrease year-over-year until the end of the forecast horizon in 2028.

Q. How did the Companies adjust the forecasts based on New York City LL 154 and accelerated electrification of new construction outlined in the recently adopted New York State Executive Budget?

A. As noted in direct testimony, the Companies included the impact of New York City LL 154 in their original forecasts.

In May 2023, the New York State legislature passed a State Executive Budget that included the AEB Act, which prohibits installation of gas systems or equipment in new construction buildings up to seven stories (with exceptions for commercial or industrial building greater than 100,000 square feet) beginning in 2026, and in all new buildings from 2029 onwards. The AEB Act does not restrict or prohibit oil-to-gas conversions in existing buildings or low-use upgrades to heating. Like LL 154, the AEB Act allows for exemptions to certain building types,

including manufacturing buildings, commercial food establishments, laboratories, car washes, laundromats, medical facilities, and other critical infrastructure.

The Companies estimated the percentage of new construction customers in the forecasts that would be affected by the newly enacted legislation over the forecast horizon. Given that LL 154 preceded the AEB Act, and that the two pieces of legislations are not drastically different in terms of timelines and exemptions, the Companies continued to model the impact of the legislation in KEDNY and the Rockaways in KEDLI's service territory per LL 154 specifications. The remaining portion of KEDLI's service territory is modeled in accordance with the requirements of the AEB Act. Overall, by FY 2028 in KEDNY and KEDLI, about 40 to 50 percent of the forecast annual meter growth in the residential, commercial, and multi-family customer classes from new construction will be affected by the restrictions in LL 154 and the AEB Act.

Q. How did the Companies adjust their forecasts for New York City LL 97?

A. The Company's assumptions and methodology for LL 97 have not changed since the initial filing.

Q. How did the Companies adjust the forecasts for sponsored heat electrification programs?

A. The Companies' methodologies of accounting for electrification have not changed since the initial filing. However, the Companies received updated electrification outlooks from the electric distribution companies in the KEDNY and KEDLI service territories – Consolidated Edison Company of New York, Inc. ("Con Edison") and the Long Island Power Authority ("LIPA") (administered by PSEG Long Island ("PSEG-LI")). The updated outlooks were used as a foundation to the electrification assumptions in this forecast. A net adjustment was made to forecast customer counts for demand-side management electrification only if the projected heat pump installations were greater than customer losses from the new legislation.

Q. How did the Companies adjust the forecasts for water heating electrification?

A. In KEDNY, expected annual savings from electrification of water heating were developed from Con Edison's forecast electrification of non-space-heating systems. The water heating electrification savings were only explicitly adjusted if they were not captured by Con Edison's space heating savings projections. Explicit adjustments were made for residential, commercial, and multi-family customer classes in KEDNY.

In KEDLI, PSEG-LI provided projected number of heat pump water heaters ("HPWH") for each customer group. If the meter loss due to full electrification was greater than the projected number of HPWH on cumulative basis, no explicit adjustments were made for HPWHs. The annual savings from electrification of water heating were obtained by multiplying PSEG-LI's projected number of HPWH, net of the number of full heat pumps, by the average dekatherms/HPWH, which are 8.2 per year. These expected annual savings from the HPWH installations were subtracted from commercial class gas volumes in KEDLI.

Q. How did the Companies adjust the forecasts for market saturation of oil-to-gas conversions?

A. In their corrections and updates forecasts, the Companies have assumed restrictions on residential, commercial, and multi-family growth from oil-to-gas conversions (for structures that are not currently gas customers). A third-party marketing database was used to identify the location of every non-customer structure in the Companies' service territories. ArcGIS software was used to calculate the distance from each structure to the nearest gas main. The Companies determined the propensity to convert to gas by distance and used this information along with the non-customer

structure location data to estimate an upper limit on future oil-to-gas conversions.

Based on the Companies' analysis, the limit on oil-to-gas conversion growth is not reached in the forecast period of this testimony in either KEDLI or KEDNY. In KEDNY, residential-heating meter growth from oil-to-gas conversions begins to slow in FY 2028 as the market starts to saturate, but the actual ceiling is projected to not be reached until the mid-2030s.

Q. What is the projected impact of demand-side management initiatives and local laws on the forecast customer counts?

A. The customer count forecasts reflect the impact of full electrification from Con Edison's demand-side management programs, LL 154, the AEB Act, as well as slower growth from off-system conversions as the market begins to saturate.

By the end of FY 2028, electrification and slower growth from residential off-system conversions decrease KEDNY's total meter count by 0.62 percent, or 8,114 meters. Residential heating customers account for 85

percent of the total meter loss from electrification (Exhibit ___ (GLF-15ACU)).

By the end of FY 2028, electrification from LL 154 and demand side management programs decrease KEDLI's total meter count by 0.35 percent, or 2,318 meters. PSEG-LI's electrification projections call for larger amounts of partial heat pumps compared to full heat pumps, resulting in lower meter loss from electrification in KEDLI as compared to KEDNY. Off-system saturation is not reached in the forecast horizon in KEDLI.

Q. What is the projected impact of demand-side management initiatives and local laws on the forecast volumes in KEDNY?

A. The forecast retail volumes are impacted by full electrification, partial electrification, LL 97, LL 154, the AEB Act, off-system market saturation, and acceleration in the Companies' energy efficiency programs. By FY 2028, these factors reduced projected retail volumes by 121.3 million therms as shown in Exhibit ___ (GLF-16ACU).

The largest impact on retail volumes come from projected savings from partial electrification at 37.7 million therms through FY 2028. The second

largest impact on retail volumes comes from projected savings from KEDNY's energy efficiency initiatives at 34.0 million therms through FY 2028. It is important to note that this impact reflects only the savings above the historical trend of energy efficiency that is built into KEDNY's historical sales data. LL 97 reduces special contract (Other rate group) customers' load by 30.0 million therms by FY 2028 to ensure these customers, on average, comply with emission limits. Meter loss from demand-side management electrification and the gas bans have the second largest impact at 17.2 million therms by FY 2028. Water heating electrification results in 1.9 million therms in savings by FY 2028. Lastly, slower growth from off-system conversions due to market saturation reduces load by 0.47 million therms in FY 2028 as presented in Exhibit ___ (GLF-16ACU).

Q. What is the projected impact of demand-side management initiatives and local laws on the forecast volumes in KEDLI?

A. The forecast retail volumes are impacted by full electrification, partial electrification, water heating electrification, LL 97, LL 154, the AEB Act, and acceleration in the KEDLI's energy efficiency programs. By FY 2028, these factors reduce projected retail volumes by 34.8 million therms (Exhibit ___ (GLF-16BCU)).

The largest impact on retail volumes comes from projected savings from KEDLI's energy efficiency initiatives at 20.2 million therms through FY 2028. It is important to note that this impact reflects only the savings above the historical trend of energy efficiency that is built into the KEDLI's historical sales data. Partial electrification has the second largest impact at 9.6 million therms by FY 2028. Full electrification from PSEG-LI's demand-side management program and the gas bans reduce load further by 3.7 million therms in FY 2028. LL 97 reduces customers' load on special contracts (Other rate group) by 1.2 million therms in FY 2028 to ensure these customers comply with emission limits on average. Water heating electrification reduces load by 0.07 million therms by FY 2028 as presented in Exhibit ___ (GLF-16BCU).

IV. Conclusion

Q. Does this conclude your testimony?

A. Yes, it does.

INDEX OF EXHIBITS

Exhibit __ (GLF-1ACU)	KEDNY Fiscal Year Deliveries by Service and Revenue Class for the Period FY2018 - FY2023
Exhibit __ (GLF-1BCU)	KEDLI Fiscal Year Deliveries by Service and Revenue Class for the Period FY2018 - FY2023
