Rebuttal Testimony of The Customer Panel

I. Introduction

Q. Please introduce the members of the Customer Panel.

A. The Panel consists of Christopher McCusker, Brittney Pietro, Arlene Gans, Kristin Hess, and Jeffrey Koenig.

Q. Is this the same panel that previously submitted testimony in these proceedings?

A. Yes. The defined terms in the Panel's direct and corrections and updates testimony have the same meanings here unless otherwise indicated.

II. Purpose of Testimony

Q. What is the purpose of the Panel's rebuttal testimony?

A. The purpose of our rebuttal testimony is to address certain issues addressed in the testimony of the Department of Public Service Staff ("Staff") and intervenors dated September 1, 2023. These issues include:

(i) the recommendation of the Staff Consumer Services Panel ("SCSP") and Department of State Utility Intervention Unit ("UIU") witness Gregg C. Collar concerning the Customer Service Quality Program/Customer Service Performance Indicators ("CSPIs");

(ii) the SCSP's request for data regarding estimated customer bills;

(iii) the SCSP's recommended tariff language prescribing when a customer must receive a bill for services rendered and when the Companies would have to notify customers of irregularities that cause billing delays;

(iv) the SCSP's recommendations concerning the Companies' need for additional resources to serve low- and moderate-income ("LMI") customers, including additional FTEs and funds for outreach and marketing;

(v) Public Utility Law Project of New York, Inc. ("PULP") witness William B. Yates' recommendations concerning Energy Affordability Program ("EAP") enrollments;

(vi) PULP Witness Yates' concerns about EAP discounts for non-heating customers;

(vii) the SCSP's and UIU Witness Collar's recommendations concerning the Companies' proposed use of out-of-state and near-offshore call center resources;

(viii) the recommendations of the Staff Revenue Requirement Panel ("SRRP") and New York City ("NYC") witness Michele Chait concerning the Companies' uncollectible rate and uncollectible expense reconciliation mechanism;

(ix) the recommendations of the SCSP, UIU Witness Collar, and PULP Witness Yates concerning the Companies' proposed Residential Termination and Uncollectible Expense Incentive;

(x) the recommendations of the SCSP concerning KEDNY's need for incremental Field Collection FTEs;

(xi) the recommendations by UIU Witness Collar, PULP Witness Yates, and NYC Witness John Sano concerning winter terminations;

(xii) the SCSP and NYC Witness Chait's recommendations concerning the Companies' proposal to socialize and reconcile credit card/debit card ("CC/DC") fees in rates;

(xiii) the Staff Efficiency Panel's ("SEP") recommendations concerning the Companies' proposals for incremental FTEs to assist in the marketing and delivery of their energy efficiency programs;

(xiv) the SEP's recommendations concerning the Companies' proposed energy efficiency pilots and programs;

(xv) WE ACT's recommendations concerning the Companies' reporting on activities in Disadvantaged Communities;

(xvi) the SEP's recommendation for the Companies' Clean Energy 2.0 and Green Button Connect systems;

(xvii) the SEP's recommendations concerning the Companies' proposals to add incremental Strategic Account Managers;

(xviii) NYC Witness Chait's recommendations concerning the Companies recovery of demand response costs;

(xix) NRG Witness Christopher Reyes's recommendations concerning the provision of information about the Companies' demand response programs to energy services companies ("ESCOs");

(xx) the NYC Policy Panel's ("NYCPP") recommendations regarding translation of the Company's communications;

(xxi) PULP Witness Yates' recommendations concerning the Companies'

Outreach to Elderly, Blind, and Disabled ("EBD") customers and procedures related to victims of domestic violence;

(xxii) PULP Witness Yates' recommendations concerning the Companies' administration of Deferred Payment Agreements ("DPAs") and the adoption of goals tied to the relationship between DPAs and the number of accounts in arrears; and

(xxiii) the SEP's recommendations concerning the Companies' proposed Earnings Adjustment Mechanisms ("EAMs").

Q. Does the Panel sponsor any exhibits as part of its rebuttal testimony?

A. Yes. The Panel sponsors the following exhibits that were proposed and/or compiled under its supervision and direction:

(i) Exhibit ___ (CP-1R) Relevant Responses to Information Requests ("IRs"); and

(ii) Exhibit ___ (CP-2R) consists of reports filed by New York State utilities concerning the financial impacts of implementing socialized CC/DC fees.

Q. Please provide an overall view of the testimony of Staff and intervenors concerning the issues addressed in the Panel's direct testimony.

A. The Panel's direct testimony provided support for a series of targeted proposals intended to both enhance the Companies' customer service and assist the Commission and the State in attaining their policy goals with respect to services provided to LMI customers and Disadvantaged Communities, energy efficiency, and demand response. The Companies'

proposals included recommendations for incremental resources and programs, modifications to the manner in which the Companies' call centers are staffed and customers pay their bills, and the management of uncollectible expenses in the wake of the COVID-19 pandemic.

While Staff and the intervenors have accepted a few of these proposals in whole or in part, these parties recommend rejection of many of them. Moreover, Staff and certain intervenors recommend a substantial increase in the Companies' exposure to Negative Revenue Adjustments ("NRAs") for a failure to meet threshold metrics under proposed revised Customer Service Performance Indicators ("CSPIs") even though the record establishes that the Companies have consistently met their customer performance targets dating back to 2015. As discussed more fully below, the recommended increase in NRA exposure is not justified by any evidence whatsoever that the Companies need a greater incentive to provide consistently high-quality customer service. Moreover, the recommended rejection of many of the customer proposals is unreasonable and at odds with the Commission's policy goals.

III. Customer Service Quality Program/Customer Service Performance Indicators

Q. The SCSP (at 48-77) provides a number of proposals concerning what the Panel refers to in direct testimony as the Customer Service Quality Program, please confirm the common terminology that you will use in addressing these issues.

A. Staff recommends that the Companies use the term "Customer Service Performance Indicators" ("CSPIs") to refer to what the Panel and UIU Witness Collar refer to as the Customer Service Quality Program. The Panel confirms that both terms refer to the same mechanism, and consistent with the SCSP's recommendation (at 49), the Panel will henceforth refer to CSPIs.

Q. What are the current negative revenue adjustments ("NRAs") that the Companies are at risk for should their performance with respect to the CSPI metrics fall below the established thresholds?

A. Under the current mechanism, KEDNY and KEDLI are at-risk for a total of $11.7 million and $9.9 million, respectively, in NRAs if they fail to meet the established performance thresholds.

Q. How do the SCSP and UIU Witness Collar propose to revise the NRAs that would apply under the CSPI?

A. The SCSP (at 71-76) and Mr. Collar (at 13) propose to use 15 basis points for each of the four CSPI metrics – a total of 60 basis points for the CSPI, which results in an increase in

annual NRA exposure to approximately $29.559 million for KEDNY and $18.971 million for KEDLI.

Q. Does the Panel support any of the recommendations to change the NRAs?

A. No, for several reasons. First, as the SCSP (at 54-55) acknowledges, the Companies have consistently exceeded all their CSPI performance thresholds since 2015. Moreover, the Companies' CSPI mechanism was examined and approved just over two years ago by the Commission in the 2019 KEDNY and KEDLI Rate Cases. While the SCSP asserts (at 48) that a CSPI is needed to "establish an incentive for each company to provide satisfactory levels of customer service performance," it offers no evidence that the current CSPI mechanism has not provided the Companies with an appropriate incentive. In fact, as part of its annual audit, the 2022 Customer Service Performance Report, Staff found, "[f]or the utilities that satisfactorily met their 2022 customer service performance metrics [including KEDNY and KEDLI], the Commission's performance measures serve as a strong incentive to maintain performance and encourage the utilities to put significant efforts into maintaining customer service." (Case 23-M-0040 at 24).

The SCSP and UIU Witness Collar are proposing to increase KEDNY and KEDLI's exposure to CSPI-related NRAs by 164 percent and 96 percent, respectively, without providing any evidence that a greater incentive is necessary to encourage the Companies to maintain adequate customer service. These recommendations are contrary to both common sense and applicable Commission precedent. Specifically, in Case 16-G-0257,

the Commission found that where National Fuel Gas Distribution Corporation's ("National Fuel") past customer service and gas safety performance was acceptable, the Commission would not impose a CSPI mechanism in a one-year rate case. In this case, unlike Case 16-G-0257, the Companies are not contending that no CSPI should be imposed. Rather, the Companies are contending that given the Companies past customer service performance, there is no reason for the Commission to arbitrarily modify an existing CSPI to impose substantially greater financial penalties as well as, in certain instances, more challenging customer service targets that will only increase the likelihood that the Companies will incur NRAs.

Q. Is the Panel opposed to the SCSP and UIU Witness Collar's proposals to convert the dollar values to basis points?

A. The Companies do not object to the conversion of dollar values to basis points for the purpose of determining NRAs. However, the amount of basis points at-risk should be equivalent to the dollar levels that are currently at-risk. Based on the Companies' filings in these proceedings, KEDNY's maximum NRA exposure of $11.7 million would be converted to a maximum NRA of 24 basis points, while KEDLI's maximum NRA exposure of $9.9 million would be converted to a maximum NRA exposure of 31 basis points.

Q. In addition to proposing to increase the Companies' NRA exposure under the CSPI, the SCSP also proposes (at 63, 69) to increase the thresholds at which the Companies would incur NRAs for the Customer Satisfaction Survey and, for KEDLI, the Adjusted Bills metric. Do you agree with these recommendations?

A. No, the SCSP's recommendation concerning the Customer Satisfaction Survey is based on consideration of five years' worth of data between 2018-2022. This period includes a substantial period (March 2020 through September 2021 for KEDLI and March 2020 through November 2021 for KEDNY) during which the Companies implemented COVID-19-related collection moratoria. During this period, the Companies attained unprecedented levels of customer satisfaction (93.2 percent in 2020 and 92.0 percent in 2021 for KEDNY; 92.2 percent in 2020 and 92.0 percent in KEDLI). The Companies do not expect that these levels are representative of the levels of customer satisfaction that can be attained in a period in which the Companies are enforcing collections. Thus, the Panel submits that customer satisfaction data for this period should not be used to set minimum customer satisfaction thresholds for the purpose of assessing NRAs. The Companies' existing Customer Satisfaction thresholds should remain in place.

With respect to the Adjusted Bills minimum threshold, the SCSP's recommendation that KEDLI's existing target should be reduced from 1.5 percent to 0.62 percent is based solely on the fact that KEDLI's actual performance has exceeded this threshold for the past five years. From the Companies' perspective, ratcheting up performance measures based solely

on past good performance is unreasonable and contrary to sound regulatory policy. The SCSP's recommendation effectively amounts to a proposal to punish the Companies for past good performance and would provide a disincentive for the Companies to achieve better levels of performance in the future. For these reasons, the SCSP's recommendation to impose a more stringent CSPI threshold for Adjusted Bills for KEDLI should be rejected.

Q. UIU Witness Collar recommends (at 8) that KEDLI's existing thresholds for PSC Complaints and Adjusted Bills should be modified. Do you agree with those recommendations?

A. No. UIU Witness Collar's recommendations are even more punitive than the SCSP's proposals. Specifically, Mr. Collar would propose thresholds of 0.6 complaints per 100,000 customer and 0.20 percent for Adjusted Bills. The existing thresholds for customer complaints of 1.0 per 100,000 customers is already the most stringent in New York. UIU Witness Collar's proposed thresholds would be far and away the lowest thresholds in New York State for PSC Complaints and Adjusted Bills and would do nothing more than punish KEDLI for having provided a high level of customer service during a period that included the COVID-19 pandemic. In the absence of any evidence that KEDLI's customer service has declined or is likely to decline in the future, there is no reasonable justification for adopting the thresholds recommended by Mr. Collar.

Q. The SCSP recommends (at 57-58) that the Companies CSPIs should be modified to establish performance tiers for each metric. Do you agree with this recommendation?

A. As we have stated previously, it is generally our understanding that the Commission will not require significant changes to a CSPI in a one-year rate case where there is no evidence that a utility's customer service is likely to decline. However, in the context of multi-year settlement discussions, the Companies are willing to explore a tiered approach provided that existing thresholds for the CSPI metric and the total value of the potential NRAs remain unchanged.

Q. Did the SCSP propose any additional recommendations regarding the Companies' CSPI reporting?

A. Yes, the SCSP (at 70-71) recommended the Companies provide disaggregated billing data from 2019 through 2022 for purposes of assessing the Companies' estimated billing processes and procedures.

Q. Do the Companies track the disaggregated data in the form requested by the SCSP?

A. No. The Companies, as noted by the SCSP (at 70), file monthly CSPI reports with the Commission. The monthly reports include an estimated bill calculation by month for each company and a year-to-date estimated bill average. As set forth in the "Customer Service Quality and Performance Indicator Reports – Procedure Document" provided to Staff as Attachment 1 to IR No. DPS-420, included in Exhibit ___ (CP-1R), the Companies calculate the estimated bill information using missed meter read data from the Field

Collection System ("FCS"). The FCS does not disaggregate data in the form requested. Nevertheless, the Companies are willing to work with Staff to identify data sets available from the CRIS and CSS systems for KEDNY and KEDLI, respectively, that would help with Staff's review of the Companies' billing processes and procedures.

Q. The SCSP (at 71) indicates its data request is tied to statewide concerns with the frequency and accuracy of estimated bills, particularly estimated bills for multiple consecutive months. Do the Companies share Staff's concern?

A. The Companies share a commitment to ensuring customers receive accurate bills. Limiting the number of estimated bills is an important part of that effort. To that end, the Companies successfully completed Automated Meter Reading ("AMR") initiatives, which have reduced the number of estimated bills customers receive. Specifically, KEDNY has seen a significant reduction in estimated reads from highs approaching 320,000 estimates per month as recently as 2016.

Q. Despite these efforts, why is KEDNY's estimated bill rate higher than KEDLI's?

A. As noted by the SCSP (at 70), KEDLI's estimated meter read rate from 2019 to 2022 was well below one percent, whereas KEDNY's rate over that same period rose to 6.49 percent. The Companies believe there are several reasons contributing to the difference – most notably the predominance of accessible outdoor meters in KEDLI's service territory and the newer age of the majority of KEDLI AMR Encoder Receiver Transmitters ("ERTs"). As explained in the direct testimony of the Companies' Gas Safety Panel (at 19-21),

KEDLI's meter relocation program has successfully moved approximately 14,444 meters outside. For KEDNY, however, space constraints and New York City Department of Buildings code interpretations have significantly impaired meter relocation efforts. Likewise, a majority of the KEDNY ERTs, many of which are located indoors, are now well beyond their 20-year useful life and beginning to fail at higher rates.

Q. Was the impact of these operational differences exacerbated by the COVID-19 pandemic?

A. Yes. For KEDNY, COVID-related restrictions and policies resulted in an increase in the backlog of failed units due to the high percentage of aging indoor meters/ERTs. Following Governor Cuomo's emergency declaration on March 7, 2020 (16 NYCRR §8.202), the Companies stopped having crews enter homes and business for non-essential services, which included manually accessing meters/ERTs that were not transmitting AMR meter reads. To protect the general health, safety, and welfare of customers, the Commission also authorized the Companies to postpone rate increases and waive certain fees for collections-related activities and non-essential services, including meter-access charges. (Order issued March 25, 2023 in Case 17-E-0238, *et al.*). The Company effectuated the meter-access fee waiver by disabling functionality on the AMR meters used to automatically initiate estimated meter-read letters for customers and impose meter-access fees.

Also, KEDNY would have installed or replaced ERTs as part of its normal operations, such as responding to customer requests for non-essential services, meter replacements, or inspections; with those activities on hold due to the pandemic-related work restrictions, the backlog of non-communicating ERTs grew to a level that cannot be addressed with existing resources.

Q. If current resources are insufficient to address the backlog of ERT failures, how does KEDNY propose to address the situation and reduce the estimated meter reads?

A. As set forth in the direct and rebuttal testimony of the Gas Infrastructure Operations Panel ("GIOP"), KEDNY proposed two initiatives to address the increase in ERT failures and reduce the backlog: an AMR ERT Replacement Purchase Program and a Proactive ERT Replacement Program. (KEDNY GIOP direct testimony at 59, Exhibit___(GIOP-5) at 17-19 and 180-182, and GIOP rebuttal testimony at 55). Taken together, KEDNY expects these programs will enable the company to address a significant portion of the non-communicating ERTs that accumulated during and after the COVID-related pause on non-essential activity. KEDNY (GIOP at 59, 100) has further proposed to support this effort with 14 incremental FTEs in the Rate Year, increasing to 23 incremental FTEs by Data Year 3.

Q. Do the Companies propose any additional outreach to further reduce the average number of bills based on estimated meter reads?

A. Yes. Customers can currently access the Companies' website for information on how to submit a meter read, including logging into their accounts to provide the information, calling the Companies' customer service number, or scheduling an appointment. In addition, the Companies are developing a proactive outreach campaign to inform customers of these options, which will likely include an opportunity for customers to email a picture of their meter to the company – a capability KEDLI successfully used approximately 10 years ago when converting its customer service system and which is currently being used by the Companies' Massachusetts affiliate.

Q. Does the SCSP make any recommendations regarding the Companies' tariffs?

A. Yes. The SCSP (at 100) recommends adding tariff language that expressly addresses when customers must receive a bill for services rendered by the Companies and establishing procedures to inform customers of irregularities that cause a billing delay.

Q. What is the Companies response to the SCSP's proposed tariff language?

A. The Companies are unaware of specific concerns regarding the regularity of the monthly bills they issue. Nevertheless, they are open to working with Staff to understand the concerns and how to best resolve them. Specific to the tariff language proposed, the Companies would like to better understand the dates and requirements it would impose relative to the Companies billing cycles and current procedures. In addition, the tariff

proposal includes process changes that would require time to develop, as well as costs and resources to implement (*e.g.*, IT support for coding). Those costs and resources are not contemplated in the Companies' current rate filing.

IV. Additional Resources for LMI Customers and Disadvantaged Communities

Q. Did Staff or any other party offer testimony opposing the Companies' proposals for additional resources to serve Disadvantaged Communities and LMI customers?

A. Yes. The SCSP submitted testimony that partially opposed the Companies' proposals for additional resources to serve Disadvantaged Communities and LMI customers.

A. FTEs

Q. Did the Companies' initial filings in these cases identify the resources needed to better serve the needs of LMI customers and Disadvantaged Communities?

A. Yes. The Panel's direct testimony identified the additional programs and incremental FTEs that the Companies believe are needed to better serve the needs of Disadvantaged Communities and the Companies' LMI customers. Specifically, with respect to incremental FTEs, the Panel identified a need for: (1) three EAP Administrators to increase EAP enrollment; (2) three LMI analysts, consisting of two customer Residential Segment Energy Equity Analysts and one Data Analyst to develop a comprehensive strategy for serving LMI customers; (3) five new Consumer Advocates to enhance support provided to LMI customers and Disadvantaged Communities; (4) three Clean Energy Advisors responsible for helping LMI customers navigate the various clean energy programs; and

(5) one Marketing and Outreach Specialist to design, develop, and implement the LMI marketing and outreach strategy and plan.

Q. Did the SCSP agree with the Companies' FTE requests for additional resources for LMIs and Disadvantaged Communities?

A. Only partially. The SCSP recommends that the Commission approve three EAP Administrator FTEs, one Energy Equity Analyst FTE, one Data Analyst FTE, and two Consumer Advocate FTEs for KEDNY. The SCSP further recommended that the Commission reject one Energy Equity Analyst FTE, one Consumer Advocate FTE for KEDNY, two Consumer Advocate FTEs for KEDLI, and one Marketing and Outreach Specialist FTE.

Q. Do the Companies agree with SCSP's recommendations?

A. No. The Companies disagree with the SCSP's recommendations.

Q. Why do the Companies disagree with Staff's recommendations to reject one of the proposed Energy Equity Analysts?

A. The role of the Energy Equity Analyst is to assist the Companies in meeting its Commission-approved savings targets for LMI energy efficiency programs, achieving the targeted percentage of energy efficiency program benefits in Disadvantaged Communities, and increasing EAP enrollment. The SCSP's rejection of one Energy Equity Analyst FTE appears to be based on its belief that, because Staff also recommends rejection of the

Companies' proposed LMI marketing program, the additional Equity Analyst is unnecessary. The Companies do not agree, as explained below, that the LMI Marketing Program should be rejected. More important, however, currently only one FTE spends one-half of their time on marketing LMI programs for both Companies.

Given the acknowledged need to expand awareness of programs and offerings to LMI customers, having just one-half FTE dedicated specifically to LMI marketing and outreach planning, strategy, collateral development and execution for both KEDNY and KEDLI is insufficient. Moreover, because, as explained below, the LMI Outreach and Education Program is fully warranted and should be approved, the proposed Marketing and Outreach Specialist FTE split between KEDNY and KEDLI to design, develop, and implement the marketing and outreach strategy and plan should also be approved. Further support for the addition of two Energy Equity Analysts is set forth in the Companies' response to IR No. UIU-28, included as part of Exhibit ___ (CP-1R).

Q. Please explain why the Companies believe that they require five additional Consumer Advocates instead of three as recommended by the SCSP.

A. While the Panel appreciates that the SCSP recognizes the need for some incremental Consumer Advocate resources, as described more fully below, the SCSP appears to conflate the very different roles of the Energy Equity and Data analysts and the Consumer Advocates. Those roles are not interchangeable. In addition, the SCSP's claim (at 42) that NYSERDA and community groups can be enlisted to take some of the burden off the

Consumer Advocates fails to recognize that the Consumer Advocates are deeply embedded in the community and charged with finding opportunities to identify low-income customers and connect with them on a personal level. While the role of NYSERDA and various community groups is beneficial to the LMI community, it is not a substitute for the type of individual attention that the Companies' Consumer Advocates can provide. LMI customers have individual needs that require a multi-faceted approach and a wide array of assistance programs. As noted in the Panel's direct testimony (at 29), there are 690,000 potential LMI customers who could benefit from these programs. The addition of three Consumer Advocates at KEDNY would not only enable outreach to an addition 7,200 to 9,000 households but would also support approximately 108 community outreach events in KEDNY's service territory. Similarly, the addition of two full time Consumer Advocate in KEDLI's service territory would not only enable outreach and assistance to an additional 4,800 to 6,000 households but would support approximately 72 community outreach events annually. The additional Consumer Advocates would not only also assist in identifying new low-income customers but would also increase participation in EAP and other low-income programs.

Q. Why do the Companies disagree with the SCSP's recommendation (at 43-44) to reject three Clean Energy Advisor FTEs?

A. As previously explained in the Panel's direct testimony, the Clean Energy Advisors help customers navigate the various clean energy programs. The Clean Energy Advisors would assist customers with completing clean energy program applications, scheduling

appointments or services, and bringing together different utility, local, State and federal programs and/or funding sources to help meet as much of the customers' needs as possible. These employees would help overcome barriers LMI customers face in understanding what clean energy programs are available and the process to participate in the programs. The SCSP believes that the Companies' Consumer Advocates can fulfill these roles by acting as liaisons to NYSERDA's Regional Clean Energy Hubs. The Companies disagree with this assumption and submit that LMI customers would derive substantial benefits from the individual attention that the proposed Clean Energy Advisors would provide.

Q. Are Consumer Advocates appropriate substitutes for the Clean Energy Advisors?

A. No. As the Panel explained in our direct testimony (at 32), "the Clean Energy Advisor roles are specifically trained and focused on assisting and advising customers on LMI energy efficiency programs and responsible for providing a concierge-like service to guide them through the end-to-end process." The role of the Consumer Advocates is to ensure that the Companies' most vulnerable customers are provided with the programs and assistance to which they are entitled. However, they are not trained to provide technical assistance on energy efficiency matters and do not provide such assistance.

Q. Do the Companies agree with the SCSP that Consumer Advocates can substitute for the role of Clean Energy Advisor by acting as referral agents to NYSERDA's Regional Energy Hub?

A. No. The Companies do not believe that LMI-related energy efficiency efforts are likely to be successful if the Companies' role is limited to referring LMI customers to NYSERDA's Regional Clean Energy Hubs. In its "Order Directing Energy Efficiency and Building Electrification Proposals," issued July 20, 2023, in Cases 14-M-0084, and 18-M-0094, the Commission noted it "is particularly sensitive to the need to take decisive action to improve energy affordability and increase access to clean energy solutions for our most vulnerable customers through the clean energy transition." The Clean Energy Advisors are intended to do just that by providing customers with hands-on, personal expertise to help manage their energy needs in the most efficient manner. While NYSERDA's Regional Clean Energy Hubs are an excellent resource for most customers, LMI customers often need extra assistance to help them navigate the complexities of the energy efficiency marketplace. For these reasons, the three Clean Energy Advisors FTEs should be approved.

B. Outreach and Marketing Program

1. LMI Marketing and Outreach

Q. The SCSP (at 35) recommends rejection of the Companies' proposed LMI outreach program. Do you have any response to the SCSP's position?

A. While the Companies acknowledge that information about LMI programs is included in broader campaigns, such as seasonal customer communications, the Companies believe

that more could be done to assist this critical customer segment. As noted, there are likely over 300,000 customers who are eligible for HEAP but are either unaware of the program or do now know how to enroll. EAP is another program that would benefit from additional outreach and education. The Companies believe that the relatively modest LMI outreach program they are proposing will significantly enhance the quality and ultimate success of the overall LMI outreach effort.

C. Other Outreach and Education Issues

Q. Does the SCSP make any other recommendations related to Outreach and Education?

A. Yes. The SCSP (at 31) recommends the Companies continue to file their annual outreach and education plans and reports with the Secretary to the Commission under Case 17-M-0475 by April 1 of each calendar year. The SCSP also recommends the Commission direct the Companies to use the modified budget template provided in Exhibit__ (SCSP-04) and to include separate budgets for each Company, by program, with dollar amounts for each outreach activity line item including labor and where the Companies identify that a portion of their budgets are reflected in other sections of the O&E Plan budgets, they should be directed to disclose the page number on the document, name of the program budget, and the amount allocated for Energy Service Affordability outreach.

Q. Do the Companies agree with these recommendations?

A. Partially. The Companies agree with continuing to file their annual outreach and education plans with the Secretary to the Commission under Case 17-M-0475 by April 1 of each calendar year. The Companies submit that the SCSP's remaining proposals are not appropriately considered in a one-year rate proceeding. The Companies are willing to discuss the proposals as part of a multi-year settlement.

Q. The NYCPP (at 15-16) recommends that the Companies should provide outreach materials in the ten most commonly spoken languages in its service territory. Do you have any comments on this recommendation?

A. Consistent with applicable law, the Companies currently provide notices in languages – English and Spanish – that are spoken by at least 20 percent of the population of any county served by the Companies. To expand notices to ten different languages would be unduly burdensome and require incremental funding that is not included in the revenue requirements. The Companies have already undertaken steps to improve language access, including adding Google translation functionality to National Grid-hosted webpages, providing interpretation services in over 30 languages for callers to the customer call center, and conducting a research-informed multilingual outreach campaign to inform customers of opportunities for energy efficiency.

D. PULP LMI Proposals

1. Service Quality Metric for LMI

Q. Does PULP offer any additional proposals related to LMI?

A. Yes. PULP Witness Yates (at 35) proposes a customer service quality metric ("CSQM") be adopted that, on a monthly basis, tracks EAP self-certifications, manual enrollments by the Companies, automatic enrollment due to the receipt of HEAP, and referrals to customer electric utility EAP self-certification portals. PULP Witness Yates proposes the base year for the metric be the twelve months ending March 31, 2024 and that the Companies would file quarterly reports in these proceedings and Case 14-M-0565 tracking the monthly activity for each of the categories, along with their trailing 12-month averages.

Q. Do the Companies agree with this proposal?

A. No. As mentioned by the SCSP (at 17), "per the Commission's Energy Affordability Policy Orders, proposed modification to utilities' EAPs must be discussed within the Energy Affordability Policy Working Group and filed with the Commission for approval under the generic proceedings (Case 14-M-0565 and 20-M-0266) so that the EAPs are consistent among the utilities in the State." Currently, utility reporting for EAP is done monthly with a summary report filed annually in February. The annual report includes EAP self-certifications as well as HEAP grants received by the Companies. The suggested reporting would be duplicative, unnecessarily burdensome, and inconsistent with the other utilities in New York.

V. Customer Experience Programs

Q. The SCSP (at 78-80) recommends that the Commission should reject the Companies' proposals to use vendor call center employees outside of New York and near offshore. Do you agree with these recommendations?

A. No. The Companies' third-party vendors provide flexible work schedules with work-from-home options to attract and retain quality employees. Even with this flexibility, attrition rates remain high for stateside employees. The Companies continue to compete with other types of employment, which was not the Companies' experience previously and which has resulted in increased difficulty in attracting and retaining New York-based employees. Enabling third-party vendors to use resources outside New York State will allow them to attract candidates from a wider range of employment markets, affording them the opportunity to achieve greater efficiencies and reduce attrition. Under the Companies' proposal, employees of the third-party could be located outside of New York but within the continental United States for all English calls and near offshore for Spanish calls. The experience of National Grid's Massachusetts affiliate is that the current attrition rate for Guatemala resources supporting Spanish-speaking call volume is at less than one percent monthly.

Q. What is the main driver for proposing utilization of vendor call center employees outside of New York and near offshore?

A. The Companies' proposal is not a cost cutting exercise. It is about improving the overall customer and agent experience to continue to improve customer and employee satisfaction, first call resolution, and attrition rates.

Q. The SCSP (at 80) is concerned that the Companies' proposals will result in the loss of potential jobs for New York residents. Will the Companies continue to recruit call center employees who live in New York if their proposals are approved by the Commission?

A. Yes. As the Panel stated in its direct testimony (at 49), if the Companies' proposals are granted, the Companies will continue to attempt to hire and retain call center employees who live in New York. The Companies' proposal is intended to provide them the flexibility to use other resources if they continue to have difficulty attracting and retaining call center staff. The Companies' focus is on ensuring their ability to continue to provide high-quality customer service in the face of changing employment environments in New York.

Q. Do you agree with UIU Witness Collar's recommendation (at 18-19) that the Companies should seek approval for the use of a near offshore Spanish speaking call center in a separate forum?

A. No. NYSEG and RGE proposed to relocate call centers as part of their base rate filing and not in a separate proceeding, as Mr. Collar suggests. UIU Witness Collar offers no reason why the impacts of the Companies' proposals cannot be considered in this case.

VI. Uncollectibles

Q. What are the recommendations by the SRRP (at 54-57) and NYC Witness Chait (at 42-43) regarding the uncollectible rate?

A. Staff agrees with the Companies' use of a three-year average of write-off percentages to determine the uncollectible expense for both KEDLI and KEDNY utilizing the years 2017-2019. However, the SRRP recommends an adjustment to the calculation for KEDNY to reflect a decline in write-off percentages over the 2017-2019 three-year period for KEDNY. This adjustment would reduce KEDNY's uncollectible expenses by $1.998 million. NYC Witness Chait opposes using a three-year average and proposes using only the 2019 write off rate to determine the uncollectible expense.

Q. Do the Companies agree with NYC Witness Chait's recommendations?

A. The Companies disagree with Ms. Chait's recommendation to rely solely on the 2019 write-off percentages. The use of a three-year average to calculate the net write-off rate is consistent with the methodology used in the 2019 KEDNY and KEDLI Rate Cases and the

2017 and 2020 NMPC Rate Cases. Moreover, the use of the three-year average reduces the chance of an anomaly that could have taken place during one particular year. A three-year average is a fair method of predicting future rates under the circumstances of these cases.

Q. Do the Companies agree with SRRP's recommendation to use the three-year average of the net decline in write-off rates during the 2017-2019 period to establish KEDNY's write-off rate?

A. No. Adjusting the three-year average calculation for KEDNY would not be appropriate because there are a number of factors that impact the net write-off rate, including changes in commodity costs. This is illustrated by the fact that while KEDNY's write-off rate went down over the 2017-2019 period, KEDNY's uncollectible expense actually increased from $14.6 million in 2017 to $16.3 million in 2018. In seeking to impute an adjustment to KEDNY's write-off rate, the SRRP is doing nothing more than imposing an arbitrary disallowance of uncollectible expense on KEDNY. The methodology for determining uncollectible expense should be consistent for both KEDNY and KEDLI, reflecting a three-year average of write-off percentages without adjustment.

Q. Do KEDNY's current circumstances with respect to customer arrearages support the reduction in KEDNY's write-off percentages recommended by the SCSP?

A. No. As of July 2023, KEDNY has approximately 215,000 accounts that are in arrears for more than 60 days. Over the period 2017-2019, the average number of KEDNY accounts

that were in arrears was approximately 175,000. Given the increase in the number of accounts in arrears, KEDNY is unlikely to experience a reduction in its net write off percentage in the Rate Year.

Q. The SRRP asserts that it is reasonable to assume that KEDNY's efforts toward reducing uncollectible expenses support the imputation of a further reduction in KEDNY's write-off rate. Do you agree?

A. No. The SRRP (at 56) points to the fact that the SCSP is recommending an incremental 20 collection FTEs in support of its position. This claim ignores the fact that the Companies sought 30 incremental FTEs to restore their resources to pre-pandemic levels. As discussed more fully below, based on the fact that the number of KEDNY accounts has grown to approximately 215,000, KEDNY would now actually need 37 Field Collection FTEs to effectively manage its arrearages. While the Companies oppose Staff's proposed reduction of collection FTEs as discussed more fully below, to the extent it is adopted, it does not support the SRRP's further imputation of a lower net write-off rate for KEDNY. Instead, it actually provides an additional reason to reject the SCSP's recommended reduction to KEDNY's net write-off percentages.

Q. Both the SRRP (at 79-81) and NYC Witness Chait (at 5) oppose the Companies' proposal to establish an uncollectible expense reconciliation mechanism. Do you have any comments concerning those recommendations?

A. Yes. The opponents of the Companies' reconciliation proposal have lost sight of the fact that the Companies proposed reconciliation mechanism would benefit both customers and the Companies by ensuring that customers will pay no more and no less than the Companies' actual expense. The opponents of the recommendation also ignore the fact that all parties to this case are using data from periods six to eight years before the Rate Year to establish the applicable write-off percentages. Thus, there is considerable uncertainty surrounding the establishment of the uncollectible expense in these cases. Moreover, as we discussed previously, KEDNY's current 60-day arrearages far exceed the average number of accounts in arrearage in the 2017-2019 period, creating a likelihood that write-offs will increase in the Rate Year. Given this uncertainty, it is the Panel's position that the circumstances of this case are much like the situation in Consolidated Edison Company of New York, Inc.'s ("Con Edison") 2008 rate proceeding (Case 08-E-0539) in which the Commission allowed a full reconciliation of uncollectible expense in a one-year rate case.

Q. What were the recommendations of the SCSP, PULP Witness Yates, and UIU Witness Collar, regarding the Residential Termination and Uncollectible Expense Incentive?

A. The SCSP (at 82-82) recommends that the mechanism continue to be suspended until the Companies file new rates. PULP Witness Yates (at 70-71) opposes the Termination and

Uncollectible Incentive. UIU Witness Collar (at 21) recommends that a collaborative take place before the mechanism is restored.

Q. Does the Company agree with these recommendations?

A. The Companies agree with suspending the uncollectible expense incentive during the Rate Year but believe that the mechanism should be restored as part of a multi-year rate plan for the reasons described in the Panel's direct testimony (at 74-75).

VII. Field Collection Employees

Q. The SCSP (at 86-89) recommends that the Commission provide funding for only 20 of the 30 incremental FTEs requested by KEDNY to restore its Field Collections workforce. Does KEDNY agree with the SCSP's position?

A. No. In formulating its recommendation, the SCSP relied on an inaccurate extrapolation of data from KEDNY's Collection Reports from January 2023 through July 2023, which showed that KEDNY had performed only 8,976 terminations during that period. However, these terminations are lower than what would be expected under normal circumstances because KEDNY did not have the Field Collections FTEs in place. As we discussed previously, the number of KEDNY accounts in arrears over 60 days has increased by over 40,000 customers or 25 percent from the three-year average of 2017-2019 to July 2023. As of July 2023, KEDNY has approximately 215,000 accounts in arrears which are projected to result in the need for approximately 234,000 field visits and 38,000 terminations. Based on a three-year average for the period 2017-2019 of field visits per

FTE for terminations, each Field Collection FTE completes approximately 6,300 field visits per year. Thus, the required incremental FTEs needed to address the current number of accounts in arrears is approximately 37. Therefore, at a minimum, the Company requires the 30 incremental FTEs originally requested.

Q. Does the number of Field Collection FTEs affect the accompanying total write-offs?

A. Yes. Based on an analysis, each Field Collection FTE collects approximately $2.9 million annually, which equates to an avoided write-off impact of $1.5 million.

Q. Does the fact that the SCSP supports the hiring of three additional Collection Residential Account Managers affect your calculations?

A. No. The Collection Residential Account Managers ("CRAM") will work with customers to prevent service terminations. However, their impact will be measured in the hundreds. The Field Collection team will still need to work at pre-COVID levels or greater to address the current number of customers in arrears.

VIII. Service Terminations

Q. What were the recommendations by UIU Witness Collar, NYC Witness Sano, and PULP Witness Yates regarding service terminations during cold weather?

A. Mr. Collar (at 29) and Mr. Sano (at 27) advocate for a disconnection ban whenever wind chill temperatures are below 32 degrees Fahrenheit. PULP witness Yates (at 72-73) suggests that the Companies commit to their current voluntary cold weather protections.

Q. Do the Companies agree with these recommendations?

A. Annually, the Companies have agreed to additional voluntary protections requested by the Department of Public Service, local service agencies, and other groups regarding terminations for non-payment during the winter, including:

- For the period from November 1 through April 15, the Companies will accept all HEAP payments and provide the customer with continued or restored service regardless of the amount due and/or the customer's payment status.
- During the Cold Weather Period, the Companies will consider any Regular and/or Emergency HEAP payment as entitling the applicant to a fair and reasonable DPA, regardless of any previous DPA defaults.
- The Companies will refrain from scheduling residential service terminations on days when the local weather forecast predicts below-freezing temperatures.
- The Companies will establish a voluntary moratorium on winter terminations for customers with an EBD designation.

The Companies believe there is no need for additional restrictions associated with the wind chill adjusted temperature. The Companies will continue to voluntarily agree to annual cold weather protections, including refraining from scheduling residential service terminations on days when the local weather forecast predicts below-freezing temperatures, which is at 32 degrees Fahrenheit without wind chill.

IX. Residential Credit Card/Debit Card Fees

Q. The SCSP (at 91) opposes the Companies' proposal to socialize and reconcile credit card/debit card ("CC/DC") fees in rates. Do you agree with this recommendation?

A. The Companies disagree with the SCSP recommendation that the Commission reject the use of the no-fee model to socialize residential CC/DC fees in rates. While the SCSP cites a concern that transaction fees are likely to increase, this is not consistent with the Companies' experience. The Companies have utilized Speedpay as their third-party card processor since 2009. Initially, the fee for residential customers was $2.25 per transaction until 2019 when it was reduced to $1.99 per transaction. In 2022, it was further reduced to $1.75, which illustrates the Companies' commitment and ability to lower fees for our customers. The Companies have been able to negotiate lower fees for customers by utilizing a request-for-proposals process to obtain lower fees from Speedpay. The Companies are also aware that, to the extent the Companies can increase the amount of CC/DC payments, there is an opportunity to work with Speedpay to apply for the Visa Utility Rate, which will further reduce the card processing fee. In proposing to socialize CC/DC fees, the Companies are attempting to satisfy customers that overwhelmingly agree that they would use credit/debit cards to pay their bills if there was no fee. In this regard, the Companies conducted a survey in July 2023 that asked, "Which, if any, of the following would keep you from using a Debit or Credit Card to pay your monthly National Grid bill?" 311 customers responded to the survey with 70 percent saying the fee prevents them from using this electronic payment method. Based on this response, the Companies submit that

a significant number of customers see the implementation of the no fee CC/DC model as an element of higher quality customer service.

The Companies also see a benefit to the no-fee model for low-income customers that want to use a debit or credit card to pay their bill. In recent months, approximately 13 percent of credit/debit card payments were made by low-income customers. The socialization of these costs will aid low-income customers by reducing the cost to individual customers that use this method to pay their utility bills.

Q. The SCSP asserts (at 91) that New York utilities that have adopted the no-fee model have seen an increase in both aggregate fees and per transaction fee rates. Do you agree with this claim?

A. The Panel agrees that aggregate CC/DC fees have increased for New York utilities after adoption of the no-fee model but disputes the claim that per-transaction fees have increased. Attached as Exhibit ___ (CP-2R) are the quarterly CC/DC payment reports filed by Central Hudson in Case 20-E-0428, Orange & Rockland in Case 18-E-0067, and NYSEG and RGE in Case 19-E-0378. These reports show that:

1. Central Hudson's per-transaction rate stayed consistent at $1.85 between October 2021 through June 2023;
2. Orange and Rockland's per-transaction fee dropped from $2.20 in the first quarter of 2019 to $2.10 in the fourth quarter of 2021; and

3. NYSEG and RGE's per-transaction costs have dropped from $2.03 and $2.72, respectively, in the second quarter of 2021 to $1.31 and $1.56, respectively, in the second quarter of 2023.

The Companies disagree with the SCSP that the fact that aggregate charges for CC/DC fees increases for utilities provides a basis to reject the no fee model. From the Companies' perspective, this increase in costs demonstrates that eliminating per transaction fees is seen by customers as improving customer service. More importantly, however, as discussed above, the Companies believe that if they can implement the no-fee model for CC/DC fees, they will be able to achieve further reductions in the per-transaction fees that would benefit all customers.

Q. Both SCSP and NYC Witness Chait oppose the Companies' proposal to reconcile the total costs socializing CC/DC fees. Do you agree?

A. No. Given the uncertainty associated with the transaction fees and customer adoption, the Companies believe that a full symmetrical reconciliation of these costs is reasonable. A number of other New York utilities currently reconcile CC/DC fees and adoption of the Companies' proposal would put them on the same footing as other utilities.

X. Energy Efficiency

Q. Please provide an overview of the SEP's recommendations for the Company's energy efficiency labor.

A. The SEP recommends that the Companies' revenue requirements reflect six FTEs instead of 14 FTEs requested by the Companies. The Panel also recommends removing in their entirety the one FTE associated with the Clean Energy 2.0 system and 0.5 FTE associated with the Green Button Connect system.

Q. Do the Companies agree with these recommendations?

A. No. Although the Companies have been able to achieve their energy efficiency targets in recent years, those targets more than double by 2025. Data presented in the Panels' direct testimony illustrates year-over-year growth in energy efficiency-related administrative work, quality assurance, controls, and compliance, as well as program management and delivery. Further, the Clean Energy 2.0 support FTE is for both the existing InDemand system as well as the future Clean Energy 2.0 system. Previous data presented shows the year-over-year increase in work requests required to keep the existing system running, along with updates needed for existing and new program/product delivery. Also, the Companies believe the Green Button Connect FTE will be required to implement and maintain that system.

Q. Please describe the SEP's recommendations for the Companies' energy efficiency cost recovery should the Commission not authorize budgets until after conclusion of these proceedings.

A. The SEP anticipates that the Commission would address cost recovery to the extent necessary in the NE:NY Interim Review and thus, the matter should be addressed at that proceeding.

Q. Do the Companies agree with this recommendation?

A. The Companies should recover energy efficiency costs in a timely manner. If a recovery mechanism is not adopted in the NE:NY Interim Review, then a separate surcharge mechanism should be authorized as part of this proceeding to ensure the Companies timely recovers incremental energy efficiency costs.

Q. The NYCPP (at 32-33) asserts that the Companies should be required to incorporate "mitigation measures" in their energy efficiency planning going forward. Does the Panel agree?

A. Yes. That is why the Companies proposed energy efficiency related programs, such as the Weatherization Health and Safety Program and the Language Access Program. The Panel hopes that NYC supports these efforts.

Q. Please summarize the SEP's recommendations regarding the KEDLI HEAT program.

A. The SEP (at 25-26) supports continuing the KEDLI HEAT program at the annual funding level of $2.5 million through the end of calendar year 2025, when, in accordance with the Commission's July 20, 2023 "Order Directing Energy Efficiency and Building Electrification Proposals" in Case 18-M-0084, the Company will conclude the program and responsibility for implementing LMI programs for the one to four family home segment statewide will transition to NYSERDA.

Q. Does the SEP make any recommendations regarding the transition from the KEDLI HEAT Program to NYSERDA's Statewide LMI Program?

A. Yes. The SEP recommends (at 26-27) that KEDLI work with NYSERDA to ensure a smooth handoff of program delivery responsibilities and commit to completing all HEAT projects in the queue by the end of 2025. The SEP also recommends the Commission require KEDLI, in collaboration with NYSERDA and DPS Staff, to develop and file no later than January 1, 2025, a detailed transition plan addressing customer outreach, planned periodic reporting, processes to limit or avoid gaps in program offerings, and a specific process and timeframe for completing the KEDLI HEAT projects beyond 2025.

Q. What is KEDLI's position on this recommendation?

A. KEDLI is committed to working with NYSERDA and Staff to develop a clear transition plan for the KEDLI HEAT program to ensure a smooth transition so that no customers are adversely impacted. KEDLI believes this should occur through the NE:NY proceeding.

Q. Did the SEP make any other recommendations regarding the KEDLI HEAT program?

A. Yes. The SEP recommends (at 27-28) establishing a program target for the KEDLI HEAT Program that is in line with the Commission authorized LMI dollar per MMBtu run rate of $108.02 per MMBtu applied to the $2.5 million funding amount resulting in an annual KEDLI HEAT Program target of 23,144 MMBtu.

Q. Does KEDLI agree with this recommendation?

A. KEDLI disagrees that an additional target is warranted, and it disagrees with applying the proposed run rate to the incremental $2.5 million. Based upon experience to date implementing the LMI programs, and particularly the KEDLI HEAT Program, the run rates envisioned in the January 2020 "Order Adopting Energy Efficiency Budgets and Targets" in Case 18-M-0084 ("January 2020 Order") through 2025 have not proven to be sufficient to provide LMI customers in KEDLI's service territory with energy efficiency measures that are suitable and necessary. As filed in Case 18-M-0084, the Statewide LMI Portfolio Annual Reports detail the performance of the KEDLI HEAT program as well as the EmPower+ program, where it can be seen that the run rates for the two programs are

comparable, but far exceed the $108.02/MMBtu run rate established by the Commission in the January 2020 Order. Therefore, the SEP's proposed run rate is not feasible. Additionally, KEDLI does not agree with taking on additional energy savings target for the LMI portfolio because it is projected that the Company will not be able to achieve the existing ordered target, as evidenced in the Statewide LMI Portfolio Implementation Plan. Due to the minimal uptake of the KEDLI Affordable Multifamily Energy Efficiency Program ("AMEEP"), the KEDLI LMI portfolio energy savings are primarily achieved through the KEDLI HEAT program which has a run rate higher than the suggested $108.02/MMBtu and is not balanced out by AMEEP which typically has a lower run rate.

Q. The SEP recommends (at 30-34) that the Companies' Energy Efficiency Pilots and Programs, including the Digital Building Replica, Language Access Pilot, and Disadvantaged Community Outreach should be funded through the standard NE:NY budgets. Do the Companies agree with this recommendation?

A. No. Due to the high weatherization costs and pull-forward of original 2024-2025 NE:NY funds, the Companies do not anticipate having the opportunity to utilize remaining NE:NY funding for these critical activities in 2024-2025 at the levels needed without compromising essential incentive programs. Further, because the pilots and programs proposed in these cases target very specific demographics, they do not fit neatly within one program budget. The NE:NY marketing budget would not provide the degree of granularity that this pilot looks to provide. The Companies do intend to propose budgets

for some of these activities in future years' plans as part of the Companies' NE:NY Interim Review proposal for 2026-30.

Q. The SEP recommends (at 34-38) discontinuing the Weatherization Health and Safety Program. Do the Companies agree with this recommendation?

A. No. Over the term of Companies' current rate plan, this program has allowed over 400 households who are either identified as LMI or within Disadvantaged Communities to access building envelope programs, that they otherwise would not have been able to access. The Companies realize that these type of activities ultimately may be incorporated as part of a standardized statewide model in the NE:NY Interim Review. However, the Companies would like the ability to continue these offerings through the Rate Year and Data Year 1. Until criteria or direction is established for future years (2026-2030), the Companies propose to include funding for this program in the first two years of any rate plan that may be adopted in these proceedings.

Q. WE ACT Witness Sonal Jessel (at 66) recommends that the Companies track and report on dwellings that were deemed ineligible for energy efficiency measures. Does the Panel agree?

A. No. The Companies have no incentive to deem dwellings ineligible for energy efficiency measures. The reporting requirement recommended by WE ACT Witness Jessel would create a burden with no offsetting benefit.

Q. WE ACT Witness Jessel (at 68-69) recommends that the Commission require the Companies to quantify and track health improvements, wealth building opportunities, energy resilience and bill reductions resulting from the Companies activities in Disadvantaged Communities. Do the Companies agree with this recommendation?

A. No. The metrics suggested regarding health improvements and economic development are not information within the Companies' purview or control. Bill reductions cannot be ascribed to a particular set of Company activities, and the reporting burden or reporting on customers' bill amounts alone would not be offset by a discernable benefit.

Q. WE ACT Witness Jessel recommends that the Companies expand contractor partnerships to ensure a diverse workforce that speaks multiple languages. Do the Companies agree?

A. The Companies share this objective but do not believe a specific requirement would be appropriate. The Companies actively work to develop and expand the contractor network for energy efficiency and building electrification programs, and proposed a Disadvantaged Communities outreach initiative which would, in part, include building contractor networks that support energy efficiency participation in Disadvantaged Communities.

Q. Please provide an overview of the SEP's recommendations (at 43-51) for the Company's Energy Efficiency Information Technology Programs, specifically Clean Energy 2.0 and Green Button Connect.

A. The SEP does not support the implementation of these programs because the Companies did not include sanction papers for the Clean Energy 2.0 and Green Button Connect in their initial IT submission.

Q. Do the Companies agree with the SEP's recommendations concerning these programs?

A. No. As described in the Companies' Information Technology and Digital Panel rebuttal testimony, a formal sanction paper is not generated until a project or program has secured funding. The Companies have, however, provided documentation that should address the SEP's concerns in the form of an Investment Estimation Tool ("IET") for each of the programs. The IETs were submitted in the Companies' response to IR No. DPS-457 Supplemental, Attachments 39 and 40 which, was Staff included in Exhibit ___ (SITP-1). Further, Green Button Connect is available to National Grid's Upstate New York customers, with plans approved for deployment in National Grid's Massachusetts service territory. The Companies believe it would be a disservice to exclude the Companies' customers from the benefits associated with the program. Clean Energy 2.0 has been put into service in both Massachusetts and Upstate New York. Project execution and completion times across all programs would suffer in the Companies' territories, if the Companies are left on the outdated system.

Q. Regarding Clean Energy 2.0, please describe the associated documentation that the Companies are providing in support of this Project?

A. In the response to IR No. DPS-457-Supplemental, Attachment 39, which Staff provided in Exhibit___ (SITP-1)) is the Cost Estimate IET for the Clean Energy 2.0 project. As documented in the IET for Clean Energy 2.0 ("Investment Details" tab), deficiencies in the current InDemand system result in delays and complications when adding new programs or making a change in reporting metrics. The Clean Energy 2.0 system would replace the InDemand system. Deploying the Clean Energy 2.0 System will be vital, not only to facilitate program evolution and anticipated reporting changes in support of the NE:NY Strategic Framework for 2026-30, but to support Energy Efficiency program tracking and reporting in the near term.

Q. Regarding Green Button Connect, please describe the associated documentation that the Companies are providing in support of the program.

A. In the response to IR No. DPS-484, included in Exhibit ___ (CP-1R)), the Companies provided the costs for Green Button connect.

Q. Please explain why the Companies are proposing to implement Green Button Connect.

A. The Commission's December 13, 2018 "Order Adopting Accelerated Energy Efficiency Targets" in Case 18-M-0084 (at pp 43-45) and the May 29, 2020 Staff "Whitepaper Regarding a Data Access Framework" in Case 20-M-0082 (at 5-6), provide guidance

directing expedited implementation of Green Button Connect (or a tool with similar capabilities) by utilities. As customers increasingly desire to, and are called upon to, manage their energy usage as part of the clean energy transition, it is increasingly important to provide them a readily accessible means to review their energy usage data and/or share their energy usage data with third-party providers of energy management services. Moreover, as combination utilities implemented Green Button Connect, Staff encouraged the Companies to adopt the platform for their gas-only customers, noting that the Commission's prior orders do not limit implementation to combination utilities. *See* Companies' response to IR No. DPS-708, included in Exhibit ___ (CP -1R)). Green Button Connect is the Companies' selected vendor to provide this functionality. Niagara Mohawk customers already are able to share data with third parties that have registered as part of that company's Green Button Connect program. The Companies seek to provide access to the program to customers in the Companies' service territories, which would make this functionality available statewide. For commercial and industrial customers with facilities in multiple territories, this will enable such customers to access their usage data more holistically. Leveraging economies of scale and utilizing learnings from the launch of Green Button Connect in Upstate New York will help to reduce costs.

Q. The SCSP (at 45-48) recommends that the Commission reject the proposal for five Strategic Account Managers ("SAM") FTEs. Do the Companies agree with the SEP's recommendation?

A. No. Contrary to the SCSP's claim, the SAM positions are not designed to be redundant with existing efforts to support the Companies' large customers. The SAMs were designed to work in a coordinated effort with multiple departments within the Companies with which these large customers interact. This includes billing, operations, engineering, clean energy transition, as well as stakeholder, regulatory and community outreach. They were also designed to be the single point of contact for these customers as well as spend the necessary time to help these customers be leaders in the clean energy transition. This entails a significant amount of time and effort not only to coordinate within National Grid regarding the customers' needs, but to help educate, motivate, and lease across multiple areas of these customers' own large organizations to put together longer-term plans that all parties can work to achieve.

Engaging these highly visible customers to work with the Companies as leaders in their field and their community will help to accelerate the uptake of developing technologies. Allowing SAMs to work with these customers in this manner will also help to enable the existing Customer Solutions team to work with additional large customers that they are not presently able to fully attend to. All these efforts will be required as the Companies work toward the changes driven by the NE:NY Interim Review recommendation for 2026 – 2030 and the required transition in 2024 and 2025. These changes will require longer project

cycle times and additional times spent with customers, as the measures and technologies deemed "strategic" require more education, in depth review, analysis, and regular interaction with the customer.

Regarding the utilization of current energy efficiency FTEs, these FTEs are being utilized in many areas of the full market which include working with the channel partners, increasing the participation in the Demand Response programs, working on technical reviews required for Commercial and Industrial weatherization, as well as program management for new programs the Companies are trying to establish in the market. This level of staffing has enabled us to achieve just above target through calendar year 2022. But the Companies forecast significant gaps in their ability to achieve the NE:NY targets in calendar year 2023 and beyond. Therefore, these FTEs are fully dedicated to the energy efficiency efforts noted above and will not have the bandwidth required to deliver the growth in account management activities that is undoubtedly required.

XI. Capacity Demand Metrics

Q. The SEP (at 87-88) recommends that the Companies should continue to track and report on the Capacity Demand Metrics agreed to in 2019 KEDNY and KEDLI Rate Cases. Do the Companies agree with this recommendation?

A. No. The Companies' Capacity Demand Metrics were established solely for the purpose of determining whether the Companies would be permitted to recover the costs of the Long-Term Capital Capacity projects in the 2019 KEDNY and KEDLI Rate Cases. No other

utility in the state is subject to such metrics, much less any related reporting requirements, and much of the data is included in reports filed in generic proceedings opened by the Commission following the 2019 KEDNY and KEDLI Rate Cases. Cost recovery of the Long-term Capital Capacity projects is no longer at issue. For these reasons, the metrics are no longer necessary and should be discontinued.

XII. Demand Response Costs

Q. Please provide an overview of NYC Witness Chait's testimony regarding the Companies' firm gas demand response ("DR") programs.

A. NYC Witness Chait supports (at 38-39) the Companies' proposal to recover non-labor demand response program capacity and performance payment costs in the demand response O&M ("DROM") component of the delivery rate adjustment, but she opposes the Companies' proposal to recover marketing and administrative costs for the Load Shedding and Bring Your Own Thermostat ("BYOT") programs via the DROM, and instead supports recovery of those costs via base delivery rates.

Q. Do the Companies agree with NYC Witness Chait's recommendation?

A. No. It is standard practice among utilities in New York to recover all non-labor program costs, including marketing and administrative, through a surcharge. For example, this is the practice approved for Niagara Mohawk's gas and electric demand response programs and the practice utilized for Con Edison's electric demand response programs. It is also worthy of note that the marketing and administrative costs associated with the gas demand

response programs are relatively small in comparison to total program expenditures (they represented approximately nine percent of the winter 2022-23 DR program costs) and that the majority of those costs derive from administrative costs for the BYOT program, which vary based on the level of participation in that program. From the Companies' perspective, these factors support continued recovery of these demand response costs through a surcharge.

Q. NRG Witness Reyes (at 4) recommends that the Companies' tariffs should be revised to provide ESCOs with specific details about demand response events. Does the Panel agree?

A. No. Demand response events incur infrequently and result in relatively modest usage impacts to participants. NRG Witness Reyes has not identified how ESCOs would benefit from this information. Moreover, tracking and reporting the requested information could cause the Companies to incur additional costs. In the absence of a clear demonstration of net benefits, Mr. Reyes' recommendation should be rejected.

XIII. DPAs and EBD Customers

Q. What were the concerns raised by PULP Witness Yates regarding DPAs?

A. PULP Witness Yates proposes (at 66) that KEDNY adopt a procedure to take financial information for non-standard DPAs over the phone. Also, Mr. Yates proposes (at 67) that the Companies adopt a goal of 33 percent DPAs compared to accounts in arrears.

Q. What is the Panel's response to these proposals?

A. KEDNY customers currently have an option to do a Financial Statement and provide proof without going into a walk-in office. The customer can complete the Online Financial Statement and upload proof through the form. There are constraints in the CRIS customer system, which is used for KEDNY customers, that limit the input of financial statement information directly into the customer system. Once the conversion of KEDNY accounts from the legacy CRIS system into the CSS system is complete, KEDNY customers will have the option to complete a Financial Statement over the phone in a similar fashion that Niagara Mohawk and KEDLI customers have today. The Companies submit that once the conversion takes place, the issue raised by PULP will be resolved.

Regarding the establishment of a goal of a participation rate of 33 percent of customers in arrears enrolled in a DPA, there are several factors that influence the participation rate of in-arrears customers in the Companies' DPA programs. The Companies do not have direct influence over many of these factors, and thus cannot be expected to be able to directly manage DPA participation rates.

One factor is the perceived risk of service termination. For example, during COVID-19 moratorium on service terminations, the number of accounts enrolled in an active DPA fell by about 50 percent across the Companies, which was outside of the Companies' control. In addition, requirements regarding service terminations during the winter may impact whether a customer enrolls in a DPA, which is also outside the Companies' control.

In addition, customers who default from a DPA are not eligible for another DPA unless their financial circumstances have significantly changed, in accordance with HEFPA regulations. PULP Witness Yates' recommended metric divides the number of active DPA participants by the number of accounts in arrears. Because not all accounts in this proposed denominator are actually eligible for a DPA, it is an inappropriate metric.

Further, KEDNY and KEDLI both offer alternative short-term payment products that customers may prefer over a DPA. These short-term credit products are most appropriate for accounts that are only 30-60 days in arrears. This aging bracket is the largest 30-day aging bracket amount of all accounts in arrears. These short-term credit products are not included in payment agreement counts, which may be a different practice than other utilities. Therefore, if the customers in these short-term credit products were included in the payment agreement count, then the payment agreement rate would be higher. For the foregoing reasons, PULP Witness Yates' recommendation concerning a DPA participation rate goal should be rejected.

Q. What was PULP Witness Yates' recommendation concerning EBD protections?

A. PULP Witness Yates recommends (at 65) that the Companies should increase their marketing efforts to have more customers registered as EBD.

Q. What is the Companies' response to these recommendations?

A. The Companies send out a quarterly publication called WeConnect. The content of this publication was recently enhanced to include more information regarding the EBD and Life support programs. Additionally, as part of a comprehensive enhancement to the customer websites, a dedicated Protections landing page is being designed to allow a customer to self-educate and enroll online. The Companies believe that these enhancements address PULP's recommendations.

Q. PULP Witness Yates asserts (at 73-74) that it is important for the Companies to adopt policies and procedures that address situations in which a customer indicates that they may be a victim of domestic violence. Does the Panel have any comments concerning this testimony?

A. The Companies plan to develop a standard operating procedure for addressing such situations.

XIV. Earnings Adjustment Mechanisms

Q. Please provide an overview of the Companies' EAMs proposed in this proceeding.

A. The Companies proposed four EAMs in this proceeding. Two of the proposed EAMs would continue the Energy Efficiency EAM - Share the Savings and the Energy Efficiency EAM - LMI, both established in the 2019 KEDNY and KEDLI Rate Cases, and two of the proposed are new EAMs, System Efficiency EAM - Gas Demand Response ("DR"), and an LMI Engagement EAM – Energy Affordability Program ("EAP") Enrollment, for a total

of four proposed EAMs providing a maximum of 14 basis points in potential earnings to KEDNY and a maximum of 13.5 basis points in potential earnings to KEDLI.

Q. Please provide an overview of the SEP's overall recommendations for the Companies' EAMs proposed in this proceeding.

A. The SEP (at 56-91) does not support the continuation of any of the current EAMs established in the 2019 KEDNY and KEDLI Rate Cases and does not support the newly proposed DR EAM and EAP enrollment EAM. The SEP opposes the continuation of the current Energy Efficiency EAM - Share the Savings and the Energy Efficiency EAM – LMI stating that the Commission has provided additional guidance regarding development of energy efficiency EAMs in its July 20, 2023 NE:NY Order specifically determining that it will not consider energy efficiency EAMs proposed in a rate case filing. The SEP also does not support the Companies' Demand Response EAM

Q. Do the Companies agree with the SEP's recommendation that the Commission not continue the Companies' two current Energy Efficiency EAMs for Share the Savings and LMI?

A. Yes. Although the Companies believe that EAMs play an important role in driving innovation and overachievement of statewide targets, the Companies agree with Staff that the energy efficiency EAMs not be included in this proceeding as a result of the Commission's July 20, 2023 NE:NY Order indicating that the Commission will not consider energy efficiency EAMs proposed in a rate case filing. The Companies will

continue to evaluate and develop future EAM opportunities to include in the NE:NY Interim Review.

Q. Please address the SEP's testimony that the proposed Demand Response EAM metric aimed at maximizing participation in demand response programs does not run counter, but instead, aligns with the Companies' business model.

A. The Companies disagree that the Demand Response EAM would reward the Companies for performance that already aligns with their business model. Although Staff is correct that the Companies currently include the Demand Response programs in their design day forecast to meet design day supply needs (SEP at 78), the use of gas demand response is not "business as usual" as no other New York gas utility is operating as extensive a gas demand response program to reduce peak demand. The Demand Response EAM targets have been established to incentivize the Companies to increase participation in the demand response program even more aggressively which not only will meet customer peak day supply needs but also potentially avoid the need for new gas infrastructure. Consequently, demand response is in essence a form of Non-Pipe Alternatives ("NPAs"), although not targeting a specific infrastructure project. The reduction of traditional plant-in-service is something the Commission in its Gas Planning Order[1] has recognized can afford shareholders the opportunity to share in the net benefits, because the traditional utility business model would be to pursue new gas infrastructure to meet customer demand.

[1] Case 20-G-0131, *Proceeding on the Motion of the Commission in Regard to Gas Planning Procedures* ("Gas Planning Proceeding"), Order Adopting Gas System Planning Process (issued and effective May 12, 2022) ("Gas Planning Order") at p. 43.

Q. Does the Panel agree with the SEP's recommendation to reject the Demand Response EAM?

A. No. The DR EAM will incentivize the Companies not only to increase enrollment in the demand response programs from the enrollment achieved in the first three years of this innovative portfolio of programs, but also to innovate further to improve performance (and thereby further reduce peak gas demand) during events. Moreover, it will assist in reducing the need for future traditional gas plant in-service. For these reasons, the EAM targets will require the Companies to perform in a way that does not align with its business model and is not "business as usual" in order to meet the established targets. One of the main policy directions in the Commission's REV Track Two Order (Order Adopting a Ratemaking and Utility Revenue Model Policy Framework "Proceeding on Motion of the Commission in Regard to Reforming the Energy Vision" (Case 14-M-0101), Issued and effective May 19, 2016) is that cost-of-service ratemaking, while it will remain applicable to conventional utility investments for the near future, inhibits innovation in general, and discourages numerous activities that utilities need to undertake to implement REV. Consumers benefit when utilities aggressively pursue more economic alternatives to traditional rate based capital investment." (REV Track Two Order at 23). This Demand Response EAM furthers this REV Track Two policy.

Q. Have other utilities in New York state received approval of EAMs that reward achievement on their demand response programs?

A. Yes, in July of this year the Commission issued an order adopting the Con Edison joint proposal (Cases 22-E-0064 and 22-G-0065), in which it approved an Electric Demand Response EAM that "promotes grid flexibility by developing a larger and more reliable demand response resource that can be called on to reduce peak demand … during system contingencies." (Appendix 8, p. 8). Although that EAM and the Gas Demand Response EAM address different energy types, and although there are some differences in the methodologies used to calculate the respective EAMs, the principle of promoting system flexibility and reducing peak demand by a method that is not business as usual is the same. There is no reason why demand response should be viewed as behavior that can provide customer benefits and can be incentivized for electric utilities but not for gas utilities.

Q. Has the Commission approved other incentive mechanisms for programs or solutions that reduce peak gas demand?

A. Yes. The Commission has in principle endorsed an incentive mechanism for NPAs for both the Companies and other utilities in the state. That mechanism is intended to incentivize utilities to pursue demand-side solutions in lieu of infrastructure projects on which they would earn a traditional rate of return. Although NPAs are intended to address localized areas, whereas the gas demand response programs address systemwide peaks, the principle behind both are the same - they reduce peak gas demand, thereby deferring or avoiding the need for new or upgraded gas infrastructure and cause the Companies to forgo

a rate of return on that deferred or avoided infrastructure investment. Because they both serve the same purpose, if NPAs are granted such an incentive mechanism, gas demand response should be as well.

Q. Please address the SEP's claim (at 82-83) that the EAP enrollment EAM metric does not match the criteria the Commission provided for customer engagement EAMs in the REV Track Two Order.

A. The Companies disagree that the customer engagement referenced in the REV Track Two Order applies to the EAP enrollment EAM. In the REV Track Two Order the Commission was referencing engagement by customers in certain programs such as DER where the utility can play a facilitating role by connecting customers to vendors, but where the market participants also play the greater role. In contrast, the Companies' proposed EAP Enrollment EAM is intended to encourage further investment and innovation to reach customers in Disadvantage Communities who can benefit from the EAP program and become eligible for benefits and savings where the Companies play the major role. An EAP enrollment EAM will advance the CLCPA's goal of affordability as a key value in the energy transition.

Q. Please address the SEP's claim (at 83) that the EAP enrollment EAM metric would reward Companies with a windfall in the event of an economic downturn.

A. The Companies disagree that the EAP enrollment metric would reward the Companies with a windfall during an economic downturn because the metric can be designed to be adjusted

to account for an increase in the number of customers eligible for the EAP program due to economic conditions. The Company proposes to work with Staff and the parties to develop a mutually agreeable metric and targets that account for economic downturns.

Q. Does the Panel agree with the SEP's recommendation not to approve the EAP Enrollment EAM?

A. No. The EAP Enrollment EAM would incentivize the Companies to further innovate to increase awareness of the available benefits to those in Disadvantaged Communities, goes beyond business as usual, and advances the CLCPA's goals of an equitable and affordable energy transition.

Q. Why is it important for the Commission to continue EAMs for utilities?

A. In the REV Track Two Order the Commission established a new set of incentives it termed EAMs that were geared towards near term measures "to create customer savings and develop market-enabling tools." (REV Track Two Order at 12). In their direct testimony, the SEP states (at 57) that the Track Two Order designed EAMs predominantly for electric utilities. The Commission, however, has established EAMs for gas utilities, and it is imperative that gas utilities and their shareholders continue to be rewarded similar to electric utilities for innovative actions that run counter to their business model of earning a rate of return on traditional plant in-service while providing benefits to customers and advancing the CLCPA. The Commission has recognized incentives for NPAs that avoid traditional gas infrastructure where it is economical to do so. However, incentives are

needed in other instances as well. In order to achieve the goals of the CLCPA, gas utilities need to reduce their investment in traditional infrastructure, discourage new customers from using natural gas, and encourage existing customers to convert from gas to electric, all of which are counter to the traditional utility business model. Incentives in the form of EAMs will reward gas utilities and their shareholders for aggressively pursuing programs that advance the CLCPA goals but result in a lower earned rate of return.

XV. Conclusion

Q. Does this conclude the Panel's rebuttal testimony?

A. Yes.

KEDNY KEDLI8 Case 23-G-0225/0226 Data Requests

Request for Information

FROM: Jillian Kasow

TO: National Grid

SUBJECT: National Grid (KEDNY KEDLI)

Request:

Referring to page 13, lines 4-8, of the Customer Panel's testimony, it states, "In early 2022, as further detailed below, National Grid engaged ESource, a research, consulting, and data science firm, to conduct a study to help the Companies develop a better understanding of their LMI customers' energy needs and to create a forward-thinking customer experience strategy."

a. Please provide the ESource study.

b. How does the ESource "forward-thinking customer experience strategy" differ from the responsibilities of the Residential Segment Energy Equity Analysts proposed by the Companies (see page 25 of the Customer Panel testimony)?

Response:

a. Please see the Companies' response to DPS-347, question 3, including DPS-347 Attachment 1 and 2, for the ESource study results.

b. The Residential Segment Energy Equity Analyst's responsibilities do not differ but support the Esource "forward - thinking customer experience strategy" implementation and adoption across KEDNY and KEDLI. The Companies currently have half an FTE focused on the holistic overarching strategy for the LMI segment in KEDNY and KEDLI with no FTEs focused on the holistic strategy for Disadvantaged Communities across the Companies' activities. The Residential Segment Energy Equity Analyst roles would help align with both federal and state policy objectives related to investment in Disadvantaged Communities and better serve LMI customers.

Energy equity recognizes that Disadvantaged Communities have been historically marginalized and overburdened by pollution, underinvestment in clean energy infrastructure, and lack of access to energy efficient housing and transportation.

One analyst will be focused on developing a comprehensive energy equity strategy across all business units that includes the elements and recommendations from the Esource "forward-thinking customer experience strategy." This analyst will support the existing 0.5 FTE focused on the LMI segment strategy and follow an approach that combines data science and quantitative measures with ethnographic research to attempt to completely understand our customers and their communities. The analyst will segment the residential LMI customers using Esource cohorts and the Companies' current residential personas data to target programs, services, marketing, and communication at the microlevel.

The second analyst will utilize Esource results and internal and external data to identify gaps in the current offerings while developing and growing new and existing programs to reach customers in Disadvantaged Communities. Additionally, the analyst will measure the performance of these programs and develop strategies to increase customer participation among LMI customers and customers in Disadvantaged Communities. This work will be critical to reducing energy burdens and meeting the CLCPA goals of 35-40 percent of climate action benefitting Disadvantaged Communities.

KEDNY KEDLI Case 23-G-0225/0226 Data Requests

Request for Information

FROM: Sandra Sweet

TO: National Grid

SUBJECT: Exhibit_(ITDP-4)

Request:

In all interrogatories, all requests for workpapers or supporting calculations shall be construed as requesting any Word, Excel or other computer spreadsheet models in original electronic format with all formulae intact and unlocked.

Referring to Exhibit___(ITDP-4), which shows capital expenditures for forecasted information technology (IT) projects for Fiscal Year (FY) 2025 through FY 2028. For each project identified in Exhibit___(ITDP-4):

1. Provide sanction papers supporting the project.

2. Provide a detailed description for each project, if not included in the sanction documents.

3. Provide the benefit cost analysis for each project supporting the each of the Companies' position to pursue the project.

4. Provide a description of how each Company developed the budgeted project cost for both capital and operating expenses for each year through 2028 related to each project. This should include any relevant information on individual vendor quotes received for estimating project costs. Include all supporting workpapers and calculations.

5. Explain whether each of the Companies' Rate Year forecast includes any type of savings associated with implementing each project. If so, identify how much savings were forecast and identify where these savings are shown in the Rate Year forecast. If not, explain why each Company believes that no savings will be realized.

6. Explain whether project implementation related to each project that has already been commenced is on track with the forecasted schedule.

7. Explain how the project compares to industry-wide best practices.

8. Identify whether the project was included as part of the Annual Capital Budgeting process and Capital Project Prioritization process using Copperleaf (Asset Management Program)?

9. Provide Gantt charts for each project.

Response:

1. As a supplemental response to DPS-457, please see Attachment 1 for a table that lists the investments included in Exhibit ___ (ITDP-4CU) in the Company's corrections and updates filing in these proceedings. Additionally, Attachment 1 indicates the responses where the Company provided an Investment Estimation Tool ("IET") or sanction paper for each discreet IT&D investment, or if not previously provided, the corresponding attachment included in this supplemental response where an IET or sanction paper for remaining investments can be found.

   As indicated in the Company's response to DPS-457, each IET is a workbook created by the IT&D function to capture key attributes of proposed future investments, including the investment description, cost estimates, scope, timing, and the expected benefitting operating company, among other details. Sanction papers provide investment details that have gone through additional Company review and approval beyond the work performed in preparing an IET. For each investment where one is available, sanction papers are provided in lieu of the project's IET.

   Attachments 46 and 65 – 72 contain confidential information. The Company submitted the confidential attachments to the Administrative Law Judges in accordance with the Protective Order issued in these proceedings, along with a request for confidential treatment.

Short Description	Develop forward looking technology capabilities that support improved customer facing Clean Energy and Energy Efficiency service offerings.
What is the aim? What is the Functionality?	• Continue support of functional changes in the **InDemand** system to meet the Energy Efficiency targets National Grid committed to with the State Regulators. • As the legacy out of support InDemand platform is approaching end of life and cannot be sustained for much longer National Grid is at great risk of loosing ability to deliver Energy Efficiency programs and other energy services to our customers. The time to act is now to start building new technology platform that provides modern and sustainable capabilities for promotion, sales, fulfillment, delivery and reporting of Clean Energy products. New **Clean Energy 2.0** platform will replace InDemand system capabilities limited to Energy Efficiency and will include other carbon reduction and electrification programs. • Deliver ongoing **data sharing and integration with Energy Efficiency delivery partners** to support existing and new clean energy programs
Solves the problem/s	• If InDemand system changes and enhancements are not implemented National Grid will not be able to achieve, track and report energy saving targets, effectively process incentives and rebated to customers and will not earn shareholder benefit awarded by regulators •National Grid is struggling to keep up with the fast-evolving Clean Energy (CE) needs. The current legacy InDemand application has short comings because of the outdated platform, poor data quality and not having matured business processes in place. The Clean Energy space is growing very rapidly and the current platform does not provide flexibility or self service capabilities to be able to react to these changes quickly. As a result, National Grid is not meeting some existing CE objectives and incentives and is at risk for not meeting future objectives creating significant financial and reputational risk. •To support effective collaboration with energy efficiency programs delivery partners and to enable them to offer customer energy saving programs National grid needs to invest in data sharing and integration solutions enabling these partners effective and compliant operations.
Which Impacts	•Delivery of Energy Efficiency services and products to customers is mandated. •Ability to offer and slow speed to market for new and enhanced Clean Energy programs •Loss of productivity and ability to leverage external partners expertise in delivery of Energy Efficiency and other Clean energy products to end customer
Resulting In	National Grid will not be able to meet current and future obligation and regulatory commitments to deliver Energy Efficiency savings to our customers and implement Clean Energy products and services to support Carbon Free energy vision.
Business Drivers	National Grid must make the mandatory updates as directed by the state regulators to the InDemand system in support of implementation, audit and reporting of Energy Efficiency (EE) programs To achieve evolving Clean Energy (CE) objectives we will replace over time outdated systems, resolve data quality issues and inefficient business processes. National Grid is not meeting some existing CE regulatory targets and incentives and is at risk for reaching future objectives creating significant financial and reputational risk.

Business	Business Outcomes
Business	Meet Energy Efficiency targets for customer energy savings and incentives
Business	Shorter cycle and efficient process for offering customers innovating Clean Energy programs and opportunities
Business	Manage operating cost through the migration of customer transactions to self-serve digital platforms.
Business	Provide a digital platform that can be built upon for future initiatives.

Short Description	Green Button Connect (GBC) My Data is a means by which utilities can enable customers to share their energy consumption data with 3rd Party energy solution providers and companies (such as Retail Energy, Solar, EE, etc..). It allows customers to opt-in or opt-out of having their own energy usage information sent to those third party energy efficiency providers who can then provide recommendations on energy efficiency programs. NY PSC has mandated that NY utilities implement Green Button Connect: - See NY Public Service Commission (PSC) mandate Case 17-E-0238 and 17-G-023 for UNY. - See also 2022Nov11 email from Kris Kiefer Assistant General Counsel & Director (NY Regulatory) and opinion that the PSC expects gas companies to implement GBC. Short Term (Phase 1) of this initiative aims at extending this capability to DNY KEDNY/KEDLI monthly read customers. Long Term (Phase 2) of this initiative is to fund analysis of a GBC redesign and implementation to resolve capacity and architecture issues related to handling interval data which is collected for many commercial and industrial customers. This needs to integrated with the AMI solution.
What is the aim? What is the Functionality?	
Solves the Problem of:	Providing standardized accessibility for all NYS monthly-read customers to allow the Distributed Energy Resources (DER) market so they can make data-informed decisions that will help NYS to achieve clean energy policy objectives.
Which Impacts:	Anticipated Regulatory Compliance – Solution build needs to be compliant with GBC standards and requirements per PSC mandate.
Resulting In:	Benefits to Customers including: - Saving Money: understanding home energy usage and finding ways to reduce consumption and reduce bills - Insight: access to web portals that can analyze energy usage and provide actionable tips. - Heating and Cooling: customized heating and cooling activities for savings and comfort - Education: community and energy-efficiency competitions. - Retrofits: improved decision-support tools to facilitate energy-efficiency retrofits - Verification: measurement of energy-efficiency investments - Real Estate: provision of energy costs for tenants and/or new home purchasers - Solar: optimize the size and cost-effectiveness of rooftop solar panels
Business Drivers:	- Deliver for our customers efficiently - Grow our organizational capability - Align our DNY offerings with our existing UNY offering

Outcome Number	Ali
Business Outcome 1	A highly reliable, user-friendly, and scalable Green Button Connect implementation will: - enable NG's KEDNY/KEDLI Gas business to to share their energy consumption with 3rd parties and companies - Regulatory Compliance

Deliverables & Milestones

Click Here For Example

Deliverables	Deliverable Description	Kick Off Year (If Known)	Cost [$M]	Milestone / Completion	Strategic Objective Linked To Outcome
Deliverable 1	Release of GBC in KEDNY	FY24	1.04	All KEDNY customers will have ability to allow third party vendors to access their billing data	Mandated
Deliverable 2	Release of GBC in KEDLI	FY24	1.04	All KEDLI customers will have ability to allow third party vendors to access their billing data	Mandated
Deliverable 3					
Deliverable 4					
Deliverable 5					

Known Dependencies, Risks & Assumptions

Dependencies:		
Select 'Dependency' category from Drop Down then add more detail.	Other Programmes This Project is Dependent on	CRIS to CSS conversion is complete for KEDNY release
Significant Risks:	Delivery Risk	If NG IT and/or business resources will not be available to support the project due to system wide or regional events, it will have negative impact on our customers
Select 'Risk' category from Drop Down then add more detail.	Scope	GBC initiative will enable secure data-sharing with the 3rd parties and will provide a simple, customer-controlled authorization process. The customer can define the length of that authorization and revoke authorization at any time. The initiative will also ensure customer privacy, secure transmission of data, data integrity and accuracy.
	Delivery Risk	Resources at UtilityAPI are available to deliver
Assumptions:	Resource	Project cost and duration estimate was developed in 2017 using the standard IT estimating methodology at the time.
Select 'Assumption' category from Drop Down then add more detail.	Technology	Cost, time, and resource estimates are based on the assumption that the solution will be built similar to NIMO implementation
	Technology	This investment assumes using existing API and database built with bill print data and CSS billing data
	Deployment Schedule	Business benefits generated by this project will start in FY24 based on the assumption that the project is completed in early FY24

	Technology	Capability to store 24 months of bill print data for both KEDNY and KEDLI

KeySpan Gas East Corporation d/b/a National Grid
The Brooklyn Union Gas Company d/b/a National Grid NY

KEDNY KEDLI Case 23-G-0225/G-0226 Data Requests

Request for Information

FROM: Tessie Mar

TO: National Grid

SUBJECT: Green Button Connect

Request:

In all interrogatories, all requests for workpapers or supporting calculations shall be construed as requesting any Word, Excel or other computer spreadsheet models in original electronic format with all formulae intact and unlocked.

1. Explain whether Green Button Connect will be implemented for all KEDLI and KEDNY customers and customer classes. If not, what factors did the Companies consider in determining which customers to target.

2. Provide an estimate of the ongoing annual costs of implementing Green Button Connect following the initial set up costs requested for the Rate Year.

3. Have the Companies leveraged any lessons learned from the implementation of Green Button Connect in the National Grid Upstate service territory? If so, what information was leveraged and what if any affect has that had on the Green Button Connect costs requested by KEDLI and KEDNY?

Response:

1. The Companies proposed implementation of Green Button Connect ("GBC") would be available for all KEDNY and KEDLI customers and customer classes.

2. The Companies forecast $0.490 million in annual run-the-business costs, which consists of IT-related labor to maintain GBC and annual software licensing fees, as reflected in Attachment 1. In addition, the Companies forecast $0.360 million in annual software version upgrade and refresh costs, which are also reflected in Attachment 1. The Investment Estimation Tool ("IET") provided in Attachment 1 is a workbook created by the Information Technology and Digital ("IT&D") function for yet-to-be sanctioned work; it captures key attributes of proposed future investments.

Additionally, the Companies propose one-half Full-Time Equivalent ("FTE"), a Green Button Connect Data Analyst, to support day-to-day operations and platform optimization. *See* Diret Testimony of the Customer Panel at p. 118; *see also* Exhibit__ (CP-6), Schedule 5, p. 8.

3. Yes, the Companies will leverage lessons learned from Niagara Mohawk Power Corporation d/b/a National Grid's ("Niagara Mohawk") GBC implementation. The Companies will retain those aspects of the GBC implementation that have been successful, while working with Niagara Mohawk to identify opportunities to improve the platform and make data more easily accessible to customers and third parties. Importantly, Niagara Mohawk has already setup the technical connection for making meter data available to customers and third parties – the application program interface ("API"). The Companies will leverage Niagara Mohawk's API dataflow and setup processes in their GBC rollout.

Short Description	Green Button Connect (GBC) My Data is a means by which utilities can enable customers to share their energy consumption data with 3rd Party energy solution providers and companies (such as Retail Energy, Solar, EE, etc..). It allows customers to opt-in or opt-out of having their own energy usage information sent to those third party energy efficiency providers who can then provide recommendations on energy efficiency programs. NY PSC has mandated that NY utilities implement Green Button Connect:
What is the aim? What is the Functionality?	- See NY Public Service Commission (PSC) mandate Case 17-E-0238 and 17-G-023 for UNY. - See also 2022Nov11 email from Kris Kiefer Assistant General Counsel & Director (NY Regulatory) and opinion that the PSC expects gas companies to implement GBC. Short Term (Phase 1) of this initiative aims at extending this capability to DNY KEDNY/KEDLI monthly read customers. Long Term (Phase 2) of this initiative is to fund analysis of a GBC redesign and implementation to resolve capacity and architecture issues related to handling interval data which is collected for many commercial and industrial customers. This needs to integrated with the AMI solution.
Solves the Problem of:	Providing standardized accessibility for all NYS monthly-read customers to allow the Distributed Energy Resources (DER) market so they can make data-informed decisions that will help NYS to achieve clean energy policy objectives.
Which Impacts:	Anticipated Regulatory Compliance – Solution build needs to be compliant with GBC standards and requirements per PSC mandate.
Resulting In:	Benefits to Customers including: - Saving Money: understanding home energy usage and finding ways to reduce consumption and reduce bills - Insight: access to web portals that can analyze energy usage and provide actionable tips. - Heating and Cooling: customized heating and cooling activities for savings and comfort - Education: community and energy-efficiency competitions. - Retrofits: improved decision-support tools to facilitate energy-efficiency retrofits - Verification: measurement of energy-efficiency investments - Real Estate: provision of energy costs for tenants and/or new home purchasers - Solar: optimize the size and cost-effectiveness of rooftop solar panels
Business Drivers:	- Deliver for our customers efficiently - Grow our organizational capability - Align our DNY offerings with our existing UNY offering

Outcome Number	Ali
Business Outcome 1	A highly reliable, user-friendly, and scalable Green Button Connect implementation will: - enable NG's KEDNY/KEDLI Gas business to to share their energy consumption with 3rd parties and companies - Regulatory Compliance

Deliverables & Milestones

Click Here For Example

Deliverables	Deliverable Description	Kick Off Year (If Known)	Cost [$M]	Milestone / Completion	Strategic Objective Linked To Outcome
Deliverable 1	Release of GBC in KEDNY	FY24	1.04	All KEDNY customers will have ability to allow third party vendors to access their billing data	Mandated
Deliverable 2	Release of GBC in KEDLI	FY24	1.04	All KEDLI customers will have ability to allow third party vendors to access their billing data	Mandated
Deliverable 3					
Deliverable 4					
Deliverable 5					

Known Dependencies, Risks & Assumptions

Dependencies:		
Select 'Dependency' category from Drop Down then add more detail.	**Other Programmes This Project is Dependent on**	CRIS to CSS conversion is complete for KEDNY release
Significant Risks:	**Delivery Risk**	If NG IT and/or business resources will not be available to support the project due to system wide or regional events, it will have negative impact on our customers
Select 'Risk' category from Drop Down then add more detail.	**Scope**	GBC initiative will enable secure data-sharing with the 3rd parties and will provide a simple, customer-controlled authorization process. The customer can define the length of that authorization and revoke authorization at any time. The initiative will also ensure customer privacy, secure transmission of data, data integrity and accuracy.
	Delivery Risk	Resources at UtilityAPI are available to deliver
Assumptions:	**Resource**	Project cost and duration estimate was developed in 2017 using the standard IT estimating methodology at the time.
Select 'Assumption' category from Drop Down then add more detail.	**Technology**	Cost, time, and resource estimates are based on the assumption that the solution will be built similar to NIMO implementation
	Technology	This investment assumes using existing API and database built with bill print data and CSS billing data
	Deployment Schedule	Business benefits generated by this project will start in FY24 based on the assumption that the project is completed in early FY24
	Technology	Capability to store 24 months of bill print data for both KEDNY and KEDLI

Due Date: July 24, 2023 NG Request No. NG-865

KeySpan Gas East Corporation d/b/a National Grid
The Brooklyn Union Gas Company d/b/a National Grid NY

KEDNY KEDLI Case 23-G-0225/0226 Data Requests

Request for Information

FROM: Kate Overacker

TO: National Grid

SUBJECT: Green Button Connect Program

Request:

In all interrogatories, all requests for workpapers or supporting calculations shall be construed as requesting any Word, Excel or other computer spreadsheet models in original electronic format with all formulae intact and unlocked.

Referring to pp. 107 - 108 of the Customer Service Panel's initial testimony, the panel states that the Companies propose to implement the Green Button Connect interface for the Companies' gas customers and state that an identical program is currently deployed to Niagara Mohawk customers.

1. Provide any analysis, supporting documentation, workpapers, and research reports supporting the extension of Green Button Connect to the Companies' gas customers.

2. Provide data from Niagara Mohawk regarding customer usage of Green Button Connect including usage reports and any customer feedback.

Response:

1. Initially efforts to implement Green Button Connect My Data ("Green Button Connect") focused on combination electric and gas utilities, as reflected in the Public Service Commission's (the "Commission") "Order Adopting Accelerated Energy Efficiency Targets" in Case 18-M-0084 (issued and effective December 13, 2018), the Joint Utilities' Status Report on Green Button Connect in Cases 18-M-0084 and 98-M-1343 (filed October 16, 2019), and the electric Distributed System Implementation Plans ("DSIPs") filed in Cases 14-M-0101 and 16-M-0411. As combination utilities implemented Green Button Connect, including the Companies' Upstate New York affiliate Niagara Mohawk Power Corporation d/b/a National Grid ("Niagara Mohawk"), Department of Public Service Staff ("Staff") encouraged the Companies to adopt the platform for their gas-only customers, noting that the Commission's prior orders do not limit implementation to combination utilities. With adoption of the Green Button

Connect functionality, customers will be able to share their energy consumption data with authorized third parties. The ability to share such data is expected to provide valuable insights and animate the market for innovative energy-saving solutions that can benefit customers in line with the State's ambitious clean energy goals.

2. Niagara Mohawk customers are able to share data with 43 third parties who have registered as part of the Company's Green Button Connect program. Currently, 39 Niagara Mohawk customers are sharing data using this functionality. Based on feedback from third parties, Niagara Mohawk has improved the registration process enabling completion of the required Data Security Agreement and Self-Attestation forms online. Niagara Mohawk is also working to expand Green Button Connect capabilities to certain large commercial customers who were not part of the company's planned advanced metering infrastructure deployment program.

KEDNY KEDLI Case No. 23-G-0225/0226 Data Requests

Request for Information

FROM: Kyle LaBelle

TO: National Grid

SUBJECT: Customer Service Metrics

Request:

In all interrogatories, all requests for workpapers or supporting calculations shall be construed as requesting any Word, Excel or other computer spreadsheet models in original electronic format with all formulae intact and unlocked.

1. For each of the metrics listed below, provide a detailed description of how the monthly and annual totals are calculated. Include a description of and rationale for any exceptions or exclusions of data.

    a. Public Service Commission Complaint Rate;

    b. Residential Customer Transaction Satisfaction;

    c. Percentage of Customer Calls Answered in 30 Seconds; and

    d. Adjusted Customer Bills.

Response:

1. Please see Attachment 1 for National Grid's "Customer Service Quality and Performance Indicator Reports" procedure document, which contains detailed descriptions of how the monthly and annual totals are calculated for KEDNY and KEDLI's Public Service Commission Complaint Rate, Residential Customer Transaction Satisfaction, Percentage of Customer Calls Answered in 30 Seconds, and Adjusted Customer Bills service quality metrics. The procedure also lists the data excluded from the metrics.

***{END OF DOCUMENT}*..... 61**

1. Purpose

This document describes the procedure for calculating and reporting Niagara Mohawk Power Corporation d/b/a National Grid ("NMPC"), The Brooklyn Union Gas Company d/b/a National Grid NY ("KEDNY"), and KeySpan Gas East Corporation d/b/a National Grid's ("KEDLI")

- Annual customer Service Quality ("SQ") metrics; and
- Monthly Performance Indicator ("PI") metrics.

Included for each metric are its: definition, data inputs, calculation, exclusions (if applicable), process, responsible department, reporting process, and independent review process.

While some of the SQ and PI metrics overlap, it is important to note that the calculation of the metrics **may differ**, as described below. The SQ metrics were established as part of rate plans and contain negative revenue adjustments ("NRAs") for failing to meet established targets. The calculation of these metrics is governed by the historic methodology used to establish the target for the metrics. In contrast, the monthly PI metrics do not contain negative revenue adjustments. For calendar years 2022-2024, NMPC's annual reports will reflect the migration from the prior SQ metrics to new customer service PI titles, metrics and NRAs. The PI metrics are calculated pursuant to the Commission's *Order Adopting Revisions to Customer Service Reporting Metrics* issued and effective August 4, 2017 in Case 15-M-0566 (the "PI Order") (*see* pages 5-7 of the PI Order) (stating that, as a product of utility rate cases, SQ metrics are governed by the definitions adopted in utility rate plans).

Auditable data must be retained for the current calendar year and the prior two calendar years per pages 7-8 of the PI Order.

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

It is recognized that COVID-19 pandemic could impact the Companies' performance under certain metrics. To that end, the Companies' current rate plans allow the Companies to petition the Commission to seek relief from a negative revenue adjustment to the extent it can demonstrate performance impacts attributable to the COVID-19 pandemic. If the Commission takes action regarding service quality metrics in the Generic COVID Case, Case 20-M-0266 – *Proceeding on Motion of the Commission Regarding the Effects of COVID-19 on Utility Service*, the Commission's determination in that proceeding shall control.

2. Source of SQ and PI Metrics

2.1. NMPC SQ Metrics

a. Cases 20-E-0380 and 20-G-0381– Appendix 15 of the Joint Proposal adopted by the Commission in its *Order Adopting Terms of Joint Proposal and Establishing Electric and Gas Rate Plans* (issued and effective January 20, 2022) ("NMPC JP") (*see* Appendix 1 to this document).

2.2. KEDNY SQ Metrics

a. Case 19-G-0309– Section IV.9 of the Joint Proposal (at pgs.101-106) adopted by the Commission in its *Order Adopting Terms of Joint Proposal and Establishing Gas Rate Plans* (issued and effective August 12, 2022) ("KEDNY/KEDLI JP") (*see* Appendix 3 to this document).

2.3. KEDLI SQ Metrics

a. Case 19-G-0310 – Section IV.9 of the Joint Proposal (at pgs. 101-106) adopted by the Commission in its *Order Adopting Terms of Joint Proposal and Establishing Gas Rate Plans* (issued and effective August 12, 2022) ("KEDNY/KEDLI JP") (*see* Appendix 2 to this document).

2.4. Customer Service PI Metrics

a. Case 15-M-0566 – The PI Order (*see* Appendix 5 to this document).

3. NMPC SQ Metrics for Electric and Gas Customer Service

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

3.1. There are four SQ metrics for NMPC:

a. PSC Complaint Rate
b. Residential Customer Transaction Satisfaction Survey
c. Small to Medium C&I Customer Transaction Satisfaction Survey
d. Percentage of Calls Answered by a Representative Within 30 Seconds

3.2. Missed Appointments Data for NMPC

4. NMPC – PSC Complaint Rate

4.1. Definition

a. The PSC Complaint Rate is the annual average monthly rate of complaints per 100,000 customers.

b. Per the NMPC JP, a complaint is initiated with a dispute being filed by, or on the behalf of, a consumer with the Staff of the DPS Office of Consumer Services. The issue of concern forming the basis for the complaint must be one within the utility's responsibility and control, including an action, practice, or conduct of the utility or its employees. Matters within the responsibility or control of alternative service provider(s) are not counted.

4.2. Data Inputs

a. There are two inputs: (i) the number of complaints and (ii) the customer total.

Complaints

b. Only "charged" complaints are included in the metric.

c. A complaint by a customer to the PSC is initially registered by the PSC in the Quick Resolution System ("QRS"). A QRS complaint is not included in the SQ metric. If NMPC cannot resolve a QRS complaint with a customer, it is escalated to a "charged" complaint in the Standard Resolution System ("SRS"). At this stage, the complaint is included in the metric.

d. A complaint will be considered "charged" when a customer, after first having contacted NMPC to express dissatisfaction with an action, practice, or conduct of

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

NMPC, and having provided NMPC a reasonable opportunity to address the matter, contacts the Commission to express dissatisfaction with such action, practice, or conduct. A complaint will not be charged if the contact with the Commission is for an opinion or inquiry.

e. The Company enters all SRS cases into its Salesforce C3M system and runs internal reports weekly.

f. DPS Staff enters all SRS cases into the PSC Portal.

Customer Total

g. The total number of customers should be the unduplicated number of customer accounts as of December 31st of the previous calendar year.

h. A customer receiving both electric and gas service is considered one customer.

i. The number of customers shall correspond to the number of accounts (*i.e.,* a person or entity with two or more accounts shall be counted as two or more customers).

j. A customer is defined as a single active account recorded in the billing system regardless of the number of meters.

k. Both residential and non-residential end-use customer accounts are included in the calculation.

l. A customer directly metered and billed on a utility's redistribution or submetered service class is counted as a single customer. Individual sub meters and master metered occupants provided service through a direct metered utility customer are not counted separately or included in the utility's customer total.

4.3. How calculated

$$\frac{\text{Monthly Escalated Complaint Total}}{\text{Customer Total}} \text{ X } 100{,}000$$

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

a. Complaints are measured monthly and the metric is based on the average of the 12 monthly scores.

PSC Complaint Rate per 100,000 Customers	Basis Points at Risk CY 2022	Basis Points at Risk CY 2023 and 2024
≤ 1.0	0 BP	0 BP
> 1.0	2 BP	3 BP
≥ 1.2	5 BP	6 BP
≥ 1.4	10 BP	12 BP

b. The PSC Complaint Rate will be reported at a one-tenth digit of accuracy.

4.4. Exclusions

a. Matters within the responsibility or control of an alternative service provider(s) shall not be counted as a PSC Complaint against NMPC under this measure.

4.5. Process

a. A customer calls the PSC with a complaint.

b. The PSC initiates a complaint record in the PSC Portal and emails the complaint to the Company.

c. The Lead Supervisor, Office of the President, reviews the complaint, uploads the complaint into the Salesforce C3M System, and assigns it to a representative to handle.

d. A Customer Represenative or Lead Supervisor, Office of the President handles the complaint to resolution with the customer, working with other Company organizations, as appropriate. This individual records progress in the Salesforce C3M System and submits the results to the PSC.

e. The PSC reviews the response from the Company and closes the complaint case, if satisfied.

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

f. If warranted, the Lead Supervisor, Office of the President, prepares a petition to the PSC for a change in the status of a charged complaint.

g. Monthly, the total number of SRS cases entered into the Salesforce C3M System is tallied and compared against the total number of SRS cases entered into the PSC Portal by the Lead Supervisor, Office of the President.

h. By the first week of January, the C&I Credit and Collections Manager provides the customer count as of 12/31 to the DPS Staff Utility Consumer Assistance Specalist II, Office of Consumer Services, for use in the upcoming year's PSC Complaint Rate metric.

i. Lead Analyst extracts the complaint rate for the month. The Manager, Office of the President provides the complaint rate for the month to Revenue Requirements for insertion in the annual SQ report.

4.6. Department Responsible

Office of the President

a. Manager, Office of the President

b. Lead Analyst, Office of the President

c. Lead Supervisor, Office of the President

5. NMPC – Residential Customer Satisfaction Survey

5.1. Definition

a. A measure of the quality of Company services and customer relations.

5.2. Data Inputs

a. The survey populations include all residential customers of the Company in that month that contacted the Call Center and had any one of the following transactions with the Company: Connect, Disconnect, Electric Service Orders/Gas Service Orders, Service Orders, Budget, High Bill, Collections, or Direct Debit.

b. NMPC will seek to perform a minimum of 600 surveys each month.

5.3. How Calculated

a. The Residential Transaction Satisfaction Index is calculated from monthly telephone survey results of a sample of residential customer transactions with the Company occurring in each month of the calendar year.

b. Question No. 28 - "Overall, on a scale from 1 to 10, where 1 means dissatisfied and 10 means satisfied, how satisfied are you with the service provided by National Grid?" is used to measure the Company's performance under this measure. Satisfaction is measured by a score of 8 or higher on the question.

Residential Customer Satisfaction Survey Interval	Basis Points at Risk CY 2022	Basis Points at Risk CY 2023 and 2024
≥ 82.0%	0 BP	0 BP
< 82.0%	2 BP	3 BP
≤ 81.0%	5 BP	6 BP
≤ 79.9%	10 BP	12 BP

c. Satisfaction levels are measured monthly and the metric is based on the average of the 12 monthly scores.

5.4. Exclusions

a. If a respondent does not answer Question No. 28, the response will not be considered in the calculation of the score.

b. Customers on the "do not survey list" are excluded.

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

5.5. Process

a. Each month, Analyst, Billing Operations, oversees an automated process that involves the download of records for all survey-qualified customers from the customer system, after which the file is sent to the Market Intelligence teams, who then transmits them in electronic format to the Company's survey vendor.

b. The survey vendor processes the files and then uploads the customer data files to its Computer-Aided Telephone Interviewing ("CAITI") system.

c. The survey vendor randomly draws phone numbers from the file and conducts the telephone surveys.

d. The survey vendor consolidates the survey data and sends it back to the Market Intelligence team.

e. The survey vendor loads the survey response data file into its Statistical Package for the Social Sciences ("SPSS"), tabulates the results, and transmits the data file, PPT file, and Excel file containing the scores to the Market Intelligence team.

f. The Market Intelligence team conducts data quality checks by running their own tabulations on the SPSS file and compares the results against the tabulated (PPT) data sent by the survey vendor. The output of the data quality checks (and corresponding raw regulatory question data) are saved monthly in an excel document and saved on the CSPI Sharepoint Site for Backup Data.

g. The Market Intelligence team then publishes the score each month to Revenue Requirements for insertion in the annual SQ reports.

5.6. Department Responsible

a. Market Intelligence

6. NMPC – Small to Medium Comercial & Industrial (C&I) Customer Satisfaction Survey

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

6.1. Definition

a. A measure of the quality of Company services and customer relations.

6.2. Data Inputs

a. The survey population includes all SC-2 customers of the Company in that month that contacted the Call Center and had any one of the following transactions with the Company: Connect, Disconnect, Electric Service Orders/Gas Service Orders, Service Orders, Budget, High Bill, Collections, and Direct Debit.

b. NMPC will seek to perform a minimum of 120 surveys each month.

6.3. How calculated

a. The Small/Medium C&I Transaction Satisfaction Index is calculated from monthly telephone survey results of a sample of SC-2 customer transactions with the Company occurring in each month of the calendar year.

b. Question No. 28 - "Overall, on a scale from 1 to 10, where 1 means dissatisfied and 10 means satisfied, how satisfied are you with the service provided by National Grid?" is used to measure the Company's performance under this measure. Satisfaction is measured by a score of 8 or higher on the question.

Small/Medium C&I Customer Satisfaction Survey Interval	Basis Points at Risk CY 2022	Basis Points at Risk CY 2023 and 2024
≥ 78.0%	0 BP	0 BP
< 78.0%	2 BP	3 BP
≤ 75.5%	5 BP	6 BP
≤ 73.0%	10 BP	12 BP

c. Satisfaction levels are measured monthly and the metric is based on the average of all scores collected across the 12 month periods.

6.4. Exclusions

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

a. If a respondent does not answer Question No. 28, the response will not be considered in the calculation of the score.

b. Customers on the “do not survey list” are excluded.

6.5. Process

a. Each month, an Analyst, Billing Operations, oversees an automated process that involves the download of records for all survey-qualified customers from the customer system, after which the file is sent to the Market Intelligence team, who then transmits them in electronic format to the Company’s survey vendor.

b. The survey vendor processes the records and then uploads the customer data files to its CAITI system.

c. The survey vendor randomly draws phone numbers from the file and conducts the telephone surveys.

d. The survey vendor consolidates the survey data and sends it back to the Market Intelligence team.

e. The Company’s survey vendor loads the survey response data file into its SPSS, tabulates the results, and transmits the data file, PPT file, and Excel file containing the scores to the Market Intelligence team.

f. The Market Intelligence team conducts data quality checks by running their own tabulations on the SPSS file and compares the results against the tabulated (PPT) data sent by the survey vendor. The output of the data quality checks (and corresponding raw regulatory question data) are saved monthly in an excel document and saved on the CSPI Sharepoint Site for Backup Data.

g. The Market Intelligence team then publishes the score each month to Revenue Requirements for insertion in the annual SQ reports.

6.6. Business Unit Responsible

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

a. Market Intelligence

7. NMPC – Percentage of Calls Answered by a Representative in 30 seconds

7.1. Definition

a. Per the NMPC JP, this metric measures the percentage of all inbound Customer Service and Collections calls to Niagara Mohawk or its agents, regardless of location, that are answered within 30 seconds.

7.2. Data Inputs

a. The following Company systems are used as data sources: Cisco Unified Intelligence Center (CUIC), Integrated Voice Response ("IVR"), internal sources, 3rd party outage system, and external sources.

b. All calls received 24/7 are included in the metric.

7.3. How calculated

a. Annual performance is based on 12 months' data. For the year, the measure is the number of inbound Customer Service and Collections calls answered by a representative within 30 seconds as a percentage of the total calls answered during the year (note that while NMPC's metric is based on year-end data, KEDNY and KEDLI's metric is based on the average of the 12 months' scores).

(*Total calls answered within 30 seconds by a representative (internal and vendor) / (Number of total calls (both internal and vendor) requesting a representative – all calls abandoned) x 100*

% Calls Answered by a Representative Within 30 Seconds	Basis Points at Risk CY 2022	Basis Points at Risk CY 2023 and 2024
≥ 79.2%	0 BP	0 BP
< 79.2%	2 BP	3 BP
≤ 77.0%	5 BP	6 BP
<74.9%	10 BP	12 BP

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

7.4. Exclusions

a. The metric excludes calls answered by any current or future IVR applications such as Niagara Mohawk's Customer Connection, icCallMe or OnCall applications.

b. Abandoned calls have historically been excluded from the metric.

7.5. Process

a. Customer calls are recorded and time stamped as they are received by the call center. Calls are initially routed to the IVR for self-service.

b. Within the IVR, customers can select to speak to a call center representative. When this selection is made, the call is recorded as a call requesting a call center representative. The call is placed in the queue and a time counter begins within the switch to measure the waiting time until the call center representative answers the call. The call leaves the queue and the time counter stops when the call is transferred to an available call center representative.

c. Raw data with call statistics (*e.g.,* Offered calls, Automatic Call Distribution ("ACD"), Calls Answered in 30 Seconds, and Service Level) are maintained in the IVR and CUIC and Calabrio call management systems.

d. The Service Level (i.e., the performance level) is calculated as follows:

(Total answered within 30 seconds / ACD) x 100

e. The team has a daily compiled Power BI Regulatory dashboard that tracks the metrics performance.

f. Monthly metrics are prepared in the related PSC file which also contains the required calculations, up on completion it is compared to the Regulatory dashboard and raw data sources for errors, a final review will then be requested.

g. The reviewer will cross-check the metrics for any anomalies in comparison to the expected results, and checked-marked for approval.

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

h. Once reviewers check-mark is completed the metric is then uploaded to the Revenue Requirements site to be include in the annual Service Quality report; along with the monthly back-up source file.

7.6. Business Unit Responsible

a. Process and Performance Reporting

8. NMPC Annual Reporting for Missed Appointments

As per the NMPC rate case order issued on January 20, 2022, Niagara Mohawk's CSPI will include the numbers and total dollars paid to customers for missed appointments. On an annual basis, the NY Revenue Requirements group sends a request to AMO provide the monthly data for the number and total dollar amounts paid to customers for missed appointments for the CY. AMO coordinates with Dispatch to complete the request.

8.1. Data Source

a. Data source comes directly from the monthly data gathered for the Appointments Kept 21.3 process for NMPC steps a through c.

8.2. Process

a. Dispatch Supervisor runs a query of sharepoint of the missed appointments for UNY where the credit warranted flag is true for the prior calendar year.
b. Dispatch Supervisors exports the query to excel and reviews it for accuracy and then sends it to the AMO Analyst.
c. AMO Analyst modifies the missed appointment excel file to identify the true credit warranted flag and add the $30 credit and provide the total volume and total credits.
    i. Adds column A and labels it Credit Required
    ii. Adds formula =IF(OR([@[Credit Warranted]] = TRUE, [@[Credit Warranted]] = "Yes"), 30, 0) to the rows under column A
    iii. Adds the Total Credit Amount and Total Credits Applied at the bottom of the spreadsheet. The sum formula is used for the volume and the total credits are manually added by multiplying the total volume by the $30 credit.
d. AMO Analyst sends the completed report back to NY Revenue Requirements and puts Dispatch on copy.
e. Dispatch Manager and AMO Manager has retained the Report Owner/Reviewer roles and has delegated Report Preparation roles to a member of their team (listed below)
    i. UNY:
        a) Report Owners / Reviewers: Manager, Dispatch and Analyst, AMO
        b) Report Preparers: Lead Supervisor, Dispatch and Analyst, AMO

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

ii. Role Distinctions:
   a) Report Owners / Reviewers – Responsible for the timely and accurate update of Missed Appointments Annual Reporting. The Owner / Reviewer will make all decisions related to the collection, storage and compilation of data required to produce the report
   b) Report Preparer – Responsible for the collection, storage and compilation and accuracy of data required to produce the Missed Appointment annual report for UNY.

iii. Review Process:
   a) Upon completion of the annual missed appointment report preparation, the report owners validate the region is UNY, credit warranted flag is true, all months in the calendar year are accounted, volumes look accurate, and the credit amount is $30.

9. NMPC SQ Report

9.1. Annual Report

a. Niagara Mohawk is required to submit annual performance results, together with supporting data and reports, to the Secretary within three months after the conclusion of each full calendar year. For calendar years 2022-2024, the annual reports will reflect the migration from the prior Service Quality Assurance Program metrics to the new customer service PI titles and metrics. The annual customer service PI reports for calendar years 2022-2024 will reflect the change from fixed dollar negative revenue adjustments to equivalent basis points of 10 basis points per metric for calendar 2022, and 12 basis points per metric for calendar years 2023-2024. The NMPC annual customer service PI reports will be filed in both this rate case and Case 15-M-0566.

b. The report is to include: a description of the service quality measures, the method for calculating performance, the results for the period, supporting calculations of annual results in spreadsheet format, and a narrative overall assessment of customer service performance during that calendar year. NMPC's annual customer service PI reports will include the number and total dollar amounts paid to customers for missed appointments. The annual customer service PI report will include the dollar value of a combined basis point for the electric and gas businesses for the applicable calendar year.

c. A sample annual report is included in Appendix 3 to this manual.

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

d. If NMPC believes in any year that its inability to meet any of the established SQ targets was attributable to *force majeure* circumstances (causes that are outside the control of NMPC and could not be avoided with the exercise of due care), it may petition the Commission for relief from any associated negative revenue adjustment.

9.2. Process for Filing Annual Report and Independent Review

a. Annual Report – By the first week of March, Revenue Requirements contacts the responsible Business Unit to obtain the year-end data and annual narrative for each of the SQ metrics.

b. The responsible Business Unit compiles the data and annual narrative for each of the SQ metrics (as described above) and reviews the data and narrative for accuracy and completeness using the Procedure Document and applicable metric calculation instructions saved to the SharePoint site as references.

c. By the third week of March, the responsible Business Unit provides the data and annual narrative to Revenue Requirements.

d. Revenue Requirements prepares the annual SQ report and reviews same for accuracy and completeness using the Procedure Document and applicable metric calculation instructions saved to the SharePoint site as references.

e. Revenue Requirements sends the completed annual SQ report to the Business Units to review.

f. The Business Units review the completed annual SQ report and provide their sign-off to Revenue Requirements for the report to be filed.

g. Once the Business Units' sign-off is obtained, Revenue Requirements sends the following e-mail, with the highlighted text filled in, to the responsible Business Unit metric contacts and Director of NY Legal:

a. "I have completed the review of the Annual *yyyy* SQ report for NMPC. I reached out to the business leads for each metric for their data. I then checked their formulas, ensured the SQ report metrics that overlapped with the CSPI

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

metrics agreed, and compared past data with current data to determine if there was any significant differences that could indicate a potential issue."

i. *yyyy* = calendar year (ie, "2022")

b. Revenue Requirements uploads a copy of the time-stamped email to the "Revenue Requirements_Review Evidence" sub-folder (under the "Service Quality Reports – 2022" folder) on the SharePoint site.

h. Revenue Requirements sends the final annual SQ report to Legal by the beginning of the fourth week of March.

i. Legal reviews the final annual SQ report for accuracy and completeness using the Procedure Document and applicable metric calculation instructions saved to the SharePoint site as references.

j. Legal files the annual SQ report by April 1 of each year.

10. KEDNY Service Quality Metrics

10.1. PSC Complaint Rate

10.2. Residential Customer Satisfaction Survey

10.3. Telephone Answer Response within 30 Seconds

10.4. Adjusted Customer Bills

11. KEDNY – PSC Complaint Rate

11.1. Definition

a. The PSC Complaint Rate is the annual average monthly rate of complaints per 100,000 customers.

b. Per the KEDNY/KEDLI JP, a PSC complaint is initiated with a dispute being filed by, or on behalf of, a customer with the Commission. The basis of the complaint must be

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

one within KEDNY's control. Only "charged" complaints are included in the PSC Complaint Rate metric.

c. In addition, complaints brought by energy service companies ("ESCOs") on behalf of their customers over which KEDNY has control (*e.g.,* meter issues) will be included in the PSC Complaint Rate metric, provided the ESCO follows the Commission's designated complaint procedures and provides KEDNY with a reasonable opportunity to address the matter. ESCO complaints on behalf of customers over which KEDNY has no control, such as slamming, will not be included in the metric. For an ESCO to represent a customer with a complaint, the ESCO must follow the Commission's procedures and obtain specific agency agreement.

11.2. Data Inputs

Complaints

a. A complaint by a customer to the PSC is initially registered by the PSC in the QRS. A QRS complaint is not included in the SQ metric. If KEDNY cannot resolve a QRS complaint with a customer, it is escalated to a "charged" complaint in the SRS. At this stage, the complaint is included in the metric.

b. A complaint will be considered "charged" when a customer, after first having contacted KEDNY to express dissatisfaction with an action, practice, or conduct of KEDNY, and having provided KEDNY a reasonable opportunity to address the matter, contacts the Commission to express dissatisfaction with such action, practice, or conduct. A complaint will not be charged if the contact with the Commission is for an opinion or inquiry.

c. The Company enters all QRS and SRS cases into its Salesforce C3M system and runs internal reports weekly.

d. DPS Staff enters all cases into the PSC Portal.

Customer Total

e. The total number of customers should be the unduplicated number of customer accounts as of December 31st of the previous calendar year.

11.3. How Calculated

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

$$\frac{\text{Monthly Escalated Complaint Total}}{\text{Customer Total}} \text{ X } 100{,}000$$

a. Complaints are measured monthly and the metric is based on the average of the 12 monthly scores.

Complaints per 100,000 Customers	Negative Revenue Adjustment
≤ 1.0	$0
> 1.0	$4,680,000

b. The PSC Complaint Rate will be reported at a one-tenth digit of accuracy.

11.4. Exclusions

a. ESCO complaints on behalf of customers over which KEDNY has no control, such as slamming, will not be included in the metric.

11.5. Process

a. A customer calls the PSC with a complaint.

b. The PSC initiates a complaint record in the PSC Portal and emails the complaint to the Company.

c. Regulatory Inquiry Sr. Rep Post 98 or Senior Supervisor, Office of the President reviews the complaint, uploads the complaint into the Salesforce C3M System, and addresses the complaint.

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

d. Regulatory Inquiry Sr. Rep Post 98 or Senior Supervisor handles the complaint to resolution with the customer, working with other Company organizations, as appropriate. This individual records progress in the Salesforce C3M System and submits the results to the PSC.

e. Regulatory Inquiry Sr. Rep Post 98 or Senior Supervisor, Office of the President reviews the complaint case record in Salesforce C3M and submits the final case record to the PSC through the PSC Portal.

f. The PSC reviews the response from the Company and closes the complaint case, if satisfied.

g. If warranted, or Senior Supervisor or Regulatory Inquiry Sr. Rep Post 98 prepares a petition to the PSC for a change in the status of a charged complaint.

h. Monthly, the total number of SRS cases entered into the Salesforce C3M System is tallied and compared against the total number of SRS cases entered into the PSC Portal by the Lead Analyst, Office of the President.

i. By the 1st week of January, the C&I Credit and Collections Manager provides the customer count as of 12/31 to Utility Consumer Assistance Specialist III, Office of Consumer Services, for use in the upcoming year's PSC Complaint Rate metric.

j. Lead Analyst extracts the complaint rate for the month. The Manager, Office of the President provides the complaint rate for the month to Revenue Requirements for insertion in the annual SQ report.

11.6. Business Unit Responsible

Office of the President

1) Manager, Office of the President

2) Lead Analyst, Office of the President

3) Senior Supervisor, Office of the President

12. KEDNY – Percentage of Adjusted Bills

PRINTED COPIES ARE NOT DOCUMENT CONTROLLED. © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED
FOR THE LATEST AUTHORIZED VERSION PLEASE REFER TO THE HYPERLINK

12.1. Definition

a. A measure of the proportion of customer bills that require later adjustment as a result of errors by KEDNY, expressed as a percentage of total customer bills.

12.2. Data Inputs

a. Total number of bills – all bills rendered to customers.

b. Total number of bills adjusted – all rebills, inclusive of non-Company error rebills.

c. Total non-Company error rebills – non-Company error rebills that are excluded from the metric (discussed below).

d. Net adjusted bills – total bills minus non-Company error rebills.

12.3. How Calculated

a. The metric is measured monthly and is based on the average of the 12 monthly scores.

Adjusted Customer Bills	Negative Revenue Adjustment
0.62% or less	$0
0.63% to 0.72%	$585,000
0.73% to 0.82%	$877,500
0.83% and over	$1,170,000

12.4. Exclusions

a. Per the KEDNY/KEDLI JP, the following are not adjusted bills for purposes of the SQ metric: (i) an estimated bill replaced by a bill based on an actual reading; (ii) a customer reading replaced with an actual or estimated reading; (iii) a change in a customer bill because of switching to or from budget billing; or (iv) changes to correct for the responsible billing party (*e.g.,* where bills have been rendered to a prior

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

resident, and bills are re-issued to the current resident). However, KEDNY only excludes from the metric (i) an estimated bill replaced by a bill based on an actual reading. This is due to system limitations.

b. Final bills that are re-billed to a different date are excluded from the metric as well.

12.5. Process

a. To obtain the metric components from the CRIS system, Analyst, Billing Operations performs the following:

a) Total bills rendered from monthly query "Update_Bills_Rendered_Detail" (all bills rendered from the GAS_BILL table for the calendar month except those where CDE_TYPE_BILL <> 'UAG' - unaccounted for gas).

b) Total re-bills rendered from monthly query "Update_Bills_Rendered_Detail" (all bills rendered where CDE_TYPE_BILL in ('REB', REF') - rebill and refinal).

c) Total conditioners from monthly query "Update_Bills_Adj_Cond_Detail" which reflects "FINAL BILLS WHICH ARE REBILLED TO A DIFFERENT FINAL DATE" and "BILLS ORIGINALLY BASED ON AN ESTIMATE AND SUBSEQUENTLY REBILLED TO AN "ACTUAL" (COMPANY, CUSTOMER, MANUAL) READ."

b. Analyst, Billing Operations performs the following calculation to arrive at the monthly adjusted bill figure:

((Total re-bills rendered - Total exclusions (i.e., conditioners)) / Total bills rendered) x 100

c. Analyst, Billing Operations provides the metric result to enter in the annual SQ report.

12.6. Department Responsible

a. Billing Office Management

13. KEDNY – Percentage of Calls Answered

13.1. Definition

a. Per the KEDNY/KEDLI JP, this is a measure of the proportion of customer service calls answered by a KEDNY representative within 30 seconds, expressed as a percentage of the total calls answered.

13.2. Data Inputs

a. The following Company systems are used as data sources: CUIC, IVR, internal sources, 3rd party outage system, and external sources.

b. All calls received 24/7 are included in the metric.

13.3. How Calculated

a. The metric is measured monthly and is based on the average of the 12 monthly scores (note – the calculation is different than NMPC's calculation).

(Total calls answered within 30 seconds by a call center representative) / Number of total calls requesting a representative – all calls abandoned) x 100

% Calls Answered Within 30 Seconds	Negative Revenue Adjustment
≥ 60.6%	$0
< 60.6%	$1,170,000

13.4. Exclusions

a. Abandoned calls have historically been excluded from the metric.

13.5. Process

a. Customer calls are recorded and time stamped as they are received by the call center. Calls are initially routed to the IVR for self-service.

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

b. Within the IVR, customers can select to speak to a call center representative. When this selection is made, the call is recorded as a call requesting a call center representative. The call is placed in the queue and a time counter begins within the switch to measure the waiting time until the call center representative answers the call. The call leaves the queue and the time counter stops when the call is transferred to an available call center representative.

c. Raw data with call statistics (*e.g.,* Offered calls, Automatic Call Distribution ("ACD"), Calls Answered in 30 Seconds, and Service Level) are maintained in the IVR and the CUIC and Calabrio call management systems

d. The Service Level (*i.e.,* the performance level) is calculated as follows:

(Total answered within 30 seconds / ACD) x 100

e. The team has a daily compiled Power BI Regulatory dashboard that tracks the metrics performance.

f. Monthly metrics are prepared in the related PSC file which also contains the required calculations, up on completion it is compared to the Regulatory dashboard and raw data sources for errors, a final review will then be requested.

g. The reviewer will cross-check the metrics for any anomalies in comparison to the expected results, and checked-marked for approval.

h. Once reviewers check-mark is completed the metric is then uploaded to the Revenue Requirements site to be include in the annual Service Quality report; along with the monthly back-up source file.

14. KEDNY – Residential Customer Satisfaction Survey

14.1. Definition

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

a. Customer satisfaction is measured monthly based on the satisfaction ratings resulting from a random mail survey of residential customers who have contacted KEDNY.

14.2. Data Inputs

a. The satisfaction level is measured based on the number of customers rating KEDNY between “6” and “10” on a ten point satisfaction scale.

b. KEDNY will endeavor to receive a minimum of 100 completed surveys per month.

c. Customers calling the KEDNY call center are eligible to receive a survey if they fall into one of the following 48 contact types:

GENERAL METER READING INQUIRY

14.3. How Calculated

a. Satisfaction levels are measured monthly.

b. The metric is based on the average of the 12 monthly scores.

Residencial Customer Satisfaction Survey	Negative Revenue Adjustment
≥ 86.7%	$0
< 86.7%	$4,680,000

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

14.4. Process

a. The Market Intelligence team receives an automated download of a random sample of customers who contacted KEDNY and transmits the electronic file to the survey vendor. The Market Intelligence team sends the vendor two files each month with approximately 1,500 randomly-selected customer records each.

b. From each of the two sample files, the survey vendor randomly selects 900 customer records, conducting two mailings each month (for a total of 1,800 customers). For each mailing, the survey vendor prints and packages the survey, includes an ID number, and addresses and mails the survey to customers. A reminder postcard is also mailed to the customers.

c. The survey vendor processes completed mail surveys received and provides an electronic data file and data tables that include the results of the satisfaction question to the Market Intelligence team. The Market Intelligence team then calculates the year-to-date score by taking an average of the 12 monthly scores in the year.

d. The survey vendor consolidates the survey data and sends it back to the Market Intelligence team.

e. The Company's survey vendor loads the survey response data file into its SPSS, tabulates the results, and transmits the data file, Word file, and .ASC file containing the scores to the Market Intelligence team.

f. The Market Intelligence team conducts data quality checks by running their own tabulations on the SPSS file and compares the results against the tabulated (Word) data sent by the survey vendor. The output of the data quality checks (and corresponding raw regulatory question data) are saved monthly in an excel document and saved on the CSPI Sharepoint Site for Backup Data.

g. The Market Intelligence team then publishes the score each month to Revenue Requirements for insertion in the annual SQ report.

14.5. Department Responsible

a. Market Intelligence

15. KEDNY SQ Report

15.1. Annual Report

a. KEDNY is required to submit annual performance reports to the Secretary to the Commission within three months after the conclusion of each full calendar year.

b. The annual performance report is to include a description of the service quality measures, the method for calculating performance, the results for the period, supporting calculations of annual results in spreadsheet format, and a narrative overall assessment of customer service performance during the calendar year.

c. If KEDNY believes in any year that its inability to meet any of the established SQ targets was attributable to *force majeure* circumstances (causes that are outside the control of KEDNY and could not be avoided with the exercise of due care), it may petition the Commission for relief from any associated negative revenue adjustment.

15.2. Process for Filing Annual Report and Independent Review

a. Annual Report – By the first week of March, Revenue Requirements contacts the responsible Business Unit to obtain the year-end data and annual narrative for each of the SQ metrics.

b. The responsible Business Unit compiles the data and annual narrative for each of the SQ metrics (as described above) and reviews the data and narrative for accuracy and completeness using the Procedure Document and applicable metric calculation instructions saved to the SharePoint site as references.

c. By the third week of March, the responsible Business Unit provides the data and annual narrative to Revenue Requirements.

d. Revenue Requirements prepares the annual SQ report and reviews same for accuracy and completeness using the Procedure Document and applicable metric calculation instructions saved to the SharePoint site as references.

e. Revenue Requirements sends the completed annual SQ report to the Business Units to review.

f. The Business Units review the completed annual SQ report and provide their sign-off to Revenue Requirements for the report to be filed.

g. Once the Business Units' sign-off is obtained, Revenue Requirements sends the following e-mail, with the highlighted text filled in, to the responsible Business Unit metric contacts and Director of NY Legal:

   a. "I have completed the review of the Annual *yyyy* SQ report for KEDNY. I reached out to the business leads for each metric for their data. I then checked their formulas, ensured the SQ report metrics that overlapped with the CSPI metrics agreed, and compared past data with current data to determine if there was any significant differences that could indicate a potential issue."
      i. *yyyy* = calendar year (ie, "2022")

   b. Revenue Requirements uploads a copy of the time-stamped email to the "Revenue Requirements_Review Evidence" sub-folder (under the "Service Quality Reports – 2022" folder) on the SharePoint site.

h. Revenue Requirements sends the final annual SQ report to Legal by the beginning of the fourth week of March.

i. Legal reviews the final annual SQ report for accuracy and completeness using the Procedure Document and applicable metric calculation instructions saved to the SharePoint site as references.

j. Legal files the annual SQ report by April 1 of each year.

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

16. KEDLI Service Quality Program Metrics

16.1. PSC Compliant Rate

16.2. Residential Customer Satisfaction Survey

16.3. Adjusted Customer Bills

16.4. Telephone Answer Response with 30 Seconds

17. KEDLI – PSC Complaint Rate

17.1. Definition

a. The PSC Complaint Rate is the annual average monthly rate of complaints per 100,000 customers.

b. Per the KEDNY/KEDLI JP, a PSC complaint is initiated with a dispute being filed by, or on behalf of, a customer with the Commission. The basis of the complaint must be one within KEDLI's control. Only "charged" complaints are included in the PSC Complaint Rate metric.

c. In addition, complaints brought by energy service companies ("ESCOs") on behalf of their customers over which KEDLI has control (*e.g.,* meter issues) will be included in the PSC Complaint Rate metric, provided the ESCO follows the Commission's designated complaint procedures and provides KEDLI with a reasonable opportunity to address the matter. ESCO complaints on behalf of customers over which KEDLI has no control, such as slamming, will not be included in the metric. For an ESCO to represent a customer with a complaint, the ESCO must follow the Commission's procedures and obtain specific agency agreement.

17.2. Data Inputs

<u>Complaints</u>

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

a. A complaint by a customer to the PSC is initially registered by the PSC in the QRS. A QRS complaint is not included in the SQ metric. If KEDLI cannot resolve a QRS complaint with a customer, it is escalated to a "charged" complaint in the SRS. At this stage, the complaint is included in the metric.

b. A complaint will be considered "charged" when a customer, after first having contacted KEDLI to express dissatisfaction with an action, practice, or conduct of KEDLI, and having provided KEDLI a reasonable opportunity to address the matter, contacts the Commission to express dissatisfaction with such action, practice, or conduct. A complaint will not be charged if the contact with the Commission is for an opinion or inquiry.

c. The Company enters all QRS and SRS cases into its Salesforce C3M system and runs internal reports weekly.

d. DPS Staff enters all SRS cases into the PSC Portal.

Customer Total

e. The total number of customers should be the unduplicated number of customer accounts as of December 31st of the previous calendar year.

f. The number of customers shall correspond to the number of accounts (*i.e.,* a person or entity with two or more accounts shall be counted as two or more customers).

g. A customer is defined as a single active account recorded in the billing system regardless of the number of meters.

e. Both residential and non-residential end-use customer accounts are included in the calculation.

f. A customer directly metered and billed on a utility's redistribution or submetered service class is counted as a single customer. Individual sub meters and master metered occupants provided service through a direct metered utility customer are not counted separately or included in the utility's customer total.

17.3. How Calculated

$$\frac{\text{Monthly Escalated Complaint Total}}{\text{Customer Total}} \text{ X } 100{,}000$$

a. Complaints are measured monthly and the metric is based on the average of the 12 monthly scores.

Complaints per 100,000 Customers	Negative Revenue Adjustment
≤ 1.0	$0
> 1.0	$3,960,000

b. The PSC Complaint Rate will be reported at a one-tenth digit of accuracy.

17.4. Exclusions

a. ESCO complaints on behalf of customers over which KEDLI has no control, such as slamming, will not be included in the metric.

17.5. Process

a. A customer calls the PSC with a complaint.

b. The PSC initiates a complaint record in the PSC Portal and emails the complaint to the Company.

c. Customer Rep 6 or Senior Supervisor, Office of the President reviews the complaint, uploads the complaint into the Salesforce C3M System, and addresses the complaint.

d. Customer Rep 6 or Senior Supervisor handles the complaint to resolution with the customer, working with other Company organizations, as appropriate. This individual records progress in the Salesforce C3M System and submits the results to the PSC.

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

e. Customer Rep 6 or Senior Supervisor, Office of the President reviews the complaint case record in Salesforce C3M and submits the final case record to the PSC through the PSC Portal.

f. The PSC reviews the response from the Company and closes the complaint case, if satisfied.

g. If warranted, Senior Supervisor, Office of the President or Customer Rep 6 prepares a petition to the PSC for a change in the status of a charged complaint.

h. Monthly, the total number of SRS cases entered into the Salesforce C3M System is tallied and compared against the total number of SRS cases entered into the PSC Portal by Lead Analyst.

i. By the 1st week of January, the C&I Credit and Collections Manager provides the customer count as of 12/31 to Utility Consumer Assistance Specialist III, Office of Consumer Services, for use in the upcoming year's PSC Complaint Rate metric.

j. Lead Analyst extracts the complaint rate for the month. The Manager, Office of the President provides the complaint rate for the month to Revenue Requirements for insertion in the annual SQ report.

17.6. Department Responsible

a. Office of the President

a. Manager, Office of the President

b. Lead Analyst, Office of the President

c. Senior Supervisor, Office of the President

18. KEDLI – Residential Customer Satisfaction Survey

18.1. Definition

a. The metric is measured monthly based on the satisfaction ratings resulting from a random telephone survey of residential customers who have contacted KEDLI.

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

18.2. Data Inputs

a. The satisfaction level is measured based on the number of customers rating KEDLI between “6” and “10” on a ten point satisfaction scale.

b. KEDLI will endeavor to receive a minimum of 100 completed surveys per month.

c. Residential customers who call the KEDLI Call Center in a given month have the opportunity to be randomly selected for the survey based on the following criteria:

a. Had any one of the following 17 transaction types with the Company: Web Question, Tree Trimming, Transfer, Start/Stop Service, Special Needs, Outage, New Business, Misc, Meter Reading, Field Service Order, Escalation, Emergency, Collection Agreements, CI, Billing Adjustment, or Balanced_Bill_Payment, or Account Maintenance.

b. The customer did not appear in the random sample in the prior six months.

18.3. How calculated

a. The metric is based on the average of the 12 monthly scores

Residencial Customer Satisfaction Survey	Negative Revenue Adjustment
≥ 85.1%	$0
< 85.1%	$3,960,000

.

18.4. Exclusions

a. The vendor removes anyone who was contacted in the prior two months.

b. Customers on the “Do not survey list” are excluded.

18.5. Process

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

a. Each month, Analyst, Billing Operations, oversees an automated process that downloads records for all survey-qualified customers from the customer system and then sends the file to the Market Intelligence teams, who then transmits them in electronic format to the Company's survey vendor.

b. The survey vendor processes the records and then uploads the customer data files to its CAITI system and randomizes the files.

c. The survey vendor randomly draws phone numbers from the file and conducts the telephone surveys.

d. The survey vendor consolidates the survey data, loads the data into SPSS, tabulates the results, and sends the files (data file, the PPT file, and the Excel Verbatim file) to The Market Intelligence team.

e. The Market Intelligence team conducts data quality checks by running their own tabulations on the SPSS file and compares the results against the tabulated (PPT) data sent by the survey vendor. The output of the data quality checks (and corresponding raw regulatory question data) are saved monthly in an excel document and saved on the CSPI Sharepoint Site for Backup Data.

f. The Market Intelligence team then publishes the score each month to Revenue Requirements for insertion in the annual SQ report.

18.6. Business Unit Responsible

Market Intelligence

19. KEDLI – Telephone Answer Response within 30 Seconds

19.1. Definition

a. Per the KEDNY/KEDLI JP, this is a measure of the proportion of customer service calls answered by a KEDLI representative within 30 seconds, expressed as a percentage of the total calls answered.

19.2. Data Inputs

a. The following Company systems are used as data sources: Avaya CMS, IVR, internal sources, 3rd party outage system, and external sources.

b. All calls received 24/7 are included in the metric.

19.3. How calculated

a. The metric is measured monthly and is based on the average of the 12 monthly scores (note – the calculation is different than NMPC's calculation).

(Total calls answered within 30 seconds by a call center representative / number of total calls requesting a representative – all calls abandoned) x 100

% Calls Answered Within 30 Seconds	Negative Revenue Adjustment
≥ 62.2%	$0
< 62.2%	$990,000

19.4. Exclusions

a. Abandoned calls have historically been excluded from the metric.

19.5. Process

a. Customer calls are recorded and time stamped as they are received by the call center. Calls are initially routed to the IVR for self-service.

b. Within the IVR, customers can select to speak to a call center representative. When this selection is made, the call is recorded as a call requesting a call center representative. The call is placed in the queue and a time counter begins within the switch to measure the waiting time until the call center representative answers the call. The call leaves the queue and the time counter stops when the call is transferred to an available call center representative.

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

c. Raw data with call statistics (*e.g.,* Offered calls, Automatic Call Distribution ("ACD"), Calls Answered in 30 Seconds, and Service Level) are maintained in the IVR and the CUIC and Calabrio call management systems

d. The Service Level (*i.e.,* the performance level) is calculated as follows:

(Total answered within 30 seconds / ACD) x 100

e. The team has a daily compiled Power BI Regulatory dashboard that tracks the metrics performance.

f. Monthly metrics are prepared in the related PSC file which also contains the required calculations, up on completion it is compared to the Regulatory dashboard and raw data sources for errors, a final review will then be requested.

g. The reviewer will cross-check the metrics for any anomalies in comparison to the expected results, and checked-marked for approval.

h. Once reviewers check-mark is completed the metric is then uploaded to the Revenue Requirements site to be include in the annual Service Quality report; along with the monthly back-up source file.

19.6. Business Unit Responsible

a. Process and Performance Reporting

20. KEDLI – Adjusted Customer Bills

20.1. Definition

a. A measure of the proportion of customer bills that require later adjustment as a result of errors by KEDLI, expressed as a percentage of total customer bills.

20.2. Data Inputs

a. Total number of bills – all bills rendered to customers.

b. Total number of bills adjusted – all rebills, inclusive of non-Company error rebills.

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

c. Total non-Company error rebills – non-Company error rebills that are excluded from the metric (discussed below).

d. Net adjusted bills – total bills minus non-Company error rebills.

20.3. How calculated

a. The metric is measured monthly and is based on the average of the 12 monthly scores.

Adjusted Customer Bills	Negative Revenue Adjustment
1.50% or less	$0
1.51% to 1.60%	$495,000
1.61% to 1.70%	$742,500
1.71% and over	$990,000

20.4. Exclusions

a. Per the KEDNY/KEDLI JP, the following are not adjusted bills for purposes of the Service Quality: (i) an estimated bill replaced by a bill based on an actual reading; (ii) a customer reading replaced with an actual or estimated reading; (iii) a change in a customer bill because of switching to or from budget billing; or (iv) changes to correct for the responsible billing party (*e.g.*, where bills have been rendered to a prior resident, and bills are re-issued to the current resident). However, KEDLI only excludes from the metric (i) an estimated bill replaced by a bill based on an actual reading and (iii) a change in a customer bill because of switching to or from budget billing. This is due to system limitations.

20.5. Process

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

a. To obtain the metric components from the CSS system, Analyst, Billing Operations, performs the following:

    a) CSS mainframe ad-hoc job "CG.CSS.BUSOPS.ADHOC.PROCLIB(MONTH8C)" to produce the total bill count, exclusions (i.e., conditioners) and total number of active account. The job creates the "JB108_BILL_COUNTS_ALL.csv" file. This file contains the counts of bills rendered, rebills and conditioners for KEDLI and NMPC.

b. To calculate the components to yield the metric, the Analyst, Billing Operations performs the following:

    a) Net Corrected Bills = Number of Rebills – Conditioners
    b) Conditioners is defined as Adjusted Budget Bills + Estimated Replaced by Actual
    c) Net Number of Bills is calculated as Number of bills rendered – Net Corrected Bills

c. The Analyst, Billing Operations performs the following calculation to arrive at the monthly adjusted bill figure:

    ((Total re-bills rendered - Total exclusions (i.e., conditioners)) / Total bills rendered) x 100

d. Billing Operations provides the metric result to Revenue Requirements to enter in the annual SQ report.

e. Manager of Billing Operations will review and sign off on the CSPI Worksheet.

20.6. Business Unit Responsible

a. Billing Office Management

21. KEDLI SQ Reports

21.1. Annual Report

a. KEDLI is required to submit annual performance reports to the Secretary to the Commission within three months after the conclusion of each full calendar year.

b. The annual performance report is to include a description of the service quality measures, the method for calculating performance, the results for the period, supporting calculations of annual results in spreadsheet format, and a narrative overall assessment of customer service performance during the calendar year.

c. If KEDLI believes in any year that its inability to meet any of the established SQ targets was attributable to *force majeure* circumstances (causes that are outside the control of KEDLI and could not be avoided with the exercise of due care), it may petition the Commission for relief from any associated negative revenue adjustment.

21.2. Process for Filing Annual Report and Independent Review

a. Annual Report – By the first week of March, Revenue Requirements contacts the responsible Business Unit to obtain the year-end data and annual narrative for each of the SQ metrics.

b. The responsible Business Unit compiles the data and annual narrative for each of the SQ metrics (as described above) and reviews the data and narrative for accuracy and completeness using the Procedure Document and applicable metric calculation instructions saved to the SharePoint site as references.

c. By the third week of March, the responsible Business Unit provides the data and annual narrative to Revenue Requirements.

d. Revenue Requirements prepares the annual SQ report and reviews same for accuracy and completeness using the Procedure Document and applicable metric calculation instructions saved to the SharePoint site as references.

PRINTED COPIES ARE NOT DOCUMENT CONTROLLED. © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED
FOR THE LATEST AUTHORIZED VERSION PLEASE REFER TO THE HYPERLINK

e. Revenue Requirements sends the completed annual SQ report to the Business Units to review.

f. The Business Units review the completed annual SQ report and provide their sign-off to Revenue Requirements for the report to be filed.

g. Once the Business Units' sign-off is obtained, Revenue Requirements sends the following e-mail, with the highlighted text filled in, to the responsible Business Unit metric contacts and Director of NY Legal:

a. "I have completed the review of the Annual *yyyy* SQ report for KEDLI. I reached out to the business leads for each metric for their data. I then checked their formulas, ensured the SQ report metrics that overlapped with the CSPI metrics agreed, and compared past data with current data to determine if there was any significant differences that could indicate a potential issue."
   i. *yyyy* = calendar year (ie, "2022")

b. Revenue Requirements uploads a copy of the time-stamped email to the "Revenue Requirements_Review Evidence" sub-folder (under the "Service Quality Reports – 2022" folder) on the SharePoint site.

h. Revenue Requirements sends the final annual SQ report to Legal by the beginning of the fourth week of March.

i. Legal reviews the final annual SQ report for accuracy and completeness using the Procedure Document and applicable metric calculation instructions saved to the SharePoint site as references.

j. Legal files the annual SQ report by April 1 of each year.

22. Monthly PI Metrics

22.1. Monthly PI metrics for NMPC, KEDNY, and KEDLI

a. Appointments Kept
b. Adjusted Bills
c. Telephone Answer Response

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

d. Estimated Bills (including AMI/AMR Penetration Rate)
e. Residential Customer Satisfaction Survey

22.2. Process for Completing, Independently Reviewing, and Submitting Monthly PI Report to the DPS Staff

a. The monthly PI metrics should be reported in accordance with the "Customer Service Metrics Manual" (revised February 16, 2022). A copy is attached to the PI Order (Appendix 5 to this document).

b. Per page 6 of the PI Order, any departure from the "Customer Service Metrics Manual" should be footnoted in the monthly PI report.

c. After reviewing the accuracy and completeness of the metric using the Procedure Document and applicable metric calculation instructions saved to the SharePoint site as references, the responsible Business Units enter their respective metric(s) for the prior month into the spreadsheet that is stored on the access-controlled SharePoint site by the 3rd Monday each month.

d. The responsible Business Unit also uploads the back-up data for their respective metric(s) for the prior month to the SharePoint site by the 3rd Monday each month.

e. Revenue Requirements independently reviews the monthly PI Report for mathematical accuracy and reasonableness using the Procedure Document and applicable metric calculation instructions saved to the SharePoint site as references.

f. The Revenue Requirements Analyst ("Analyst"):

    a. Verifies all PI metrics have been entered through the applicable month. For any missing PI metrics, the Analyst will check if sufficient footnotes explaining the missing metric(s) were entered.

    b. Reviews the previous month's CSPI Report to ensure that all prior month PI metrics have not been altered. For any altered PI metrics, the Analyst will check if sufficient footnotes explaining the changed metric(s) were provided.

    c. Checks the accuracy of PI metrics using the Procedure Document and applicable metric calculation instructions saved to the SharePoint site as references.

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

d. Reviews the cell formulas in Column O (titled "YTD Averages") to ensure metric averages are calculated properly and include all inputs.

e. Reviews footnotes for accuracy and updated information.

f. Compares monthly PI metrics to corresponding SQ annual report(s) to- ensure consistency.

g. Checks PI report formatting, borders, and spelling to ensure consistency.

h. Revenue Requirements sends the following e-mail, with the highlighted text filled in, to the responsible Business Unit CSPI metric contacts and Director of NY Legal:

   i. "I have completed the review of the *month yyyy* CSPI report for NMPC, KEDNY, and KEDLI. I compared the CSPI metrics for prior months to last month's filed report, and checked the formulas in the report. I have also verified that the backup data has been uploaded for each of the metrics for the current year as well as two prior years.

   ii. Revenue Requirements uploads a copy of the time-stamped email to the "Revenue Requirements_Review Evidence" sub-folder (under the "CSPI Report Back Up Data - 2022" folder) on the SharePoint site.

i. Legal reviews the monthly PI Report for accuracy and completeness using the Procedure Document and applicable metric calculation instructions saved to the SharePoint site as references.

j. Legal files the report in Case 15-M-0566 within 30 days of the close of each calendar month.

The sections that follow highlight differences between NMPC, KEDNY, and KEDLI's reporting of the PI metrics and the "Customer Service Metrics Manual," as well as include other relevant information. Differences should be footnoted in the monthly PI report.

22.3. Appointments Kept metric

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

a. Definitions:
   i. Appointment Made - A schedule meeting between the utility and the customer (or customer representative) at the customer's premises in which a date and time or time frame is agreed upon by both parties. The measure only applies to appointments where the customer or his or her representative must be present to provide access.
   ii. The utility arrives at the previously agreed upon location, date, and time window.
   iii. Appointment Missed - If the utility does not satisfy the terms of the Appointment Kept.

b. NMPC, KEDNY, and KEDLI will include the following footnotes in the monthly PI report:

   i. The metric includes appointments after normal business hours and on weekends.

      An attachment is included listing the appointments that are included in the data reported to the PSC and matching them to the Job Types in the Customer Service Manual, where applicable.

c. Data Source

   i. NMPC:
   Dispatch Supervisors will review a Customer Commitment report in Salesforce throughout the day to manage the customer appointments. This is a real-time report that shows the status of each customer appointment as well as the appointment windows. The following day the Dispatch Supervisors will review the Service Appointments report in Power BI for accuracy. This report identifies missed appointments for each NMPC electric and gas work order generated in response to a customer's request.

   ii. KEDNY:
   Microstrategy "Appointments" and "Missed Appointments" are manually-generated reports.Dispatch enters all missed appointments into the SharePoint report and reviews for reason missed.Whether customers will receive a credit will be determined based on the reason and selecting YES on the credit warranted field for customers eligible for credit. Once the reports are reviewed and reconciled by Customer Meter Services ("CMS") Dispatch, Accounts Management Organization ("AMO") issues service guarantee credits for accounts noted.

   iii. KEDLI:

PRINTED COPIES ARE NOT DOCUMENT CONTROLLED. © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED
FOR THE LATEST AUTHORIZED VERSION PLEASE REFER TO THE HYPERLINK

Dispatch runs a report in Salesforce/Power BI called the Service Appointments report. This report identifies missed appointments for each KEDLI gas work order generated in response to a customer request.

d. Process

1) NMPC:

a. Employee Information
i. Manager, Gas CMS Dispatch UNY
ii. Lead Supervisor, Gas CMS Dispatch UNY
iii. (5) Supervisors, Gas CMS Dispatch UNY
b. Dispatch Supervisors will review the Service Appointments report in Power BI for accuracy
i. For incorrect missed appointments on the Service Appointments report, the Dispatch Supervisor will enter time edits in Maximo to apply the corrections.
ii. For correct missed appointments on the Service Appointments report, the Dispatch Supervisor will enter this data into the Sharepoint Missed Appointments report and select Yes in the Credit Warranted field of this report.
c. Accounts Maintenance & Operations (AMO) will review the Sharepoint Missed Appointments report and issue the $30 service guarantee credit to the customer's bill account for all accounts that have the Credit Warranted field as Yes on this report.
d. By the 10th day of each month the Lead Supervisor and/or Dispatch Manager will run the Service Appointments report in Power BI for the previous month for accuracy.
e. After final review of this report, the following data is entered into the CSPI Report folder for the current year on the CSPI Metrics SharePoint site, 1a) Appointments Made and 1b) Appointments Kept, which then gives you 1c) Percentage of Appointments Kept using the below calculation.
f. A copy of the Summary tab of the Service Appointments report in Power BI is uploaded to the CSPI Report Back-up Data folder for current year for proof of the data entered.
g. Dispatch Manager has retained the Metric Owner / Reviewer roles and has delegated Metric Preparation roles to a member of their team (listed below)

i. UNY -

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

1.1.a.1.g.i.1. Metric Owners / Reviewer: Manager, Dispatch
1.1.a.1.g.i.2. Metric Preparer: Lead Supervisor, Dispatch

ii. Role Distinctions:

1.1.a.1.g.ii.1. Metric Owner / Reviewer – Responsible for the timely and accurate update of Appointments Kept report monthly. The Metric Owner / Reviewer will make all decisions related to the collection, storage and compilation of data required to produce the metric.

1.1.a.1.g.ii.2. Metric Preparer – Responsible for the collection, storage and compilation of data required to produce the Appointment Kept report monthly.

iii. Review Process:

1.1.a.1.g.iii.1. Monthly metrics will be prepared by the appropriate Metric Preparers
1.1.a.1.g.iii.2. Upon completion of the monthly data preparation, the Metric Owner will review
1.1.a.1.g.iii.3. Upon completion the Metric Owner will access the completed monthly report and review the file for accuracy and anomalies (the review consists of ensuring new monthly data is added and spot checking accuracy against source reports, checking for data anomalies/abnormalities)
1.1.a.1.g.iii.4. Upon completion of the review, the Metric Owner will upload the appropriate documents to the Central Repository (located here)
1.1.a.1.g.iii.5. *Note: the uploading of the monthly data by the Metric Owner / Reviewer serves as evidence that they have completed their review process

Percent of Appointments Kept will be reported as:

$$\frac{Number\ of\ Appointments\ Kept}{Number\ of\ Appointments\ Made}\ X\ 100$$

2) KEDNY:

The number of appointments created, the total appointments kept, and appointment kept percentage are compiled from the Microstrategy reports and CSS batch processing email.

Lead Supervisor has retained the Metric Owner / Reviewer roles and has delegated Metric Preparation roles to a member of their team (listed below)

a. New York City -
    i. Metric Owners / Reviewer: Lead Dispatch Supervisor,
    ii. Metric Preparer: Dispatch Supervisor
b. Role Distinctions:
    i. Metric Owner / Reviewer – Responsible for the timely and accurate update of Appointments Kept report monthly. The Metric Owner / Reviewer will make all decisions related to the collection, storage and compilation of data required to produce the metric.
    ii. Metric Preparer – Responsible for the collection, storage and compilation of data required to produce the Appointment Kept report monthly.
c. Review Process:
    i. Monthly metrics will be prepared by the appropriate Metric Preparers
    ii. Upon completion of the monthly data preparation, the Metric Owner will review
    iii. Upon completion the Metric Owner will access the completed monthly report and review the file for accuracy and anomalies (the review consists of ensuring new monthly data is added and spot checking accuracy against source reports, checking for data anomalies/abnormalities)
    iv. Upon completion of the review, the Metric Owner will upload the appropriate documents to the Central Repository (located here)
    v. *Note: the uploading of the monthly data by the Metric Owner / Reviewer serves as evidence that they have completed their review process

3) KEDLI:

a. Dispatch reviews the Salesforce/Power BI Service Appointment report for accuracy.

b. This report shows the total number of appointments created, the total number of appointments On Time, and the On Time percentage.
c. For incorrect missed appointments on the report, the Dispatch Supervisor will enter time edits in Maximo to apply the corrections.
d. For correct missed appointments, the Dispatch Supervisor send an email request to the Accounts Maintenance and Operations (AMO) department to apply the service guarantee credit to the customer's account.
e. Dispatch enters all missed Appointment in the SharePoint Report and review for reason missed, customers to receive the credit is determine based on the reason and selecting YES on the credit warranted field for customers eligible for credit.
f. Lead Supervisor LI Gas Dispatch has retained the Metric Owner / Reviewer roles and has delegated Metric Preparation roles to a member of their team (listed below)
    i. Long Island -
        1.1.a.1.f.i.1. Metric Owners / Reviewer: Lead Dispatch Supervisor,
        1.1.a.1.f.i.2. Metric Preparer: Dispatch Supervisor
g. Role Distinctions:
    i. Metric Owner / Reviewer – Responsible for the timely and accurate update of Appointments Kept report monthly. The Metric Owner / Reviewer will make all decisions related to the collection, storage and compilation of data required to produce the metric.
    ii. Metric Preparer – Responsible for the collection, storage and compilation of data required to produce the Appointment Kept report monthly.
h. Review Process:
    i. Monthly metrics will be prepared by the appropriate Metric Preparers
    ii. Upon completion of the monthly data preparation, the Metric Owner will review
    iii. Upon completion the Metric Owner will access the completed monthly report and review the file for accuracy and anomalies (the review consists of ensuring new monthly data is added and spot checking accuracy against source reports, checking for data anomalies/abnormalities)
    iv. Upon completion of the review, the Metric Owner will upload the appropriate documents to the Central Repository (located here)
    v. *Note: the uploading of the monthly data by the Metric Owner / Reviewer serves as evidence that they have completed their review process

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

For KEDLI, if a technician confirms with the dispatcher an onsite time that is in the appointment window, but the system shows it as missed, the dispatcher sends an email to alert Supervision.

1) For KEDLI, the metric includes the following job types:

KEDLI - Appointment Job Types Included in Metric - #23 Total

	Appointment Name
1	Change - Meter- Other
2	Investigate - Meter-Number
3	Inspection - Regulator
4	Investigate - Warning Tag
5	General Inspection 20 Year Inspection
6	Mandated - Change - Meter
7	Change - Meter - Service
8	Investigate - Confirm Asset
9	Turn OFF - Meter
10	Change - Meter
11	Light Up
12	Turn On - Meter
13	Turn On - Meter (Collection)
14	Fitting Work - 1
15	Install - Meter

26	Investigate – Appliance	Relight Pilot
27	Fitting Work -1; Fitting Work -2	Bottled gas; BSR; Capital Project Number; Change service valve; Extend Header; Growth Project; Install By-pass meter valve; Install service valve; MRP; Move Meter In-to-Out; Other Capital; Other Expense; Paint Header; Repair Header; Repair Regulator; Replace header; Remove service valve; SRP; Temp Repair
28	Remove – Meter	Remove Only; Removed Fire, Removed Theft. Tampering; Meter Not in Use; Removed Condemned; Removed Leak.
29	Remove – Meter	Turn Off & Remove Meter
30	Remove – Meter	Remove Meter & Retire Service
31	Turn On – Meter	General Turn On

4) This metric will be entered as 1a, 1b, and 1c in the report.

e. Department Responsible

i. Gas CMS Dispatch – NY

22.4. Adjusted Bills metric

a. NMPC, KEDNY, and KEDLI will include the following footnotes in the monthly PI report:

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED
FOR THE LATEST AUTHORIZED VERSION PLEASE REFER TO THE HYPERLINK

i. NMPC and KEDLI: The metric does not include (i) an estimated bill replaced by a bill based on an actual Company reading or (ii) a change in a customer bill because of switching to or from budget billing.

ii. KEDNY: The metric does not include (i) an estimated bill replaced by a bill based on an actual Company reading and (ii) final bills that are re-billed to a different date.

iii. NMPC, KEDNY, and KEDLI: The metric includes adjustments due to theft of service, shared meters, ESCO bill adjustments, customer reads replaced by Company actuals or estimates, and changes in billing party.

b. The SQ and PI metric for KEDNY and KEDLI should be the same.

c. Process – The data sources and process for compiling the PI metric are the same as described above for KEDNY and KEDLI's Adjusted Bills SQ metric. NMPC follows KEDLI's process.

d. This item will be entered as 2a, 2b, and 2c in the report.

e. Data Review – Adjusted Bills Metric Review Process – All Regions
Metric Owners / Reviewer: Manager, System Modeling and Change Requests
Metric Preparer: Sr. Analysts, Billing Operations

Role Distinctions:

Metric Owner / Reviewer – Responsible for the timely and accurate update of Adjusted Bills report monthly. The Metric Owner / Reviewer will make all decisions related to the collection, storage and compilation of data required to produce the metric.

Metric Preparer – Responsible for the collection, storage and compilation of data required to produce the Adjusted bill report monthly.

Review Process:

1. Monthly metrics will be prepared by the appropriate Metric Preparer
2. Upon completion of the monthly data preparation, the Metric Preparer will alert the Metric Owner via email that the monthly preparation is complete and ready for review

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

3. Upon receipt of the alert from the Metric Preparer, the Metric Owner will access the completed monthly report and review the file for accuracy and anomalies (the review consists of ensuring new monthly data is added and spot checking accuracy against source reports, checking for data anomalies/abnormalities)
4. Upon completion of the review, the Metric Owner will upload the appropriate documents to the Central Repository (located here)

   *Note: the uploading of the monthly data by the Metric Owner / Reviewer serves as evidence that they have completed their review process

f. Department Responsible

   i. Billing Operations

22.5. Telephone Answer Response metric

a. NMPC, KEDNY, and KEDLI will include the following footnotes in the monthly PI report:

   i. NMPC: Normal call center operating hours are 7:00 a.m.-7:00 p.m. Monday through Friday. Emergency calls are answered 24/7.

   ii. KEDNY: Normal call center operating hours are 8:00 a.m. - 8:00 p.m. Monday through Friday and 9:00 a.m. - 5:00 p.m. Saturday. Emergency calls are answered 24/7.

   iii. KEDLI: Normal call center operating hours are 8:00 a.m. - 8:00 p.m. Monday through Friday. Emergency calls are answered 24/7.

   iv. NMPC, KEDNY, and KEDLI: All calls received 24/7 are included in the metric.

   v. NMPC, KEDNY, and KEDLI: Calls that are abandoned in the IVR before a call center representative can answer are excluded from the calculation. The capability to differentiate between calls abandoned before or after 30 seconds have elapsed is not currently available.

b. NMPC's total year-end result for the SQ and PI metric will differ. As noted above, NMPC's SQ metric is based on total year-end performance. The PI metric total is based on a 12-month average.

c. Otherwise, the monthly results for both the SQ and PI metrics should be the same for NMPC, KEDNY, and KEDLI.

d. NMPC, KEDNY, and KEDLI have historically excluded abandoned calls for purposes of the SQ metric. The capability to differentiate between calls abandoned before or after 30 seconds have elapsed is not currently available. NMPC, KEDNY, and KEDLI will note this exclusion in the monthly PI report.

e. All calls received 24/7 are included in the metric.

f. Process – The data sources and process for compiling the PI metric are the same as described above for the SQ metric.

g. This item will be entered as 3a, 3b, 3c, and 3d in the report.

h. Department Responsible

   i. Process and Performance Reporting

22.6. Estimated Bills metric

a. NMPC will include the following footnote in the monthly PI report:

   i. NMPC: Penetration percentage includes a small number of AMI meters as part of the Clifton Park REV Demonstration Project.

b. Data Inputs

   i. Number of scheduled bills (reads)

   ii. Number of estimated bills (reads)

      a. Meter readings on inactive accounts are excluded.

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

iii. AMI/AMR Penetration Percentage

c. Data Source

i. Number of scheduled and estimated reads:

a. NMPC: Internal *US Wide Meter Reading Percentages* spreadsheet ("Meter Reads Spreadsheet") that is generated and distributed via email by Lead Analyst, CMS Massachusetts North and Central, the 2nd week of each month.

i. CSS batch processing runs job CN788WPD that integrates the meter reading file delivered from the Field Collection System ("FCS") and populates a meter reading statistics report on the CSS mainframe.

ii. This report is run every five billing cycles with an aggregate of each month generated at the close of cycle 20.

iii. Report data is then formatted into the spreadsheet.

b. KEDLI: Internal *Mtr Reading Yrly Roll Up* spreadsheet that includes all Itron Field Collection System ("FCS") reads, web-based reads, and IVR reads.

c. KEDNY: FCS Route Status report (Report 15) that is then rolled up into the NYC Meter Reading Daily Assignment Sheet.

Combined Rates			
Total Ped Meters	**Total Ped Reads**	**Read Rate**	**Est. Pct**
10,464	**3,040**	**29.05%**	**70.95%**
Total AMR Meters	**Total AMR Reads**	**Read Rate**	**Est. Pct**
1,305,526	**1,242,569**	**95.18%**	**4.82%**
Total Meters	**Total Reads**	**Read Rate**	**Est. Pct**
1,315,990	**1,245,609**	**94.65%**	**5.35%**

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

ii. AMR/AMI Penetration Percentage:

a. NMPC: Pagecenter reports CN788W#A and CN788W#B.

b. KEDLI: CSS KEDLI AMI/AMR Penetration Rate export text file that is saved to the CMS shared drive.

c. KEDNY: Weekly Field Deployment Manager ("FDM") data pulls and CRIS extracts.

i. This data is stored in an internal Access database.

AMR	Non AMR	Total	AMR Pct
1,318,635	12,574	1,331,209	99.06

d. Process

i. Estimated Reads metric

a. For NMPC, the metric is compiled from the Meter Reads Spreadsheet.

b. For KEDLI, the metric is compiled daily by Lead KEDLI Meter Service Representatives. Web-based reads are provided by Analyst, Digital Channel Performance. IVR reads are provided by Analyst, Workforce Management.

c. For KEDNY, the metric is compiled from the *NYC Meter Reading Daily Assignment* spreadsheet.

d. This item will be entered as 4a, 4b, and 4c in the report.

e. Data Review - Estimated Bill Read Metric Review Process

CMS Manager, Gas Field Operations UNY West, Lead Supervisor CMS, Gas Field Ops CMS and NYC, and Senior Supervisor CMS, Gas CMS LI have retained the Metric Owner / Reviewer roles and they have delegated Metric Preparation roles to a member of their team (listed below)

 © NATIONAL GRID USA SERVICE COMPANY 2023 – ALL RIGHTS RESERVED

Long Island -

Metric Owners / Reviewer: Senior Supervisor, CMS

Metric Preparer: Lead Meter Service Rep

NYC -

Metric Owners / Reviewer: Lead Supervisor, CMS

Metric Preparer: Senior Supervisor CMS

UNY -

Metric Owners / Reviewer: Manager, CMS

Metric Preparer: Lead Analyst, Process and Performance Reporting

Role Distinctions:

- Metric Owner / Reviewer – Responsible for the timely and accurate update of Estimated Bill Reads report monthly. The Metric Owner / Reviewer will make all decisions related to the collection, storage and compilation of data required to produce the metric.
- Metric Preparer – Responsible for the collection, storage and compilation of data required to produce the Estimated Bill Reads report monthly.

Review Process:

i. Monthly metrics will be prepared by the appropriate Metric Preparers

ii. Upon completion of the monthly data preparation, the Metric Preparer will alert the Metric Owner via email that the monthly preparation is complete and ready for review

iii. Upon receipt of the alert from the Metric Preparer, the Metric Owner will access the completed monthly report and review the file for accuracy and anomalies (the review consists of ensuring new monthly data is added and spot checking accuracy against source reports, checking for data anomalies/abnormalities and ensuring appropriate password protections are in place)

iv. Upon completion of the review, the Metric Owner will upload the appropriate documents to the Central Repository (located here)

v. *Note: the uploading of the monthly data by the Metric Owner / Reviewer serves as evidence that they have completed their review process

ii. AMI/AMR Penetration rate metric

a. For NMPC, the metric is calculated by taking the delta of the Pagecenter CN788W#A and CN788W#B reports. These reports are auto-generated at the close of cycle 20 every month.

b. For KEDLI, the metric is pulled from the CSS KEDLI AMI/AMR Penetration Rate export text file.

c. For KEDNY, the metric is pulled weekly from FDM and a CRIS extract by Supervisor, CMS NYC Meter Reading.

d. This item will be entered as 4d in the PI report. Reporting AMR/AMI penetration to the nearest whole percentile is satisfactory.

e. Department Responsible

i. CMS, New York

22.7. Residential Customer Satisfaction Survey metric

a. NMPC, KEDNY and KEDLI will include the following footnote in the monthly PI report: Metric has one month lag time.

b. Definition

(1) The PI Order directed Staff to convene a collaborative with the utilities, within 90 days of the issuance of the Order, to consider a statewide customer satisfaction survey or alternatives and to issue a proposal within six months thereafter.

(2) In the interim, the PI Order directed the utilities to continue their existing surveys.

(3) The data, calculation, and process for the PI metric are the same as the customer satisfaction survey data for the SQ metrics.

Re: Cases 20-E-0428 & 20-G-0429
Quarterly Credit/Debit Card Payment Report: Q2-2023 REVISED

Dear Secretary Phillips:

In accordance with Appendix P of the Joint Proposal incorporated by reference to the Commission's Order Approving Rate Plan issued November 18, 2021 in Cases 20-E-0428 and 20-G-0429 which continues the reporting established in Section XVIII.B of the Joint Proposal incorporated by reference to the Commission's Order Approving Rate Plan issued June 14, 2018 in Cases 17-E-0459 and 17-G-0460, Central Hudson Gas and Electric Corporation hereby submits its quarterly Credit/Debit Card Payment Report. The data reported includes customer payments made via credit/debit card and customer payments made at authorized payment locations. The revision to the previously submitted report was necessary to reflect credit card payment activity for June that was reported by Central Hudson's financial institution in July business.

Questions regarding the information above may be directed to April Kowalski, who may be reached at (845) 486-5350 or akowalski@cenhud.com.

Sincerely,

Jeffery Doane

Re: Cases 20-E-0428 & 20-G-0429
Quarterly Credit/Debit Card Payment Report: Q4 - 2021

Dear Secretary Phillips,

In accordance with Appendix P of the Joint Proposal incorporated by reference to the Commission's Order Approving Rate Plan issued November 18, 2021 in Cases 20-E-0428 and 20-G-0429 which continues the reporting established in Section XVIII.B of the Joint Proposal incorporated by reference to the Commission's Order Approving Rate Plan issued June 14, 2018 in Cases 17-E-0459 and 17-G-0460, Central Hudson Gas and Electric Corporation is hereby submitting its quarterly Credit/Debit Card Payment Report. The data reported includes customer payments made via credit/debit card and customer payments made at authorized payment locations.

Questions regarding the information above may be directed to Eileen Lomoriello, who may be reached at (845) 486-5283 or elomoriello@cenhud.com.

Sincerely,

/s/Paul A. Colbert

Re: Cases 19-E-0378, 19-G-0379 - Proceeding on Motion of the Commission as to the Rates, charges, rules and Regulations of New York State Electric & Gas Corporation: Quarterly Credit Card Transaction Report

Cases 19-E-0380 and 19-G-0381 – Proceeding on Motion of the Commission as to the Rates, charges, rules and Regulations of Rochester Gas and Electric Corporation: Quarterly Credit Card Transaction Report

Dear Secretary Phillips:

In accordance with Appendix JJ of the Order Approving Electric and Gas Rate Plans in Accord with Joint Proposal, with Modifications, issued and effective November 19, 2020 in the above referenced proceedings, New York State Electric & Gas Corporation ("NYSEG") and Rochester Gas and Electric Corporation ("RG&E") hereby submit the attached Quarterly Credit Card Transaction report, which covers the quarter ending March 31, 2021.

If you have any questions pertaining to this information, please contact me.

Respectfully submitted

Tracey A. Pelella

Re: Cases 19-E-0378, 19-G-0379 - Proceeding on Motion of the Commission as to the Rates, charges, rules and Regulations of New York State Electric & Gas Corporation: Quarterly Credit Card Transaction Report

Cases 19-E-0380 and 19-G-0381 – Proceeding on Motion of the Commission as to the Rates, charges, rules and Regulations of Rochester Gas and Electric Corporation: Quarterly Credit Card Transaction Report

Dear Secretary Phillips:

In accordance with Appendix JJ of the Order Approving Electric and Gas Rate Plans in Accord with Joint Proposal, with Modifications, issued and effective November 19, 2020 in the above referenced proceedings, New York State Electric & Gas Corporation ("NYSEG") and Rochester Gas and Electric Corporation ("RG&E") hereby submit the attached Quarterly Credit Card Transaction report, which covers the quarter ending December 31, 2020.

If you have any questions pertaining to this information, please contact me.

Respectfully submitted

Tracey A. Pelella
