Before the Public Service Commission

THE BROOKLYN UNION GAS COMPANY d/b/a NATIONAL GRID NY and KEYSPAN GAS EAST CORPORATION d/b/a NATIONAL GRID

Rebuttal Testimony

of

Gas Infrastructure and Operations Panel

Case 23-G-0225
Case 23-G-0226

Date: September 22, 2023

TABLE OF CONTENTS

I. Introduction 1
II. Staff's General Approach to Capital Programs Adjustments 3
III. Proposed Adjustments to Customer Connections Programs 9
A. Customer Connections 9
B. Gas System Reinforcements 13
IV. Proposed Adjustments to Mandated Programs 15
A. City State Construction ("CSC") Program 15
B. Proactive Main Replacement Program (Leak Prone Pipe) 18
C. Pipeline Integrity Program 21
D. Main Replacement - Reactive Maintenance, Service Replacements – Inactive Accounts, and Service Replacements Non-Leaks 23
V. Proposed Adjustments to Reliability Programs 25
A. Gas Reliability 25
B. System Automation 26
C. Heater Installation Program 27
VI. Proposed Adjustments to Non-Infrastructure Programs 28
VII. Advanced Communications Infrastructure ("ACI") Category 28
VIII. Future of Heat 30
A. Renewable Natural Gas ("RNG") Interconnection Project 30
IX. Operator Qualifications ("OQ") Program Category 39
X. Indirect Category 40
XI. Proposed O&M and FTE Adjustments 45
A. Tools and Equipment 45
B. ACI Project 46
C. CSC FTEs 46
D. Facilities FTEs 47
E. Resource Coordinators 48
XII. Other Recommendations 48
A. Capitalization of Cast Iron ("CI") Joint Repairs (NYC) 48
B. LPP Unit Cost Incentive 49
C. Capital Reporting 50
D. Greenpoint LNG Investments 50

I. Introduction

Q. Please identify the members of the Gas Infrastructure and Operations Panel.

A. KEDNY and KEDLI's (collectively, the "Companies") Gas Infrastructure and Operations Panels (collectively, "Panel") consist of Ross W. Turrini, Aaron J. Choo, Patty McVeigh, Pradheep Kileti, and Srividya Madhusudhan.

Q. Is this the same Panel that testified previously in these proceedings?

A. Yes. Capitalized terms defined in the Panel's direct and corrections and updates testimony have the same meanings here.

Q. What is the purpose of the Panel's rebuttal testimony?

A. The purpose of the Panel's rebuttal testimony is to respond to certain recommendations set forth in the prepared testimony of the Department of Public Service Staff ("Staff") Gas Infrastructure and Operations Panel ("SGIOP"), the Staff Pipeline Safety Panel ("SPSP"), the Staff Gas Reliability and Supply Panel ("SGRSP"), and the Staff Policy Panel ("SPP"), the City of New York's witness John Sano ("NYC Witness Sano") and New York City Policy Panel ("NYCPP") (collectively, "NYC"), Alliance For a Green Economy ("AGREE"), and Sane Energy Project ("SANE").

The Panel's testimony will address recommendations and proposed adjustments to the Companies' forecast incremental gas capital and operations and maintenance ("O&M") expenditures, including:

- The SGIOP's proposed adjustments to the Customer Connections and System Reinforcements Program and the implications of those adjustments on the Companies' ability to meet forecast demand for gas service. The Panel will also address the recommendations of NYC and SANE to disallow investments for growth-related system expansion and reinforcements;
- The SGIOP's proposed adjustments to the Proactive Main Replacement (Leak Prone Pipe or "LPP") Program, City/State Construction ("CSC") Program, and Reliability Programs;
- The SGIOP's recommendations regarding the Indirect capital portfolio, including significant adjustments to the Companies' proposed Facilities projects;
- The SGRSP's recommendations and proposed adjustments regarding the Companies' renewable natural gas ("RNG") and hydrogen blending projects;
- Staff's proposed adjustments to the Companies' O&M programs and reductions to incremental Full-Time Equivalent ("FTE") positions, including the impacts of reducing or eliminating funding for these programs and positions;
- The SGIOP's recommendation to implement a downward-only capital reconciliation mechanism while rejecting the Companies' proposal to implement symmetrical CSC capital and O&M reconciliation mechanisms; and
- Recommendations by Staff and other parties regarding liquefied natural gas ("LNG") upgrades, capital reporting, new requirements potentially impacting the Companies' construction costs, non-pipes alternatives ("NPAs"), and efficiency incentives.

The Companies' Gas Safety Panel addresses the SGIOP and SPSP's recommendations and proposed adjustments to the LPP metrics and incentives, the Companies' Inside Service Line Inspection Program, Voluntary Integrity Management Program ("IMP"), Damage Prevention Program, and Gas Pipeline Safety and Compliance Program. The Companies' Climate Leadership and Community Protection Act ("CLCPA") Panel addresses various aspects of the RNG interconnection and hydrogen proposals.

Q. Does the Panel sponsor any exhibits as part of its rebuttal testimony?

A. Yes. The Panel sponsors the following exhibits that were prepared under its direction and supervision:

- Exhibit __ (GIOP-1R): Relevant responses to Information Requests ("IR")
- Exhibit __ (GIOP-2R): Fiscal Year ("FY") 2023 Facilities Spend

II. Staff's General Approach to Capital Programs Adjustments

Q. Please summarize the SGIOP's general approach and basis for proposed adjustments to the Companies' capital forecasts.

A. The SGIOP generally supports the Companies' capital plans (at 20) but proposes adjustments for several programs in the Customer Connections, Mandated, Reliability, and Non-Infrastructure categories. The SGIOP offers the following general justifications for its proposed adjustments:

- Where the Companies' forecasts were derived using historic averages of spending, the SGIOP (at 29, 44, 45, and 60) believes the forecasts should exclude FY 2021

from the three-year average because of the impacts of the COVID-19 pandemic on contractor and construction costs.

- The SGIOP (at 31-32) recommends adjustments to the Companies' Gas System Reinforcement Program in certain categories because specific projects have not been identified in in the Data Years.
- The SGIOP (at 54) proposes adjustments to the Companies' Service Replacements – Non-Leaks, Reactive Mains, and Inactive Service forecasts because there have been historic variances between the Companies' budgets and actual spending in these categories.

Q. Have the Companies provided adequate information to the SGIOP and other parties to enable a thorough review of the proposed capital investment plan?

A. Yes. The Companies' direct testimony and exhibits provided extensive information for each program and project, including data sheets (Exhibit __ (GIOP-5)) that contain project descriptions, projects needs and justification, forecasting methodologies, cost drivers, applicable regulatory requirements, and alternatives analyses. The Companies also responded to nearly 400 IRs in these proceedings regarding the details of the capital plan.

Q. Does the Panel agree with the SGIOP's methods and justifications for its proposed adjustments?

A. No, the SGIOP's proposed adjustments are not supported by sufficient data and analysis in several cases. For example, the SGIOP's high-level adjustment to remove FY 2021 from the average historic cost calculation (because it appears relatively higher) does not consider

the specific factors impacting the Companies' spending in that year. To reduce the Companies' rate allowance in certain areas, the SGIOP selectively chooses the historic years used to calculate its unit cost forecast for different cost components – even within the same category (*e.g.*, Mandated). In some cases, the SGIOP argues to include more recent data because it was a better indicator of the Companies' Rate Year costs, while in other cases the SGIOP argues that more recent data – when showing increases – should be normalized out. This approach reduces the Companies' rate allowance by inconsistently including or excluding historic data, which the Panel believes is unreasonable.

Next, the SGIOP removes funding in categories where specific projects have not yet been identified in the Data Years without considering the Companies' planning process for these categories and the need to address emerging system conditions in the outer years to maintain safety and reliability. The Panel describes why certain programs are needed to maintain flexibility to identify specific projects in the future.

Finally, the SGIOP's focus on historic actual-to-budget variances in individual capital categories fails to recognize that the Companies manage their capital spend across the entire portfolio, not just individual categories or projects, which can create variances in given years based on operational priorities and emerging system conditions.

Q. Please describe how the Companies determined their proposed capital forecasts.

A. The Companies determined the appropriate basis and methodology for forecasting Rate Year and Data Year investments on a program-by-program basis. Following a detailed

analysis of each program, including examination of historic spending, the Companies determined whether an average of historic project or unit costs represented the best predictor of Rate Year costs for each program. The Companies also identified projects for which a project estimate, rather than a forecast based solely on historic costs, was more appropriate. In this way, the Companies carefully considered any anomalies prior to setting its forecasts for each program. The Companies' methodologies for deriving program forecasts are provided in the Companies' testimony and exhibits and in response to numerous information requests.

Q. How will the SGIOP's proposals impact the Companies' ability to provide safe and reliable service?

A. Adopting the SGIOP's recommendations would hinder the Companies' ability to deliver on many of the Companies' and the Commission's important policy, environmental, reliability and safety objectives. Specifically, proposed downward adjustments to unit costs in the Mandated category will challenge the Companies' ability to deliver on aggressive goals for LPP replacement and methane reductions. Proposed adjustments in the Reliability category will compromise the Companies' ability to replace aging facilities and equipment that are critical to system operations. The Companies appreciate the SGIOP's concerns for managing increasing costs; however, the reality is that the SGIOP's proposed adjustments will result in the reprioritization of capital investments in a manner that fails to achieve the Companies' and the Commission's goals. This is not the right result from a public policy, reliability, or safety perspective. The Panel discusses in more

detail the impacts of Staff's and intervenors' recommendations and proposed adjustments to individual capital programs in the sections that follow.

Q. Please discuss the SGIOP's recommendation to remove FY 2021 from the historic three-year average cost calculation is several program categories.

A. In several instances where the Companies' forecasts were derived using historic averages of spending, notably the Gas System Reinforcements and Proactive Main Replacement (LPP) programs, the SGIOP proposed to exclude FY 2021 from the three-year average as an "outlier" because it believes this year was artificially high due to the impacts of COVID-19. However, the proposed adjustments are based on a misconception of the factors driving costs in FY 2021, and simply removing that year from the historic costs results in an artificially low unit cost that would prevent the Companies from delivering these important programs (especially when coupled with Staff's proposal to significantly increase LPP retirement mileage over the next several years).

While a project may begin in one fiscal year, it may be completed in a different fiscal year, depending on project complexity and the construction schedule. Also, invoices are paid throughout the project lifecycle as work components are completed in the field (initially main installation invoices, then services invoices, later paving invoices), but a project's retirement units are only recorded when the job is fully complete and in-service, which can occur in a different fiscal year than paid invoices. For these reasons, looking at a single year is typically unhelpful when developing unit-cost forecasts, whereas using a three-year average smooths the impacts of these timing issues.

In this case, contrary to Staff's suggestion, the Companies did not experience higher unit costs in FY 2021 because of the COVID-19 pandemic increasing contractor and construction costs. However, the pandemic did extend the time between project unit completion and invoice payment due to construction and invoicing delays. Because of safety considerations, the Companies focused on work that involved limited customer interactions, such as LPP, in FY 2021. Costs were incurred for LPP projects and partial invoices were paid in FY 2021 (main installation and services work) but scheduling delays resulted in fewer units being completed in FY 2021 and more units being completed in FY 2022. This has the compounding effect of making FY 2021 unit costs appear relatively higher and FY 2022 unit costs appear relatively lower. Therefore, removing FY 2021 from the three-year average artificially lowers the Companies' average unit costs. Indeed, the current trending average unit costs align with the unit costs presented in the Companies' forecast.

Q. Please address SGIOP's proposed adjustment to the FY 2024 capital budgets.

A. The SGIOP (at 10) proposes approximately $23.8 million of adjustments to the Companies' capital forecasts for FY 2024 (the Companies' current fiscal year). The FY 2024 capital budgets were approved by the Commission as part of the 2019 KEDNY and KEDLI Rate Cases. The Companies are currently executing their capital workplans based on these approved budgets and, once the assets are placed into service, the associated costs are being collected through the Net Utility Plant surcharge. Therefore, the Companies do not believe it is appropriate to retroactively adjust FY 2024 and the Commission should reject any attempt to re-open previously approved capital budgets.

III. Proposed Adjustments to Customer Connections Programs

A. Customer Connections

Q. Please summarize the SGIOP's recommended adjustments to the Companies' forecast of new units/connections in the Customer Connections Programs.

A. The SGIOP (at 27) generally agrees with the Companies' methodology for deriving the unit costs in the Customer Connections area but recommends adjustments to the forecast for new units/connections and makes corresponding adjustments to the Install Main, Install Services, and Install Meter/Regulator programs. The Companies forecast the number of units based on the recent experience with new customer connections in FY 2022 (discussed more below), then made adjustments based on factors impacting future growth and gas saturation in the service territories. The Companies also made downward adjustments to the number of new connections based on the anticipated impacts of known regulatory changes affecting new gas connections the Rate Year and Data Years, specifically restrictions and prohibitions on certain gas connections resulting from New York City's Local Law 154 (prohibiting on-site combustion of fossil fuels in new buildings (with exceptions) beginning in 2024). Instead of using the most recent customer connections data, the SGIOP (at 27) recommends using a three-year average of the number of services installed from FY 2020 to FY 2022, which the SGIOP suggests "captures more of a trend the Companies have experienced historically for customer connections." The SGIOP argues that the proposed adjustments for the pending legislative/regulatory changes is not appropriate because there is no experience operating under these conditions and, therefore, it is difficult to predict the potential impacts on new connections.

Q. What is the Companies' response to this recommendation?

A. The Companies maintain that their approach to forecasting the number of new connections based on recent data (FY 2022) is a more nuanced and informed view, as compared to using a three-year average, considering the recent trends in new connections and anticipated impacts from the regulatory/legislative changes. First, given various economic and market factors that can influence the number of customer connections, the Companies believe current customer and market data is the best indicator of near-term demand for new connections. Next, given New York City's restrictions on certain new gas connections are expected to take place during the Rate Year (*i.e.*, are known), and the Companies can make reasonable assumptions on the likely impacts given the types of service connections that will be impacted (*i.e.*, are measurable), the Companies believe their approach produces a more informed forecast for new gas connections in the future. Indeed, there are too many dynamic factors influencing future growth on the system to rely on a simple, three-year average.

Additionally, the Companies' recent experience with new applications supports the view that Staff's forecast of new units/connections is understated. For example, KEDNY received 2,622 and 2,506 new applications in FY 2022 and FY 2023, respectively. This exceeds the SGIOP's adjusted forecast based on a historic three-year average (2,336 connections/year). Several market factors are likely contributing to this trend, including the cost of alternative heating options/fuels and increased customers interest in submitting applications for new gas service prior to the effective date of the new restrictions. This

recent data suggests the Companies' approach is a better indicator of demand for future connections.

Q. How are the Companies' addressing the lack of operating experience with the upcoming restrictions on new gas connections (Local Law 154)?

A. As the Panel explained in its direct testimony, to address the uncertainty created by the phased implementation of restrictions on the number of new gas connections, the Companies propose to continue the existing two-way tracker for their respective Customer Connections programs. While the SGIOP did not address this proposal in its testimony, a two-way tracker will ensure that the level of funding matches the number of new connections in the Rate Year and Data Years, protecting both the Companies and customers from any material deviations between the forecasts and actual results.

Q. Please comment on NYC's proposal to eliminate all funding for Customer Connections from the capital budget.

A. NYC Witness Sano (at 3) proposes eliminating "all proposed capital spending in the Customer Connections category in furtherance of the requirements under New York's Climate Leadership & Community Protection Act ('CLCPA') and related City laws." This is an unreasonable proposal for several reasons. As we explained in our direct testimony, the Companies are required by the Public Service Law, the Commission's regulations, and the Company's tariff to extend service to new customers in its service territory. While the phased implementation of restrictions on gas connections in New York City will have an impact on the number of gas connections in the future, the NYC acknowledges the

restrictions will occur over time, and there are numerous exceptions that will still require the Companies to connect new customers (*e.g.,* oil-to-gas conversions). The Companies have attempted to address the impact of the pending restrictions through downward adjustments to the growth forecast (KEDNY 39.4 percent and KEDLI 20.6 percent) but eliminating all program costs for customer connections unfairly requires the Companies to fund new connection costs and establish regulatory deferrals that would need to be collected in the future. The Companies' approach to have the capital budgets reflect a reasonable amount of funding for customer connections based on an informed forecast, and a true-up mechanism for costs based on actual experience, is better from both a ratemaking and affordability standpoint. Given that the Companies will have a continuing obligation to connect new customers during the period covered by these rate cases, it would be unreasonable to preclude recovery of the costs incurred in fulfilling that obligation.

Q. Please comment on the potential impacts of the All Electric Building Act?

A. As noted by NYC Witness Sano, the State of New York's "All Electric Building Act" (included in Part RR of Chapter 56 of the Laws of 2023) restricts gas connections statewide in new construction for buildings with fewer than seven stories beginning in 2026 and taller buildings beginning in 2029. Like Local Law 154, the law does not impact connections to existing buildings (*e.g.*, oil-to-gas conversions) and there are numerous exceptions for connections to new construction (*e.g.*, hospitals, critical infrastructure, and commercial food establishments). Because the All Electric Building Act (i) will become effective after Local Law 154 (which will impact most of the service territory (by customer count) and is already reflected in the unit forecast); (ii) does not impact customer connections in the Rate Year;

(iii) will not impact potential applicants in larger buildings until after the term of the proposed rate plans; and (iv) includes exceptions that will continue to require the Companies to connect new customers, the Companies do not believe further adjustment to the Customer Connections forecast is warranted at this time. Additionally, to the extent the All Electric Buildings Act reduces customer connections beyond the Companies' adjusted forecast, the associated cost reductions would be reflected in the Companies' proposed tracker for new customer connections.

B. Gas System Reinforcements

Q. Please address the SGIOP's proposed adjustments (at 29-31) to the Companies' Gas System Reinforcement Programs in the Rate Year.

A. For the Gas System Reinforcement Program, the Companies used a three-year average unit cost from FY 2020 to FY 2022 to develop the Rate Year forecast. Again, the SGIOP (at 29-30) proposes to adjust the unit cost to remove FY 2021 because of the perceived impact of the pandemic, proposing to instead utilize a three-year average comprised of FY 2019, FY 2020, and FY 2022. As the Panel discusses above, removing FY 2021 from a three-year average understates the unit cost and compromises the Companies' ability to deliver this critical program.

Q. Please address the SGIOP's proposed adjustments (at 30-32) to the Gas System Reinforcement Program in the Data Years.

A. The SGIOP recommends significant reductions to the Companies' forecast Gas System Reinforcement budgets in FY 2026 to FY 2028 because the specific projects in these years

have not yet been identified. Instead, the SGIOP proposes budgets for FY 2026 to FY 2028 using the forecast for FY 2025 adjusted for inflation. The SGIOP's recommendation is not informed by any specific analysis.

The Gas System Reinforcement Program projects are required to maintain pressure above system minimums on the gas network during periods of peak demand, thereby maintaining continuous service to all gas customers. The low-pressure network is very sensitive to changes in demand and, as such, reinforcement projects on the low-pressure network are only identified two years out. As the demand forecast and gas system hydraulic models are updated each year, reinforcement projects are developed to address emerging needs on the system. Thus, the low-pressure project budget placeholders are necessary to account for projects that will be identified in future years. While high-pressure systems are generally more resilient to forecast changes, placeholders for high-pressure reinforcement projects are also necessary to support the Companies' LPP replacement programs.

In summary, while these reinforcement projects have yet to be identified in the outer years, the Companies' operating experience indicates the need for reinforcements going forward – especially as there is continued growth on the system. The SGIOP's recommendation may jeopardize the Companies' ability to ensure reliable service and meet its obligations to serve increasing demand from existing customers.

IV. Proposed Adjustments to Mandated Programs

A. City State Construction ("CSC") Program

Q. Please explain the SGIOP's adjustments to KEDNY and KEDLI's CSC/Public Works Reimbursable forecasts.

A. The SGIOP (at 40) agrees with the Companies' general methodology for forecasting the CSC budgets, but Staff recommends imputing approximately $18.3 million and $1.3 million to KEDNY and KEDLI's CSC Reimbursable forecasts, respectively, based on an expectation that the Companies will collect some amount of reimbursements from New York City under the Cost Sharing Agreement ("CSA") (until its expiration on June 30, 2025). The SGIOP's proposed adjustments are based on a calculated historical reimbursement percentage of 5.68 percent for KEDNY and 10.81 percent for KEDLI. The SGIOP (at 41) acknowledges that the Companies have not received reimbursements from New York City since FY 2020; nonetheless, Staff believes it is appropriate to impute some level of reimbursements because "New York City is required to reimburse the [Companies] for work related to the CSC projects."

Q. Does the Panel agree with Staff's adjustments to its CSC Program?

A. No. Given the Companies' significant challenges securing reimbursements from New York City, which Staff concedes have resulted in zero reimbursements over the last three years, the Companies believe the CSC program forecast appropriately excluded any level of assumed reimbursement under the CSA.

In response to Staff's IR No. DPS-NYC-1 (Exhibit __ (GIOP-1R)), New York City indicated that outstanding reimbursements under the CSA, which amount to more than $175 million, are currently the subject of "settlement discussions between the City of New York and National Grid."

Given the Companies are already at risk of under recovering millions in reimbursements for past work under the CSA, the fact that no reimbursement payments have been made in years, and the fact that these unremunerated reimbursements have been built into rates, it is simply unreasonable to assume the Companies will be reimbursed for an amount of CSC expenditures going forward. To the extent the Companies are successful in securing reimbursements in the future, the funds will be credited back to customers through the CSC capital tracker (discussed below). Therefore, the Companies proposal to exclude reimbursements from the CSC forecast fairly balances the need to fund this mandated program while ensuring customers will receive the full benefit of any reimbursements through the tracker mechanism.

Q. Does the current true-up mechanism for CSC expenditures address KEDNY's concern that the program will be under funded if Staff's recommendation to impute CSA reimbursements is accepted?

A. No. Under the Joint Proposal adopted in the 2019 KEDNY and KEDLI Rate Cases, KEDNY and KEDLI have a reconciliation mechanism for CSC capital expenditures. To the extent that Companies' actual capital spending for CSC, net of reimbursements, differs from the forecast amount in a Rate Year, the Companies can defer the revenue requirement

effect (excluding O&M expenses) associated with 90 percent of the difference for future recovery from or return to customers. This mechanism provides some protection against the volatility in the CSC process due to changing New York City plans and the timing lag between rate setting and New York City's year-to-year project construction determinations. As stated in the Panel's direct testimony, however, a partial deferral mechanism is not a substitute for appropriate rate recovery. The Companies must be permitted to recover enough in rates to fully fund the necessary work of this mandated program. The Companies' forecasts are based on known factors regarding the state of CSA reimbursements, whereas the reconciliation is intended to cover for unknown cost increases. Therefore, having a reconciliation in place does not blunt the detrimental effects of removing nearly $20 million from the Companies' CSC program forecasts.

Q. Does the SGIOP testimony address the Companies' proposal to modify their current reconciliation mechanism to allow deferral of 100 percent of the difference between forecast and actual CSC capital expenditures and to add a reconciliation mechanism for CSC-related O&M?

A. The SGIOP (at 108-109) does not support the Companies' proposal to create a fully reconciling capital deferral mechanism for CSC costs. While acknowledging that CSC work "is reactive to the municipal projects and certain aspects of this program are beyond the Companies' control," Staff argues that the Companies are still responsible for managing the projects and contractors who ultimately complete the work and, therefore, a fully reconciling mechanism is not appropriate. For the same reasons, Staff opposes a reconciliation for CSC-related O&M costs.

As stated above, the capital reconciliation mechanism is intended to manage the aspects of CSC that are *not* within the Companies' control, including the unpredictability of the work that will ultimately be required each year. Because this work is mandated and beyond the Companies' control, as acknowledged by Staff, there is simply no basis for the mechanism to provide less than a full reconciliation for this mandated capital work.

Moreover, the SGIOP states no justification for disallowing a CSC-related O&M reconciliation mechanism considering that the Companies have demonstrated significant volatility in O&M spending year-on-year. Even if the Companies manage this program to maximize efficiencies and controllable costs, the inability to predict future program needs would still justify a reconciliation mechanism.

In summary, the Companies' CSC programs present unique challenges in the ability to accurately forecast, and, for that reason, capital and O&M reconciliation mechanisms are appropriate to protect both customers and the Companies.

B. <u>Proactive Main Replacement Program (Leak Prone Pipe)</u>

Q. Please describe the SGIOP's adjustments to the Companies' forecasts for their Proactive Main Replacement Programs.

A. The Companies used a three-year cost history (FY 2020 to FY 2022) and applied an inflation factor to develop the unit cost for the planned proactive main replacements (LPP) in the Rate Year. The SGIOP (at 44-45) generally agrees with the Companies' forecasting methodology for LPP replacement unit costs but recommends several adjustments. First,

the SGIOP proposes to remove costs incurred in FY 2021 from the unit cost calculation under a theory this year was an "outlier" due to allegedly inflated costs resulting from the pandemic. Next, the SGIOP adjusted the mileage targets for this program based on the recommendation from the SPSP to increase both Companies' annual LPP retirements. (SGIOP at 45). Finally, the SGIOP increased the number of LPP replacement miles assumed to be achieved through the CSC Program and other capital programs. (SGIOP at 46).

Q. Do the Companies agree with Staff proposed unit cost adjustments?

A. No. For the reasons discussed above, removing FY 2021 from the three-year average is not a reasonable approach to calculating historic unit costs. In addition, the Panel observes the following issues with Staff's unit cost calculation:

- Staff's calculation does not provide funding for the additional miles Staff assumes will be achieved through the CSC program;
- Staff's calculation did not provide funding for five additional miles included in KEDLI's CY 2027 mileage targets; and
- Staff's funded targets and minimum replace targets are not aligned, as was Staff's intention. As discussed by the Companies' Gas Safety Panel, the Companies believe that the annual minimum replacement targets should be five miles less than the funded targets each calendar year (with a cumulative target at the end of the rate plan), consistent with the current metric structure.

Therefore, the SGIOP's adjustment will underfund this program and jeopardize the Companies' ability to keep pace with targets and goals for LPP removal, and the associated methane emission reductions.

Q. Please address the recommendations regarding the annual mileage targets in the Proactive Main Replacement (LPP) Program?

A. Staff's recommendations regarding the LPP replacement targets, metrics, incentives, and reporting are addressed by the Companies' Gas Safety Panel's Rebuttal Testimony. As discussed in that testimony, Staff's proposed LPP mileage targets for KEDNY and KEDLI are approximately 40 percent and 20 percent higher, respectively, than the already aggressive targets proposed by the Companies.

Q. Does the SGIOP's adjustments include the incremental O&M costs from the increased mileage?

A. No. In addition to the capital component of main replacement, there is an O&M component for the cost to disconnect customers from the retired main and reconnect customers to the new main (referred to as disconnects and reconnects, or "D&Rs"). The SGIOP's adjustments did not include the cost for the additional D&Rs that would be required given the significant increase in proposed LPP mileage. Additionally, the SGIOP does not include the costs associated with the O&M component of the incremental resource coordinators, project managers, engineers, and other personnel that would be required to deliver a significantly expanded main replacement program.

Q. Does the Panel agree with the SGIOP's adjustments regarding the number of miles forecast to be retired from the CSC Program and other capital programs?

A. No. The SGIOP (at 36) developed a ratio of total CSC expenditures to LPP miles replaced based on actual costs in FY 2021 to FY 2023, and then applied this ratio to its forecast CSC budgets to project the mileage of LPP expected to be replaced through the CSC program. This back-of-the-envelope approach is flawed for several reasons. The ability to retire LPP through the CSC program depends on the size, type, and location of the municipal construction projects in the service territory. Because of the inherent difficulties predicting the scope and scale of CSC work, it is not reasonable to assume that a simple ratio of historic spend to LPP miles will predict future opportunities to retire additional LPP from the CSC or other capital program. For example, large CSC projects may not produce any LPP replacements depending on the impacted area of the distribution system. Therefore, the SGIOP's proposal is this area should be rejected.

C. <u>Pipeline Integrity Program</u>

Q. Please describe the SGIOP's proposed adjustments to the Companies' Pipeline Integrity Programs.

A. The SGIOP (at 48) proposes to adjust the forecast for KEDLI's Pipeline Integrity – Northwest Nassau Transmission Main & Control Valve – Phase 3 Project. While acknowledging KEDLI provided a "detailed" estimate that allocated costs by fiscal year based on activities such as project development and design, permitting, resource availability, long-lead material purchases, gas-outage windows, construction schedules, and project need dates, the SGIOP nonetheless proposes to adjust the forecast based on a

comparable project, Northwest Nassau Phase 2. Using the Phase 2 costs, adjusted for inflation, and increased by five percent to account for the increased mileage of Phase 3, the SGIOP proposes adjustments of $7.7 million in the Rate Year, $8.25 million in Data Year 1, and $8.622 million in Data Year 2.

Q. Does the Panel agree with the proposed adjustment to the Northwest Nassau Transmission Main & Control Valve – Phase 3 Project?

A. No. The SGIOP fails to explain why using costs for a comparable, but entirely separate and distinct, project are a superior approach to using a detailed estimate for the actual project. Costs can vary between these types of projects for any number of reasons, including the location of facilities, work schedules and restrictions, soil type and drilling requirements, permitting requirements, etc.

Indeed, Northwest Nassau Phase 3 differs from Phase 2 in several respects. First, Phase 3 will be performed largely at night along the north service road of the Long Island Expressway, while Phase 2 was completed during the day and on roads with less traffic congestion. The Phase 3 location will require KEDLI to utilize additional traffic control and protection. Night work will increase costs due to collective bargaining rules dictating higher rates for night work by employees, as well as increase the costs to open asphalt plants and other critical places after hours. Also, excavation depths and sheeting requirements will differ for the two phases of the project, as each installation crosses different utilities and obstructions. Finally, since the time Phase 2 was sent out for bid, contractor costs overall have increased significantly, which will drive higher costs for Phase 3.

In summary, KEDLI's detailed assessment of the actual costs to complete this project is a far more accurate approach than an approach using a comparable project as a proxy, which fails to consider any job-specific factors impacting costs. For this reason, the SGIOP adjustments should be rejected.

D. <u>Main Replacement - Reactive Maintenance, Service Replacements – Inactive Accounts, and Service Replacements Non-Leaks</u>

Q. What are the SGIOP's proposed adjustments to the Companies' Main Replacement – Maintenance Program?

A. The SGIOP (at 52-53) notes that the Companies' response to IR No. DPS-792 shows that the forecasts for this program are based on the average spending over two years (FY 2020 and FY 2022), adjusted for inflation. The SGIOP does not recommend using FY 2021, FY 2022, or FY 2023 "because the expenditures in those years had large fluctuations that may have been affected by the COVID-19 pandemic." Instead, the SGIOP (at 53) recommends recalculating the budgets for these programs based on updated two-year averages using FY 2019 and FY 2020, which it claims, "more closely align with and better represent the actual expenditures the Companies should anticipate in the future."

The SGIOP made a further adjustment to correct an identified error in KEDNY's calculation that excluded forecast work appropriately reflected in this category. For KEDNY, these adjustments result in in a downward adjustment of $0.930 million, $0.954 million, $0.973 million, $0.992 million, and $1.013 million for FY 2024, the Rate Year, Data Year 1, Data Year 2, and Data Year 3, respectively.

Q. Does the Panel agree with the SGIOP's recommendation for this program?

A. No. The Companies believe that their methodology is the more reasonable approach to forecasting costs in the Rate Year and Data Years.

Q. What are the SGIOP's proposed adjustments to the Companies' Service Replacements – Inactive Accounts Program?

A. The SGIOP notes that the Companies' response to IR No. DPS-652, Attachment 1 explains that the forecast for this program is based on the historic average spending over three years (FY 2019 – FY 2021), adjusted for inflation. The SGIOP also notes that KEDNY explained that the costs for another program were inadvertently included in this program. The SGIOP proposes in this case using the three most recent years of actual expenditures (FY 2021 to FY 2023) and correcting for the identified error. This results in a downward adjustment of $0.322 million, $0.329 million, $0.335 million, $0.342 million, and $0.348 million for FY24, the Rate Year, Data Year 1, Data Year 2, and Data Year 3, respectively.

Q. Does the Panel agree with the SGIOP's recommendation for this program?

A. No. The Companies believe that their methodology is the more reasonable approach to forecasting costs in the Rate Year and Data Years.

Q. What are the SGIOP's proposed adjustments to the Companies' Service Replacements – Non-Leaks?

A. The SGIOP notes that the Companies' response to IR No. DPS-654, Attachment 1 explains that the forecasts for this program are based on the historic average spending over three

years (FY 2020 to FY 2022), adjusted for inflation. The SGIOP explains that it identified a consistent underspend for this program for KEDNY and KEDLI in FY 2021 to FY 2023 and, therefore, recommends downward adjustments based a three-year historic average of actual costs from FY 2021 to FY 2023. For KEDNY, this results in a downward adjustment of $0.990 million, $1.014 million, $1.034 million, $1.055 million, and $1.076 million for FY 2024, the Rate Year, Data Year 1, Data Year 2, and Data Year 3, respectively. For KEDLI, this results in a downward adjustment of $0.528 million, $0.540 million, $0.551 million, $0.562 million, and $0.573 million for FY 2024, the Rate Year, Data Year 1, Data Year 2, and Data Year 3, respectively.

Q. Does the Panel agree with the SGIOP's recommendation for this program?

A. No. The Companies believe that their methodology is the more reasonable approach to forecasting costs in the Rate Year and Data Years.

V. Proposed Adjustments to Reliability Programs

A. Gas Reliability

Q. Please explain the SGIOP's approach to adjusting to the Reliability spending category.

A. The SGIOP generally agrees with the Companies' approach to forecasting the budget for the Gas Reliability Program but, for projects with a main installation component, it recommends using a three-year average of FY 2019, FY 2020, and FY 2022 to calculate the unit cost. Again, the SGIOP takes the position that FY 2021 unit costs and contractor costs were significantly higher because of the pandemic.

Q. Do the Companies agree with the SGIOP's recommended adjustments?

A. No. As discussed above, removing FY 2021 from the unit cost calculation because of a misconception of the impacts of the pandemic on FY 2021 costs will result in underfunding this important program.

B. <u>System Automation</u>

Q. Please explain the SGIOP's recommended adjustments to the System Automation Program.

A. The SGIOP explains that the Companies' forecast for System Automation was based on the forecast program expenditures in FY 2023 plus increases for incremental costs associated with future telecommunications upgrades and inflation. The SGIOP notes, however, the Companies underspent their budgets for this program in FY 2023 and, in Staff's view, unable to articulate the incremental telecommunications costs. Therefore, the SGIOP recommends using a three-year average of actual spend from FY 2021 to FY 2023. (SGIOP at 63). For KEDNY this results in a reduction of $0.393 million, $0.419 million, $0.427 million, $0.436 million, and $0.445 million, for FY24, the Rate Year, Data Year 1, Data Year 2, and Data Year 3, respectively. For KEDLI this results in a reduction of $0.446 million, $0.450 million, $0.672 million, $0.729 million, and $0.787 million, for FY24, the Rate Year, Data Year 1, Data Year 2, and Data Year 3, respectively.

Q. Does the Panel agree with the SGIOP's adjustments proposed adjustments to this program?

A. No. The Companies believe that their methodology is the more reasonable approach to forecasting costs in the Rate Year and Data Years.

C. Heater Installation Program

Q. **What does the SGIOP recommend for KEDLI's Heater Program?**

A. The SGIOP proposes adjustments to this program based on a finding that KEDLI's historic spending in this category was lower than the Rate Year forecast. Additionally, the SGIOP alleges that KEDLI "failed to support the total project cost, project list, or the number of projects expected to be completed for this program." (SGIOP at 64-65). Therefore, the SGIOP recommends using a three-year average from FY 2020, FY 2021, and FY 2023 to forecast this program. The results of the SGIOP proposed adjustments for KEDLI are a reduction of $0.364 million, $0.371 million, $0.382 million, $0.392 million, and $0.403 million, for FY24, the Rate Year, Data Year 1, Data Year 2, and Data Year 3, respectively.

Q. Does the Panel agree with the SGIOP's proposed adjustments to this program?

A. No. Heaters must be replaced as they reach the end of their useful lives, so that the program needs can vary significantly depending on the age of assets. These types of projects are risk driven and the work plan is in part dependent on the conditions of the assets as they continue to age. These are the types of factors the Companies consider when setting future project and program budgets, and that not addressed by the SGIOP

when proposing adjustments based on historic trends without additional analysis or support.

VI. Proposed Adjustments to Non-Infrastructure Programs

Q. Please comment on the proposed adjustments to the Non-Infrastructure programs.

A. The SGIOP proposes to adjust the forecasts for several Non-Infrastructure programs based on updated or expanded historic averages. Generally, the Companies believe forecasts in this category based on FY 2023 budgets are an appropriate proxy for costs in the Rate Year. Additionally, for the Tools and Equipment Program, increases in costs follow the trend of increased capital workload (and associated FTEs) and should not be reduced. For the Telecomm programs, the forecasts for the Rate Year reflect the need to replace facilities that are at or near the end of useful life.

VII. Advanced Communications Infrastructure ("ACI") Category

Q. Please described Staff's recommendation for the ACI Program?

A. The ACI Program will fund development of a detailed scope of work and business plan to deploy an interconnected network to facilitate the installation of smart meters and methane detection devices that will provide real-time safety benefits and enable additional metering functionality. ACI consists of three components: (i) an ACI Network Program, (ii) an AMI Residential Methane Detector ("RMD") Program, and (iii) AMI Smart Meter Replacement Program proposals.

The SPP (at 71) opposes the Companies' proposal to deploy an ACI Program on the grounds the "Companies are unable to demonstrate that the benefits of their AMI program proposals justify the costs." The SPP's position is largely based on fact that the Companies have not yet developed detailed Benefit Cost Analyses ("BCA") for the project. The SPSP proposes an alternative to the RMD component of the ACI Program that would use connected RMDs and make use of a Long-Range Wide Area Network, similar to the RMDs used by Con Edison in its service territory.

Q. What is the Panel's response to the SPP's recommendation to reject the ACI Network and Smart Meter proposal at this time?

A. The SPP, while citing the testimony that explains the approach to develop a detailed deployment plan and cost analysis in the first two years of the program, still appears to misconstrue the Companies' approach to this project.

The Companies' Gas Safety Panel explained that the AMI Network Program includes two phases: Phase One involves a detailed analysis of AMI network options and development of a detailed business case and information technology ("IT") plan. The Companies requested incremental O&M costs of $1 million annually in the Rate Year and Data Year 1 to complete this work. If Phase One is approved, Phase Two will involve upgrading IT back-office system integrations and deployment of a field area network to support the program.

Therefore, while it is true the Companies' do not yet have detailed BCAs for the project, the Companies described that the initial funding for the project would be used to develop this type of analysis as part of a longer-term deployment plan for the ACI Network and AMI Smart Meter Replacement Program. Given the SPSP's interest in deploying connected RMDs in the Companies' service territories, the Commission should support funding for Phase I and II of this project.

Q. What is the Panel's response to the SPP and SPSP's alternate proposal to the Companies' RMD proposal?

A. As explained in the Gas Safety Panel's rebuttal testimony, Staff's proposal is not workable because, unlike Con Edison who has installed an AMI network in its service territory, the Companies do not have access to a network that would allow for the deployment of connected RMDs.

VIII. <u>Future of Heat</u>

A. <u>Renewable Natural Gas ("RNG") Interconnection Project</u>

Q. Please provide an overview of the SGRSP's testimony on the RNG Interconnection Project.

A. The SGRSP (at 12-16) makes the following general observations on the project's potential to support system reliability and the State's energy policy goals:

- New RNG sources can help offset the need for additional upstream pipeline capacity and the project is compatible with the Companies' need to address supply constrains; and

- The Climate Action Council's ("CAC") recognized that alternative fuels such as RNG may have a role in the energy transition. RNG can help achieve the CLCPA's goals of a 40 percent reduction in greenhouse gas emissions from 1990 by 2030 and 85 percent by 2040.

Q. What are the SGRSP's recommendations regarding the Companies' RNG Interconnection Projects?

A. The SGRSP (at 14-19), Staff makes the following recommendations regarding the Companies' RNG Interconnection Projects:

- Due to the uncertainty of the Companies' RNG Interconnection Projects' in-service date, the Commission should remove these projects from the capital budget and projected plant in-service in this rate proceeding and, instead, allow the Companies to recover the revenue requirement for these projects through a surcharge mechanism if they are built and placed into service during the Rate Year;
- The surcharge mechanism should be limited to the revenue requirement impacts of the current estimated costs of the Companies' RNG Interconnection projects;
- Similar to the requirements instituted in Con Edison's gas rate proceeding (Case 22-G-0065), the Commission should require the Companies to file a report 90 days prior to construction of any RNG interconnection project containing information on: the project cost estimate, reliability benefits to the system in the vicinity of the project, the RNG source materials, and a detailed accounting of the upstream GHG emissions avoided by the RNG;
- Costs associated with the purchase of RNG should be addressed through the Gas Adjustment Statement;

- The Companies should not purchase the environmental benefits associated with RNG; and
- Staff does not support the three incremental FTEs proposed by the Companies to support the Companies' RNG Interconnection Projects.

Q. Do the Companies agree with any of the SGRSP's recommendations regarding the RNG Interconnection Projects?

A. In part. The Companies agree with the SGRSP's recommendations to file a report 90 days prior to construction of any RNG Interconnection Project and that costs associated with purchase of RNG be accomplished through the Gas Adjustment Statement.

Q. What is the Companies' position on Staff's other recommendations regarding the RNG Interconnection Projects?

A. The Companies do not agree that recovery of the revenue requirement for the Companies' RNG Interconnection Projects should be accomplished through a surcharge mechanism if the projects are built and placed into service during the Rate Year. The Companies have been working with the developers and, due to the Inflation Reduction Act ("IRA") that requires these projects commence construction prior to December 31, 2024, are optimistic that the developers can deliver an RNG interconnection project as scheduled to meet the IRA timeline.

The Companies also disagrees that recovery of the revenue requirement for the RNG Interconnection Projects be limited to the current estimated costs without accounting for

unanticipated cost increases for labor and materials. Recent years have seen unprecedented issues with supply chain and increases in costs of both construction labor and materials.

Next, the Companies believe that they should be permitted to purchase environmental attributes of RNG. Although the Companies are not proposing to procure the environmental attributes from the RNG Interconnection Projects, the adoption of a clean fuel standard, or other change in market conditions, may necessitate the Companies to procure environmental attributes of alternative fuels during the term of the rate plan. Therefore, the Companies need to maintain the flexibility to purchase environmental attributes of RNG or other alternative fuels and the Commission should not tie the Companies' hands from being able to make these decisions when beneficial to customers.

Finally, the Companies require additional staffing in this area: to perform engineering analysis; support application of standards, procedures and state/federal requirements in system designs; collaborate with internal and external stakeholders to enable safe and reliable interconnections of renewables into gas system. The SGRSP also supports further exploration of RNG interconnections as NPAs for capacity constrained areas that will be supported by these incremental FTEs.

B. <u>Hydrogen Pilot (HyGrid)</u>

Q. Please provide an overview of the SGRSP testimony as it relates to KEDLI's hydrogen blending pilot known as the HyGrid project.

A. The SGRSP initially notes the CAC Scoping Plan's acknowledged the need to further study the use of hydrogen as an alternative fuel to help decarbonize difficult sectors. Staff offers the following additional comments regarding the HyGrid Project (at 26-31):

- Due to the nascent nature of hydrogen blending programs in New York State, the SGRSP is not familiar with the permeability of existing in-service pipeline materials by hydrogen and associated safety considerations;
- Odorant used should not interact with the hydrogen blended gas so as to render the odorant ineffective, become toxic, or cause harm to the integrity of the system;
- Leak detection devices might not appropriately detect or alarm for a blend; especially if there's variations in the concentrations of the blend; and
- The HyGrid project is not far enough in design to meet the September 2024 in-service date.

Q. What are the SGRSP's recommendations regarding the HyGrid Project?

A. The SGRSP makes the following recommendations regarding the HyGrid Project:

- The HyGrid Project should be delayed for one year and the requested FTEs for the project should be removed from the revenue requirement for the Rate Year;
- The Commission should set a cap on the capital costs of the HyGrid Project and any additional pilot costs above the cap should be funded by shareholders;
- Further detailed study is required to establish permeability rates;
- Any pilot program will need to adequately address these safety concerns and any other operational considerations caused by the introduction of hydrogen into the gas system; and

- Blending should not occur on segments of the system with known leaks or on pipeline materials known to be leak prone. Specifically, the SGRSP recommends that that any hydrogen blending only occur in plastic or protected steel segments and that the Companies take affirmative steps to inspect and repair any and all known leaks prior to any blending on such segments.

Q. Do the Companies agree with the SGRSP's recommendations summarized above regarding the HyGrid Project?

A. The Companies agree with the SGRSP's recommendations with two exceptions. First, even though the SGRSP recommends delaying the in-service date of the HyGrid Project by one year, the Companies will need to hire the proposed FTEs, one in FY 2024 and the second in the Rate Year (FY 2025), to pursue engineering and design; support application of standards, procedures and state or federal requirements in system designs; permitting; conduct community and customer outreach; coordinate with the Town of Hempstead; and conduct the procurement process for equipment and construction of the HyGrid Project. Second, the Companies disagree with capping the capital costs of the HyGrid Project. As noted above, in recent years the world has experienced unprecedented supply chain problems and increased costs for construction labor and materials. It is appropriate to allow recovery for cost increases attributable to inflation, supply chain issues, and similar unanticipated items.

Q. Please address the SGRSP's recommendations regarding the safety of hydrogen blending.

A. National Grid agrees that safety is paramount, and it is KEDLI's intention that any efforts to introduce hydrogen into the Company's infrastructure or its customers' equipment will be performed with safety as the number one consideration. The Company has examined the issues Staff identified prior to proposing the HyGrid project. National Grid's frequently asked questions ("FAQ") document, "The Critical Role of Hydrogen in Our Clean Energy Future" (December 2022) ("Hydrogen FAQ"), included in IR No. NRDC-27, Attachment 1, a copy of which is provided in Exhibit ___ (GIOP- 1R), addresses the safety considerations associated with hydrogen blending.

As summarized in the Hydrogen FAQ, gas systems in the U.S., including some portions of the Companies' networks, have safely distributed hydrogen before, primarily in the form of manufactured gas, which had as much as 50 percent hydrogen blend by volume flowing through the system. Hawaii Gas Company currently delivers residential customers with gas containing up to 15 percent by volume hydrogen. In addition, there are over 1,600 miles of dedicated hydrogen pipeline currently operating in the U.S., including three miles in New York State. As the Hydrogen FAQ notes, a recent study also found that gas infrastructure that does not leak when carrying natural gas likewise will not leak when carrying hydrogen. The piping in the Point Lookout neighborhood into which hydrogen will be blended is non-LPP. That was one of the primary reasons for selecting this location for the HyGrid pilot.

National Grid is working with technical and industry partners on research projects covering personnel and customer safety, pipeline integrity, material capabilities, gas blending, metering and measurement technologies, leak detection, and appliance performance. These efforts include work with the U.S. Department of Energy and four of their national labs, as well as with NYSERDA and Stony Brook University.

In summary, hydrogen is a safe fuel when correctly implemented, and National Grid will take all appropriate measures for the safety of our communities, customers, and employees.

Q. What adjustments is the SGIOP recommending to the revenue requirement in this proceeding attributable to the Companies' HyGrid Project based on the SGRSP's recommendations?

A. The SGIOP (at 73-74) recommends moving the spending for the HyGrid Project to the Rate Year and Data Year 1.

Q. Do the Companies agree with SGIOP's adjustments to the revenue requirement for the Companies' HyGrid Project?

A. The Companies agree with moving the spending for the HyGrid Project to the Rate Year and Data Year 1 but need to have the ability to hire an FTE in FY 2024 and another in in the Rate Year to support the HyGrid Project.

Q. Do the Companies have any other comments to the SGRSP's direct testimony they want to address?

A. The SGRSP recommended that the FTEs for the Companies Utility Thermal Energy Network ("UTEN") pilots be addressed in Case 22-M-0429 where the Companies have proposed the cost recovery mechanisms for the proposed UTEN pilot projects. The Companies do not agree with the SGRSP's recommendation because rate cases are typically the proceedings where utilities include incremental FTE requests. Furthermore, additional FTEs with relevant experience are needed to support the development of the Companies' pilot proposals in accordance with the guidance included in the Commission's Order in Case 22-M-0429, issued on September 14, 2023. In that Order, the Commission required utilities to submit further information on UTEN pilot project scope, feasibility, stakeholder engagement, engineering design and the customer protection plan by December 15, 2023 before any project can advance to Stage 2. These FTEs will be responsible for the work necessary to support Stage 2. Therefore, it is appropriate for the Commission to approve the incremental FTEs for the UTEN pilots now as the Commission will not address cost recovery in Case 22-M-0429 until much later in calendar year 2024. Further, approval of FTEs in this proceeding will not impact the cost recovery mechanisms for the UTEN projects the Commission ultimately adopts in Case 22-M-0429. This approach is similar to incremental FTEs for energy efficiency programs, where the incremental FTEs are approved in the Companies' base rate cases but the energy efficiency budgets are reviewed and approved in the New Efficiency New York ("NE:NY") proceeding (Case 18-M-0084).

IX. Operator Qualifications ("OQ") Program Category

Q. Please discuss Staff's proposed adjustments to the OQ program.

A. As explained by the SGIOP, the Companies' forecast OQ Program budgets are based on historic spending with specific adjustments to incorporate the additional training and performance evaluations requirements based on the Commission's "Memorandum and Resolution Adopting Amendments to 16 NYCRR 1 Part 255," issued on March 18, 2022, in Case 19-G-0736 (the "OQ Order"). The Companies forecast includes "Contract Increases," which captures the increased OQ requirements for contractors, based on annual contract costs multiplied by a percentage increase determined by the total number of work types impacted by the increased OQ requirements.

For the Mains and Services and Complex Projects category, the Companies assumed an increase of five percent to capture the additional OQ costs associated with this work. The SGIOP (at 77) takes the position that the Companies "failed to fully explain or justify the assumption of the five percent minimum increase in costs for these types of projects." Instead, the SGIOP proposes to use the two percent increase for expanded OQ requirements the Companies used for other project categories, such as Service Line, Leak Survey, and Damage Prevention.

Q. Does the Panel agree with the SGIOP's proposed adjustments?

A. No. As acknowledged by the SGIOP, the Companies developed a forecast of increased OQ costs based on an assessment of the OQ requirements for each work category. The five percent increase for Main and Services and Complex Construction is justified because

this work involves more OQ requirements than other work (*e.g.*, Service Line). For example, Mains and Service contractors require 20 to 30 qualifications to perform functions such as installing main, replacing services, and performing tie-ins. The more complicated the construction task, the more OQs the individual worker is required to hold. A foreman conducting a tie-in (connecting live gas mains), one of the most complex construction functions, is required to hold 40 or more OQs, with each OQ requiring separate training and testing. By comparison, functions that are less complex, such as locating and inspecting facilities for Service Line Inspections or Damage Prevention, require workers to carry only two OQs.

Rather than apply a single percentage increase to all work categories, the Companies undertook to identify the anticipated impacts of the Commission's expanded OQ requirements on specific projects. This approach produces forecast that better reflect the anticipated cost increase for OQ compliance and, therefore, should be used to develop budgets in this area.

X. Indirect Category

Q. Please describe the SGIOP's proposed adjustments (at 85-95) to the GIOP Indirect portfolio of projects.

A. The SGIOP recommends removal of the following Indirect projects for KEDNY: (1) Facilities – Staten Island 200 Asset Renewal – Replacement; (2) Facilities – L&D Pipeline OQ Training Center; (3) Greenpoint Masterplan – Execution; and (4) Facilities – Greenpoint – Guard Booth / Front Entrance Beautification. The SGIOP also recommends

removal of the following Indirect projects for KEDLI: (1) Melville Hub Asset Renewal – Replacement; (2) Facilities – L&D Pipeline OQ Training Center, Long Island Training Facility; and (3) Facilities – I&R Training-KEDLI.

Q. What does the SGIOP explain as the basis for the removal of these projects?

A. The SGIOP (at 84) expresses concern with the Companies' use of a fit-out guide issued by its consultant, Jones Lang LaSalle ("JLL"), as a means of developing project costs. The SGIOP (at 89) also question the Companies' ability to complete projects included in its budget based on an average historic underspend over a three-year period from FY 2021 to FY 2023 relative to budget in that same period.

Q. Do the Companies agree with the SGIOP assertion (at 85) that utilizing the JLL fit-out guide is an unreliable way to budget projects?

A. No. Benchmark costs in the JLL fit-out guide are developed with input from thousands of projects managed by JLL across North America. The guide relies on actual projects to develop average costs by region and provides them specifically for pre-project planning purposes. Despite the variability of materials, existing space conditions, and final layout all have on a final project budget, the fit-out guide is intended to provide a mid-point for scoping a project's potential costs that takes hard costs, soft costs (design and fees for architecture, engineering, project management, consulting, etc.), furniture, fixtures, and equipment, and potential tenant requirements (information technology, audio/visual, security, etc.) into account. The Staten Island 200 and Melville Hub projects are the type of projects that the JLL fit-out guide is intended to inform, *i.e.*, projects in the pre-planning phase with general office refurbishment requirements captured in the fit-out guide's cost

calculations. Similarly, budgets for the L&D Pipeline OQ Training Center projects for both KEDNY and KEDLI, and the Instrumentation and Regulation ("I&R") Training facility for KEDLI, were informed by the JLL fit-out guide for budgeting purposes because of their similarity to the types of projects JLL uses to develop its fit-out guide.

Q. The SGIOP states (at 89) that historic underspend demonstrates the Companies' inability to deliver the Greenpoint Infrastructure project. Does the Panel have additional information to refute that?

A. Yes. In the winter of 2022, as project complexity and needs increased, the Companies began utilizing the services of JLL to support its facilities function. JLL support includes developing project budgets and scopes, overseeing projects underway, and providing valuable insight into facilities management best-practices. As a result, the Companies' facilities team has been able to meet the needs of the various business functions it supports and is better equipped to meet its budget, a trend anticipated to continue. In FY 2023, the first full fiscal year after JLL began supporting the Company's facilities team, facilities spend exceeded the budget by nearly 400 percent for KEDLI and was at 89 percent of budget for KEDNY. As shown on Exhibit ___ (GIOP-2R), facilities spend for KEDLI in FY 2023 was $3.784 million against a budget of $0.950 million, and in the same period facilities spend for KEDNY was $21.221 million against a budget of $23.855 million. Taking JLL's support into account, and based on FY 2023 spend to budget, the Companies do not see underspending its facilities budgets as a basis for reducing its capital forecast.

Q. Is the SGIOP recommending additional adjustments to KEDNY's and KEDLI's Indirect portfolio of projects?

A. Yes. The SGIOP (at 86) is proposing a downward adjustment to KEDNY's Greenpoint Infrastructure project, as well as the removal of its Greenpoint Masterplan – Execution project (at 93). The SGIOP adjustment to the Greenpoint Infrastructure project would reduce its forecast budget by $6.847 million in the Rate Year, upward adjustments in Data Year 1 and Data Year 2 of $0.782 million and $0.606 million, respectively, and a downward adjustment of $4.240 million in Data Year 3. In total, the SGIOP proposes a downward adjustment to the Greenpoint Infrastructure project of $9.699 million, from $48.500 million to $38.801 million. The SGIOP recommends removing the Companies' proposed Greenpoint Masterplan – Execution project from its revenue requirement, budgeted at $42.400 million from FY 2025 to FY 2028.

Q. Do the Companies agree with the SGIOP's rationale for the adjustment to the Greenpoint Infrastructure project?

A. No. The SGIOP explains that the basis for the downward adjustment to the Greenpoint Infrastructure project is the Companies historic underspend (at 89-90). As previously discussed, the onboarding of JLL in FY 2023 to provide support, expertise, and project management services for the facilities function indicates that, going forward, the Companies are better positioned to meet their budgets and the needs of gas operations at one of the Companies' largest and most diverse facilities in KEDNY's territory. Indeed, the complexity and criticality of investments needed at the Greenpoint site to prevent further impacts to KEDNY's operations, evidenced by the information provided in the

response to IR No. DPS-481, Attachments 9 and 10, copies of which are provided in Exhibit ___ (GIOP- 1R), was a primary consideration when JLL was brought on to support the facilities function.

Q. Is the SGIOP's assertion (at 92) that the Greenpoint Masterplan – Execution project should be removed because it is in the preliminary phase of planning reasonable?

A. No. A comprehensive project like the Greenpoint Masterplan – Execution proposal requires upfront investment in multi-discipline planning that considers engineering, financial, and efficiency efforts to ensure long-term value for the Companies, to the benefit of customer service and reliability.

Further, the adjustment to the overall square footage of the warehouse proposed at Greenpoint as part of the Masterplan – Execution project (referenced at 92) was intended to demonstrate flexibility if, as it states in the response to IR No. DPS-772 provided in Exhibit ___ (GIOP-1), the Long Island Warehouse project is included in KEDLI's revenue requirement. The revised cost estimate that resulted after reducing the size of the Greenpoint warehouse to 50,000 square feet (sf) was developed on a price per sf basis, consistent with the process used to develop the initial estimate for a 100,000 sf building and a process widely used for early-stage project planning purposes before a project's scope is defined.

As important as demonstrating flexibility at the pre-planning phase, the size shift highlights the need for the Greenpoint Masterplan – Execution investment to begin what is expected to be a multi-year process. Doing so in parallel with the Greenpoint

Infrastructure project will ensure that a holistic view of the Companies' downstate facilities needs is considered when addressing much-needed building repairs at the Greenpoint site.

Q. Does the Panel agree with the removal of the Greenpoint – Guard Booth / Front Entrance Beautification project recommended by the SGIOP?

A. Yes. As it indicated in its response to IR No. DPS-916, provided in Exhibit ___ (GIOP-1R), the Greenpoint Guard Booth/Beautification project was inadvertently included in both the Greenpoint Masterplan – Execution forecast and as a standalone project. As a result, the Company agrees that the standalone project can be removed from its FY 2024 budget.

XI. Proposed O&M and FTE Adjustments

A. Tools and Equipment

Q. Please describe the SGIOP's proposed adjustments to the incremental non-labor O&M for Tools & Equipment?

A. The SGIOP (at 101) explains that the incremental non-labor O&M expense for Tools & Equipment is directly linked to the incremental GIOP and Gas Safety FTEs. Accordingly, Staff makes reductions to this category to reflect the number of FTEs supported in Staff's revenue requirement (Exhibit ___ (SRRP-4)).

Q. Does the Panel agree with this adjustment?

A. No, because the Panel does not support Staff's adjustments to the requested FTEs. However, the Panel agrees the Tools and Equipment budget should ultimately reflect the number of incremental gas operations and safety FTEs included in the Companies' revenue requirements.

B. ACI Project

Q. Please describe the SGIOP's proposed adjustments to the incremental non-labor O&M for the ACI Project?

A. Because the SPP recommends removing the ACI Project from the capital budget, the SGIOP recommends removing associated O&M costs.

Q. Does the Panel agree with this adjustment?

A. No. For the same reasons discussed above, the Companies believe the Commission should approve the ACI Project, including associated O&M expense.

C. CSC FTEs

Q. Please describe the SGIOP's proposed adjustment to the proposed incremental FTEs for CSC?

A. Staff considered the Companies' request for additional FTEs in light of the relative size of the CSC budget. Because the FY 2025 CSC budget is lower than the FY 2023 budget, the SGIOP concludes additional resources are not required and, therefore, eliminated the Companies' forecast of incremental FTEs associated with the CSC program.

Q. Does the Panel agree with this adjustment?

A. No. The Companies resources are currently strained to manage an increasingly large and complex CSC program, as demonstrated by the level of CSC work in FY 2023. The current workload is simply not manageable with existing staffing in this area. Therefore, additional resources are currently needed to ensure the Companies are actively managing this program, coordinating with municipalities, and supporting the development of cost-effective solutions to the increasing CSC workload.

D. Facilities FTEs

Q. Please describe the SGIOP's proposed recommendation regarding Facilities FTEs.

A. The SGIOP (at 104) recommends removing the two FTEs requested for the KEDNY (Greenpoint) Warehouse because the new KEDLI warehouse will alleviate the workload in Greenpoint.

Q. Does the Panel agree with this recommendation?

A. No. KEDNY's request for two FTEs to support warehousing requirements is being driven by increased warehousing activity at Greenpoint in support of KEDNY investments in gas operations and infrastructure. Consistent with the Company's response to IR No. DPS-936, provided here as Exhibit __ (GIOP-1R), the two FTEs sought are required to support the 60 percent increase in capital projects in KEDNY over the last three years and expectation that this increased level of investment will continue going forward.

E. Resource Coordinators

Q. Does the SGIOP recommend removal of incremental FTEs the Companies proposed to support delivery of the capital workplan?

A. Yes. The SGIOP (at 106) notes that the Companies have proposed incremental FTEs to support increased capital workload, including work resource coordination and scheduling. The SGIOP rejects two of the three requested FTEs under a theory that "[a]n increase in capital spending does not necessarily mean there is an increase in workload."

Q. Do the Companies agree with these adjustments?

A. No, these FTEs are required to support increasing capital workload. The level of capital expenditures is a reasonable proxy for the amount of work requiring resource coordination and scheduling. Without these incremental resources, the Companies will not be able to develop and deliver the capital plan effectively. Therefore, the Companies oppose removal of the two FTEs.

XII. Other Recommendations

A. Capitalization of Cast Iron ("CI") Joint Repairs (NYC)

Q. What is NYC's position on the Companies' proposal to capitalize all joint repairs on large diameter CI pipes that are sixteen inches and larger?

A. NYC Witness Sano (at 28) proposes that the Commission should review the proposed changes to the capitalization policy for joint repairs on large diameter CI to decide if this work is appropriately included in rate base, while also noting the work would otherwise be recovered as O&M expense.

Q. Does the Panel agree with this recommendation?

A. No, this work is appropriately capitalized because it extends the useful life and integrity of the asset. The Panel's direct testimony also explained that repairing joint seals is the most cost-effective way to address leaks on large diameter CI mains, while also avoiding the public disruptions from full main replacements. (Exhibit___ (GIOP-5, pages 23-26)). NYC witness Sano does not suggest the proposed accounting change is inconsistent with accounting rules or the Commission's regulations. The SGIOP notes that the change would align the capitalization policies with the previously approved treatment for CISBOT and pipe lining, and also align with the capitalization policies for similar work in other jurisdictions. For these reasons, the City's recommendation should be rejected.

B. <u>LPP Unit Cost Incentive</u>

Q. What is the Companies' position on the SGIOP's opposition to the LPP unit cost productivity incentive?

A. The SGIOP (at 111) opposes the Companies' proposed LPP unit cost incentive because it believes the proposed incentive structure presents the potential to earn an incentive without achieving meaningful efficiencies and Staff believes there are already appropriate incentives to manage costs. The Panel does not agree. The LPP unit cost productivity incentive is an appropriate mechanism to encourage better cost management for the proactive LPP retirement program, assuming the targets are set appropriately based on current unit costs.

C. Capital Reporting

Q. Do the Companies support the SGIOP's recommendations for capital reporting?

A. Yes. The Companies support capital reporting that is aligned with the reporting structure adopted in the 2019 KEDNY and KEDLI Rate Cases.

D. Greenpoint LNG Investments

Q. Please address SANE (at 12-17) and AGREE's (at 17-24) recommendations that the Commission should consider more flexible phasing-in of the investment in the Greenpoint LNG Plant, if it is not completely disallowing these projects.

A. As the Panel discusses in detail in its direct testimony, KEDNY maintains on-system supply through its LNG facility at the Greenpoint LNG Plant. The plant is a critical component of KEDNY's gas supply portfolio and gas operating network and plays a critical role in meeting peak demand. Winter Storm Elliot (December 23) highlighted the reliability concerns and the risks of relying on increasingly constrained/unreliable upstream assets. LNG assets provided needed on-system reliability benefits during these increasingly frequent events.

The Companies have answered numerous information requests explaining the need for upgrades to the LNG plant. These investments are supported by the SGIOP and NYC Witness Sano. SANE and AGREE's recommendation that the projects can be deferred or avoided is unsupported and, therefore, should be rejected.

E. Non-Pipes Alternatives ("NPAs")

Q. Please address NYC's contention that the Companies are not doing enough to implement NPAs.

A. The NYCPP (at 8) contends that National Grid has not done enough to advance NPAs in its service areas, and that the Companies must be more proactive in promoting and implementing NPAs. The Companies acknowledge that they have not yet identified a suitable NPA; however, they reject the suggestion that they are not actively seeking to find and implement NPAs.

In August 2022, the Companies submitted NPA screening and suitability criteria in the Gas Planning Proceeding (Case 20-G-0131). The Companies have incorporated the NPA screening process into their capital planning processes to identify potential alternatives to traditional solutions, where such alternatives promote safe and reliable service, satisfy benefit-cost considerations, and can mitigate GHG emissions. This NPA screening process is documented in the project papers the Companies filed in these proceedings (KEDNY Exhibit __ (GIOP-5) and KEDLI Exhibit __ (GIOP-5)).

The Companies also have committed to continue looking for opportunities to advance NPAs in the Rate Year and Data Years and propose to continue to annually submit a request for proposal for NPA solutions and to identify five LPP projects that could be replaced with NPAs. This will include looking for NPAs in Disadvantaged Communities; however, the Companies do not agree that prioritizing Disadvantaged Communities when searching for NPA opportunities will necessarily lead to identifying more NPAs or more beneficial

NPAs. As NYC acknowledges, NPAs generally require the agreement of all customers affected by the proposed alternative, and the Companies cannot unilaterally impose an NPA solution on customers without their cooperation.

Finally, while the Companies contend their approach to NPAs is reasonable, we nevertheless will continue to consider ways to improve the process to identify and implement appropriate NPAs and will incorporate any requirements or guidance on NPAs that come from the Gas Planning Proceeding.

F. <u>Automated Meter Reading ("AMR") Installation - Encoder Receiver Transmitters ("ERT") Purchases Program</u>

Q. Please describe NYC's proposal regarding the AMR-ERT Purchase Program.

A. NYC Witness Sano (at 29) suggests that KEDLI should stop replacing the ERT units for its AMR meters under a theory they are obsolete and that the Companies' ACI program will avoid the need for further investment in AMR.

Q. Do you agree with NYC's position on this issue?

A. No. First, the SGIOP opposes the implementation of the ACI Program. Second, even if the program was supported and approved by the Commission, it would take several years to fully implement, during which time the ERT units would continue to fail as they approach and exceed the end of their useful lives. This would impact KEDLI's ability to read meters and render accurate bills. Therefore, KEDLI cannot simply allow these units

to fail in the field and must make the necessary investments to the replace these units for the foreseeable future.

G. <u>Roadway Excavation Quality Assurance Act</u>

Q. What is the Roadway Excavation Quality Assurance Act?

A. The Roadway Excavation Quality Assurance Act (S.4887/A.5608) (the "Act"), which was signed into law by the Governor on August 16, 2023, mandates prevailing wages for construction workers on roadway excavation projects. Specifically, the Act requires utility company contractors and subcontractors on a "covered excavation project" to pay prevailing wages to laborers, workers, and mechanics. A "covered excavation project" means a construction project where a permit is issued by the state, county, or municipality to use, excavate, or open a street. A prevailing wage is either: (i) the rate set for the trade or occupation in the locality where the covered excavation occurs, or (ii) the rate set by the prevailing scale of union wages on excavation projects where local law or ordinance requires only competent workers be employed on the projects. The Act applies to contracts/permits issued on or after September 15, 2023. The Act will increase the costs of the Companies' street construction work performed by contractors and subcontractors. Given the volume of street construction work necessary to operate and maintain the Companies' underground networks, these incremental costs will be material.

Q. What is the Companies' proposal for the incremental costs to comply with the Act?

A. Given these costs are material and will impact the Companies in the Rate Year and Data Years, the Companies propose that they be allowed to defer the full costs associated with implementation of the Act during the term of the rate plan for future recovery.

H. Miscellaneous

Q. Please address SANE's (at 17) suggestion that KEDLI should "consider retiring pipelines in Eastern Long Island."

A. KEDLI's facilities on eastern Long Island are critical to ensuring the availability of life-sustaining energy for customers who rely on gas service for heating and cooking. SANE does not provide any analysis that would support the position that KEDLI can retire gas facilities in this area.

Q. Does that conclude your testimony?

A. Yes.

INTERROGATORY / DOCUMENT REQUEST

The Brooklyn Union Gas Company d/b/a National Grid NY KeySpan Gas East Corporation d/b/a National Grid
Cases 23-G-0225 and 23-G-0226
Gas Rates

Request No.:	DPS-NYC-1
Request By:	Sara Orsino
Information Requested of:	City of New York
Date of Request:	June 30, 2023
Reply Date:	July 10, 2023
Name & Position of Respondent:	Elisa Velazquez (Deputy Chief Financial Officer, NYC Department of Environmental Protection) and Counsel
Subject:	City/State Construction Cost Sharing Agreement

In all interrogatories, all requests for workpapers or supporting calculations shall be construed as requesting any Word, Excel or other computer spreadsheet models in original electronic format with all formulae intact and unlocked.

Regarding the Cost Sharing Agreement (CSA) between the Brooklyn Union Gas Company d/b/a National Grid NY (KEDNY) and the City of New York and the CSA between KeySpan Gas East Corporation d/b/a National Grid (KEDLI) and the City of New York.

1. Identify the amount of reimbursements owed to KEDNY and/or KEDLI for past City/State Construction work performed by KEDNY and/or KEDLI for the City of New York.

   Response: Amounts allegedly owed pursuant to the Cost Sharing Agreement are currently the subject of settlement discussions between the City of New York and National Grid. By providing this response, the City of New York in no way limits or waives any rights, remedies, claims, or defenses available to it under the Cost Sharing Agreement or otherwise.

2. For the amounts identified in Question 1, above, provide the amounts by Fiscal Year through the end of the Cost Sharing Agreement period, totaling amounts owed and a complete total for both KEDNY and KEDLI.

   Response: See Response to #1.

3. For the amounts identified in Question 1, above, explain why such reimbursements have not yet been paid to KEDNY and/or KEDLI.

   Response: See Response to #1.

Regarding p. 44 of the GIOP testimony, KEDNY states that "[t]he CSA will expire in June 2025 . . . Based on discussions with New York City, the City does not intend to extend the CSA beyond that date, and there is no requirement . . . for an extension."

Cases 23-G-0225 and 23-G-0226

DPS-NYC-1 continued.

4. For both KEDNY and KEDLI, explain why the City of New York does not intend to extend the CSA beyond June 2025. In addition. explain why the City of New York agreed to a cost sharing in its initial agreement.

   Response: The City of New York objects to this question on grounds that it is vague, overly broad, and calls for legal conclusions regarding the City's decisions on entering into and/or extending the Cost Sharing Agreement. Notwithstanding these objections, the City agrees with the statement from KEDNY quoted above.

5. Has KEDNY and/or KEDLI made any efforts to extend the CSA with the City of New York? If yes, provide an explanation of such efforts, and the associated supporting documentation. If not, explain why not.

   Response: The City of New York objects to this question on grounds that (i) it is not relevant and (ii) the information sought by DPS is in KEDNY's and/or KEDLI's custody and control and has been requested from both KEDNY and KEDLI in DPS-597 and DPS-552, respectively.

KEDNY KEDLI Case 23-G-0225/0226 Data Requests

Request for Information

FROM: Sara Orsino

TO: National Grid

SUBJECT: KEDNY - Main Replacement - Reactive - Maintenance

Request:

In all interrogatories, all requests for workpapers or supporting calculations shall be construed as requesting any Word, Excel or other computer spreadsheet models in original electronic format with all formulae intact and unlocked.

Regarding KEDNY Exhibit___(GIOP-1), line item, Main Replacement - Reactive - Maintenance:

1. Explain in detail the scope of this project.

2. Indicate how many feet of main the Company is expecting to replace from this line item for Fiscal Years (FY) 2024 - 2028.

3. Explain how the FY 2024 to FY 2028 costs were forecasted, and provide all supporting workpapers in Microsoft Excel format, including all assumed inflation factors. If historical costs were used to forecast these costs, show how the historical costs were used to calculate the forecasted costs.

4. For each of the past five years (2019-2023), provide the actual and budget spend for this line item. Include the number of feet of main replaced for each year.

Response:

1. This program funds the reactive replacement of sections of main segments and associated services identified during leak repairs or regular maintenance that leak clamps cannot repair, or where simple repairs are not feasible. This program allows Field Operations to quickly make decisions on-site to replace actively deteriorated pipe segments.

2. The Main Replacement – Reactive – Maintenance blanket/program is a reactive program. The Company does not forecast this line item using forecasted units.

3. The Main Replacement – Reactive – Maintenance blanket/program forecast was developed using a two-year average of historical program costs, adjusted for inflation. See Attachment 1 for the calculation.

4. See Attachment 2.

KEDNY KEDLI Case 23-G-0225/0226 Data Requests

Request for Information

FROM: Sara Orsino

TO: National Grid

SUBJECT: KEDNY Service Replacement - Inactive Accounts

Request:

In all interrogatories, all requests for workpapers or supporting calculations shall be construed as requesting any Word, Excel or other computer spreadsheet models in original electronic format with all formulae intact and unlocked.

Referring to KEDNY Exhibit____(GIOP-1), line-item Service Replacement - Inactive Accounts:

1. Explain in detail the scope of this project and indicate whether this line item is a blanket project.

2. Explain how Fiscal Years (FY) 2024 - FY 2028 costs were forecasted, and provide all supporting workpapers in Microsoft Excel format, including all assumed inflation factors used.

3. For the past five years (2019-2023), provide the actual spend and the budget for this line item.

4. Explain why this cost is capitalized.

5. Explain if the spend in Exhibit___(GIOP-1) represents the Cost of Removal.

Response:

1. The Service Replacement – Inactive Accounts line item is a blanket program that provides funding to complete service terminations at unoccupied premises with no active customer account or usage for asset safety reasons.

2. The Service Replacement – Inactive Accounts line item was forecast using a three-year average of the historical actual costs, adjusted for inflation. Please see Attachment 1 for the calculation. When preparing the response to this information request, the Company discovered that, due to a forecast change, the costs for another program were

inadvertently included in the Service Replacement - Inactive Accounts capital line item. The costs for this capital work should have been included in the Main Replacement - Reactive Maintenance capital line item as that is the program the work will be completed under in the Rate Year and Data Years.

3. Please see Attachment 2.

4. Per FERC Account 108, service terminations are charged to a removal activity under the Retirement Work in Progress. Cost of Removal is considered capital/removal therefore represented as such and included in capital.

5. The spend associated with this line item in Exhibit __ (GIOP-1) includes Cost of Removal.

TO: National Grid

SUBJECT: KEDNY Service Replacement - Reactive - Non-Leaks - Other

Request:

In all interrogatories, all requests for workpapers or supporting calculations shall be construed as requesting any Word, Excel or other computer spreadsheet models in original electronic format with all formulae intact and unlocked.

Referring to KEDNY Exhibit____(GIOP-1), line-item Service Replacement - Reactive - Non-Leaks - Other:

1. Explain in detail the scope of this project and indicate whether this line item is a blanket project.

2. Explain how Fiscal Years (FY) 2024 - FY 2028 costs were forecasted, and provide all supporting workpapers in Microsoft Excel format, including all assumed inflation factors used.

3. For the past five years (2019-2023), provide the actual spend and the budget for this line item.

Response:

1. The Service Replacement - Reactive – Non-Leaks/Other blanket program provides funding to complete reactive non-leak work activities outside the normal scope of the Company's integrity, reliability, public works, and growth programs. Examples of work completed under the program include service abandonments due to periods of long-term service inactivity or customer demolition requests, customer-driven relocations of existing services, and substandard conditions discovered during Company field work and inspections. This program is reactive and the annual workplan can vary based on customer requests received and the number of substandard conditions identified in the field.

2. The program forecast was developed using a three-year average of prior program costs, adjusted for inflation. Please see Attachment 1.

3. Please see Attachment 2.

KEDNY KEDLI Case 23-G-0225/0226 Data Requests

Request for Information

FROM: Chris Casey

TO: National Grid

SUBJECT: GIOP

Request:

On page 83 of the Gas Infrastructure and Operations Panel Testimony, lines 8-9, the Company states "[t]he blend rate will initially be fixed at three percent by volume and be increased in increments up to a maximum of 20 percent."

a. What is the timeline for the hydrogen blending from the HyGrid project to increase from three to 20 percent?

b. Please provide supporting documentation showing the feasibility of increasing the blend to 20 percent.

Response:

a. The Company plans to increase hydrogen blending gradually from 3 percent to 20 percent over eighteen months.

b. The Company has surveyed existing research, and also commissioned new research, which show that green hydrogen is compatible with National Grid's gas distribution systems utilizing modern piping at anticipated blend rates, including the system serving Point Lookout. This information is referenced or included in the direct testimony of the GIOP panel on Page 82, as well as Exhibit ___ (GIOP-11) showing research performed by Stony Brook University under contract to NYSERDA. The Company has also developed a set of Frequently Asked Questions (FAQs) and answers covering hydrogen safety evaluations with numerous citations, included here as Attachment 1 and available at https://www.nationalgrid.com/us/hydrogen-hub.

Further, reliability modeling at 20 percent blend indicated no additional infrastructure built up required as shown in Attachment 2.

National Grid thanks the Hydrogen Safety Panel and the Center for Hydrogen Safety for their contributions to this document.

The critical role of hydrogen in our clean energy future

December 2022

Clean hydrogen will play an important role in the decarbonization of the Northeast. It has the potential to decarbonize multiple sectors of the economy by providing a cleaner residential heating fuel, an energy resource for industries that are hard to decarbonize, a zero-carbon transportation fuel for larger vehicles and an on-demand, carbon-free fuel for power generation.

- **A low-cost solution to a clean energy future:** Hydrogen will allow for a balanced and resilient pathway to decarbonization, requiring less buildout of new assets and ultimately minimizing the impact on customer energy bills, all while achieving regional net zero goals. By delivering a blend of hydrogen and renewable natural gas (RNG) in existing networks, customers can access clean heat without making costly investments in new electric appliances or upgrading their electrical systems. This is especially important for renters who don't have the option to upgrade.
- **A safe alternative.** Incorporating hydrogen into the energy mix is part of our plan to eliminate fossil fuels from our systems by 2050 or sooner. It is a clean and safe fuel that will begin to ramp up throughout the decade and eventually scale to meet the needs of the communities we serve. The U.S. gas network has seen hydrogen before. Prior to the mid-1950s before the advent of natural gas, some gas systems including our own networks had as much as 50 percent hydrogen blend flowing in the system.
- **Improved resiliency and reliability of the entire energy system.** Because hydrogen can be stored for long periods of time (analogous to battery storage of electricity), it can be used to generate electricity and heat, and it will help to decarbonize the integrated gas and electric system.

We understand our customers and stakeholders have questions about the use of hydrogen and the role it will play going forward, and we have compiled the following Q&A to address many of these topics.

National Grid's Hydrogen Vision

1. What is clean hydrogen and why is it important to a clean energy future?

Clean hydrogen is a renewable fuel that can be produced emissions-free from water and renewable electricity. This process is part of a nearly-perfect renewable cycle; electricity splits water into hydrogen and oxygen, and when hydrogen is used as a fuel, it combines with oxygen to form water, emitting no carbon dioxide. Clean hydrogen is valuable because it can store energy from renewable sources like solar and wind, either for using directly as a fuel or for generating clean power at another time.

We believe that clean hydrogen is key to a clean energy future and to ensuring we fully eliminate fossil fuels from our electric and gas system by 2050. It plays two major roles:

- Clean hydrogen will help remove emissions from sectors that are hard to decarbonize like heat, certain industries, and heavy transport. In many cases, fully electrifying these sectors would be prohibitively expensive or technically not feasible. Hydrogen provides a clean, carbon-free fuel for these sectors that will replace the carbon-intensive fuels they use today.
- By using clean hydrogen to fuel power generation, we will make a fully-renewable power grid more reliable with less infrastructure build-out (transmission lines, substations, etc.). During times when renewables like solar and wind

are producing less power than is needed (for example, when winds are low or the sky is cloudy), on-demand power generation using clean hydrogen will fill the gaps. And when renewables are making more power than can be used, clean hydrogen can be produced from excess renewable energy and stored for later use in power generation.

2. How and when does National Grid expect to integrate hydrogen into our gas networks?

National Grid is a leader when it comes to delivering clean energy solutions to our customers. We are proactively finding ways to help society transition to a low-carbon and ultimately carbon-free future through research and development, and planning for the evolution of our networks to deliver carbon-free fuels.

Our vision for hydrogen is to create an ecosystem that includes blending hydrogen with renewable natural gas into the existing gas networks, developing 100% hydrogen-fueled use cases for campuses and specific buildings, creating hydrogen clusters anchored by large commercial and industrial customers in a distinct network of hydrogen users, and fueling our power generators.

We are accelerating the energy transition through pilot demonstrations in the next five years to position our assets and operational processes to safely deliver low-carbon energy, like hydrogen. By 2030, we intend to scale up low-carbon energy significantly in conjunction with our existing capital investment plans. With increasing availability of clean hydrogen over time, we will increase the volume of hydrogen blends to displace fossil gas delivered to our customers, with plans to have 20% hydrogen on our gas networks by 2040.[1] In certain sections of our networks, we will deploy 100% hydrogen clusters for customers and communities that will cater to diverse needs. This includes energy usage delivered through fuel cells, district heating, and other uses.

Displacing fossil fuel with hydrogen will be implemented concurrently with our existing programs of energy efficiency, demand response, renewable natural gas, and electrification of heat. Integrating hydrogen with other programs will safeguard the reliable energy that our customers depend on.

In parallel, we are replacing existing gas distribution networks across our service territory as part of long-term programs to modernize its infrastructure, ensure public safety and reduce methane emissions. These programs plan to replace all leak-prone mains by the time high-hydrogen blends are expected to be available and economical.

3. What has National Grid done to ensure that hydrogen is safe?

Working with partners such as Northeast Gas Association's NYSEARCH, GTI Energy, Operations Technology Development (OTD) and Utilization Technology Development (UTD), and other joint industry collaboratives, National Grid has supported nearly 40 research projects covering topics such as personnel and customer safety, pipeline integrity, material compatibility, gas blending, metering and measurement technologies, leak detection and quantification, customer appliance performance, and other end use applications. These studies, along with numerous other scientific studies conducted and published by other entities around the world, have given us insight into how hydrogen will behave in our networks and how we can implement hydrogen in a way that is safe for our customers, employees, and equipment. Specific hydrogen safety topics are explored in the next section of this document.

- We are working with the U.S. Department of Energy and four of their national laboratories on the Pipeline Blending CRADA – a HyBlend Project, which seeks to address technical barriers to blending hydrogen in natural gas pipelines.
- We are working with the New York State Energy and Research Development Authority (NYSERDA) and Stony Brook University to understand how hydrogen will perform in our existing gas infrastructure.
- We are introducing one of the first and largest clean hydrogen blending projects in the country in the town of Hempstead, Long Island, which will heat 800 homes and fuel a fleet of city vehicles.
- We are partnering with the Standard Hydrogen Corporation (SHC) to build and operate SHC's Energy Transfer System, the nation's first multi-use, renewable hydrogen-based energy storage and delivery system, in New York. This project has been approved by New York's Public Service Commission and will have the

ability to provide clean energy services to National Grid and its customers, including renewably charging electric vehicles, refueling long-range fuel cell electric vehicles, providing long-duration backup power, and blending hydrogen into the gas network – all from one piece of infrastructure.

- In the UK, we are launching a research facility to test how Britain's gas transmission network can be used for transporting hydrogen, in partnership with Northern Gas Networks, a gas distribution company. With financial support from the UK regulator Ofgem, blends of hydrogen up to 100% will be tested at the pressures found in the existing network, to assess how the gas behaves and interacts with various parts of the system, such as pipes, valves, and gas meters.

4. How is hydrogen being distributed and used in the U.S. today?

While clean hydrogen is not widely used currently, hydrogen has a long track record of safe transportation, storage, and use in the United States and around the world. Blends of hydrogen and other gases were first used as a residential heating fuel more than 150 years ago, and today Hawaii Gas Company continues to safely deliver residential gas containing up to 15% hydrogen to customers around the Hawaiian Islands.[2] Hydrogen has also long been used in fertilizer production, steelmaking, electric transmission cooling, and other industries. To serve these industries, more than 1,600 miles of pipelines carrying pure hydrogen exist in the U.S. today,[3] including three miles of pipeline in upstate New York.[4] These hydrogen pipelines have been operating safely for decades and are very similar to other gas-carrying pipelines. Hydrogen is also transported via truck as a gas or liquid in cylindrical tanks, or via barge or tanker as a liquid. Additionally, in recent years, hydrogen has seen a growing interest as a transportation fuel, with about 35,000 hydrogen forklifts[5] and over 13,500 hydrogen vehicles[6] operating in the U.S. today.

Worldwide, more than 90 million tons of hydrogen are produced each year.[7]

Hydrogen Safety

5. Is hydrogen safe?

Like any other fuel, hydrogen has unique properties that are managed via the use of appropriate safety measures. Hydrogen is used safely in a wide array of settings across the U.S. and globally, including in gas networks, and is safely transported and stored in both compressed gas and liquid forms (see Q4: "How is hydrogen being distributed and used in the U.S. today?"). This demonstrates that hydrogen is safe when it is implemented properly – a conclusion further supported by many studies, conducted by National Grid and others, that examine specific behaviors of hydrogen and its use in various applications (see Q3: "What has National Grid done to ensure that hydrogen is safe?"). As a member of the Center for Hydrogen Safety and a sponsor of relevant research through numerous academic and industry organizations, we are committed to looking beyond today's research to exhaustively evaluate the safety of hydrogen, exploring and addressing risk.

Safety is National Grid's number one priority, and we will ensure the safety of any hydrogen introduced into our infrastructure and our customers' equipment.

6. Is hydrogen safer or more dangerous than natural gas?

Hydrogen behaves differently from natural gas, but it is not inherently more or less safe. As with introducing any change to our system, we are ensuring that hydrogen is implemented in a way that is safe for our communities, customers, and employees. We have conducted rigorous scientific studies on how hydrogen behaves, which have shown that blends of up to 20% hydrogen in natural gas are safe in our system. In specific segments

of our network where we and the local community agree that transitioning to 100% hydrogen is the best solution, we will only proceed after careful planning about how to introduce hydrogen and with the implementation of new safety features as appropriate. Some of the differences between hydrogen and natural gas are described in the questions that follow.

7. Is hydrogen more flammable than natural gas?

Studies have shown that natural gas blended with up to 25% or 30% hydrogen behaves similarly to pure natural gas,[8] and the blends of hydrogen and natural gas that we intend to deliver to the vast majority of our customers will fall within this range.

When delivered as pure hydrogen (relevant only for specific segments of our network), hydrogen behaves differently from natural gas. For example, while hydrogen is flammable under a wider range of conditions than natural gas, it also disperses more quickly than natural gas, so when released into air it quickly becomes diluted to a level that is no longer flammable.[9] Despite hydrogen's different behaviors, in cases where we deliver pure hydrogen, we will implement appropriate safety features to ensure that hydrogen is as safe or safer than natural gas.

8. Does hydrogen leak more than natural gas?

Hydrogen molecules are smaller than natural gas molecules, and they have the ability to escape through small openings like cracks and gaps more quickly than natural gas molecules might. However, this can be mitigated by using modern plastic piping that reduces the potential for cracks and gaps to form. A recent study found that a main that doesn't leak when it carries natural gas will not leak when it carries hydrogen.[10] In other words, the leak prevention we are doing for natural gas can prevent leaks of hydrogen and hydrogen blends as well.

Over the last five years, we've invested more than $3 billion upgrading our older infrastructure to superior plastic piping, and we continue to do so. Reviews to-date of the plastic pipe that utilities like National Grid are installing show that these materials are compatible with hydrogen.

In every case, before injecting hydrogen into our network, we will confirm the suitability of the piping and all piping components in that section of the network for carrying hydrogen. As described in Q5 ("Is hydrogen safe?") and Q6 ("Is hydrogen safer or more dangerous than natural gas?"), hydrogen is a safe fuel when implemented correctly, and we will ensure that it does not increase safety risks to our communities, customers, and employees.

9. You can smell a natural gas leak and usually know if there's a problem, but hydrogen has no smell. How will you know if there's a leak?

Natural gas has a smell because we add an odorant to the gas to make leaks easier to detect. Research to-date indicates that adding odorants to hydrogen blends or pure hydrogen is feasible for ordinary home uses.[11] The result will be that hydrogen provided to customers will have a similar smell to natural gas for the foreseeable future. Leak detection sensors for hydrogen are also being developed to provide an additional layer of leak protection.

Beyond home uses, further research is needed to determine whether added odorants would need to be removed (via purification) from hydrogen that will be used in a particular type of device called a proton exchange membrane (PEM) fuel cell. PEM fuel cells convert hydrogen to electricity and are commonly used in fuel cell vehicles. This will not affect ordinary home uses of hydrogen or hydrogen blends.

10. Are emergency responders available and trained for handling hydrogen?

Training programs for hydrogen safety are already being used by emergency personnel,[12] and the industry is well-experienced in disseminating safety training to commercial operations, emergency responders, and the public. Hydrogen is already in use across the U.S. (see Q4: "How is hydrogen being distributed and used today in the U.S.?"), and in the Northeast specifically, there are a number of existing hydrogen vehicle fueling stations and other types of hydrogen facilities. First responders for these facilities have already received hydrogen safety training. National Grid will ensure that all first responders for our hydrogen facilities receive appropriate training, and we have already engaged local fire departments to establish best practices.

Hydrogen and Infrastructure

11. Many gas pipelines in the U.S. are steel, which can experience hydrogen embrittlement, resulting in the potential for cracks to form more easily in pipes when exposed to hydrogen. Are current pipelines in the U.S. unsafe for transporting hydrogen?

Hydrogen embrittlement effects in piping have been studied since the 1970s and continue to be the subject of many research studies. Hydrogen embrittlement is primarily a concern when severe structural defects exist in the pipeline and the pressure is high or fluctuating. At the low pressures used in gas distribution networks like ours, studies have shown that the types of steel typically used in distribution networks are unlikely to experience cracking from hydrogen embrittlement within the lifetime of the mains.[13,14,15] Furthermore, much of our upgraded gas network uses piping made from polyethylene plastic, which has been shown to be compatible with hydrogen (see Q8). In every case, before we inject hydrogen into a section of our distribution network, either as a blend or as pure hydrogen, we will confirm the suitability of the infrastructure in that section of the network for carrying hydrogen.

12. Do my appliances need to be modified to be able to use a hydrogen-natural gas blend? Do I need to buy new appliances?

No, most home appliances will not need to be modified or replaced to accept hydrogen blends up to 20%, the amount we intend to blend across most of our distribution network by 2040. Several studies have tested individual appliances and found that they are compatible with hydrogen blends up to 20%.[16,17,18] Further, a recent project in Staffordshire, England confirmed these findings by introducing a 20% hydrogen blend city-wide, observing that appliances performed well and seeing no increase in appliance failures.[19] National Grid has the capability to evaluate how specific appliances common in our service territory will perform when

receiving different fuel compositions, using a predictive tool called RANGE™ Plus.[20] We expect that some very old appliances may need to be replaced to accept a hydrogen blend, however these appliances would likely be replaced within the next few years anyway, before hydrogen is introduced to the gas network. National Grid will only blend hydrogen when and where it is safe for customers' appliances.

For specific segments of our network where we and the local community agree that transitioning to 100% hydrogen is the best solution, we will partner with our customers and communities to identify hydrogen-compatible appliances and facilitate the change.

13. Hydrogen burns with a nearly invisible flame. How will I know that my appliances are lit?

The flames of the hydrogen-natural gas blends that National Grid intends to deliver to customers are blue and visible, much like natural gas flames.[21] For very high rates of hydrogen blending or pure hydrogen service, colorants can be added to hydrogen to illuminate the flame.[22] It's also important to know that home heating appliances like furnaces, boilers, and water heaters use electrical flame sensors or thermocouples to confirm that the appliance is lit, rather than detecting the flame visually. These sensors will continue to function normally with a hydrogen blend or pure hydrogen flame.

Environmental Impacts of Hydrogen

14. Most of the hydrogen today is produced from natural gas. Does this mean hydrogen actually increases, rather than reduces emissions?

Hydrogen can be produced in multiple ways. For many years, hydrogen for use in industries like fertilizer manufacturing and refining has been produced from natural gas through a process called steam methane reforming, which is energy-intensive and emits carbon dioxide. Today, it is possible to produce hydrogen with very limited emissions or even zero emissions, which is called clean hydrogen.

One of those processes is called electrolysis, which uses electricity to split water into hydrogen and oxygen. When electrolysis is powered by electricity from renewables like solar, hydro power, or wind, the hydrogen produced has zero emissions. This zero-emissions hydrogen (sometimes called "green hydrogen") is the type of hydrogen that National Grid intends to supply to customers in our gas network. In addition to being an emissions-free fuel, this type of hydrogen can be generated using electricity that would have otherwise been wasted – for example, at moments when there is more wind power available than the electric grid can accept – thereby allowing us to get more value out of the clean electricity sources we already have.

It is also possible to produce clean hydrogen from natural gas. Unlike conventional steam methane reforming, these processes produce no carbon dioxide or use carbon capture technologies (trapping the carbon dioxide at its source and transporting it to a storage location – usually deep underground – to isolate it). This prevents carbon dioxide from being released to the atmosphere.

15. Is hydrogen a greenhouse gas?

Hydrogen itself is not a greenhouse gas, but leaking hydrogen could interact with greenhouse gases to a very small degree, which is continuing to decline as leak rates are driven down. The climate benefits of transitioning from fossil fuels to clean hydrogen far outweigh hydrogen's global warming impacts.[23]

16. What will National Grid do to maximize the climate benefits of hydrogen?

To maximize the climate benefits of hydrogen, it will be important to minimize the potential for leaks across the entire hydrogen supply chain, as is our responsibility with any fuel flowing through our pipes. National Grid's role in this is three-fold:

1. Preventing leaks in our own network. We are taking precautions to strategically blend hydrogen into the sections of our network with modern, corrosion-resistant infrastructure. Every year, we are upgrading additional gas mains to increase the robustness of our network and will continue to invest in this.
2. Ensuring the integrity of gas lines during the regular safety inspections we conduct on our systems and in our customers' homes.
3. Holding our hydrogen suppliers to high standards regarding leak prevention in their operations.

One analysis concluded that even with very high rates of hydrogen leakage – which are avoidable with careful controls – using hydrogen in place of natural gas would result in a global warming impact that is one-fifth to one-seventh that of natural gas when comparing units of energy. With lower, more realistic leakage rates, the impact of hydrogen is 95% lower than that of natural gas.[24]

17. Does hydrogen emit CO_2?

No, hydrogen doesn't contain carbon, which means that it doesn't emit carbon monoxide or carbon dioxide, a greenhouse gas. When hydrogen is used as an energy source, it emits water vapor.

18. What are nitrogen oxides (NOx)? Do I need to worry about NOx emissions in home use?

Nitrogen oxides (NOx) are molecules that, when emitted into the atmosphere in high amounts, can lead to the formation of smog, a type of local air pollution that can cause negative health effects. NOx forms when nitrogen from the air is exposed to flames or high temperatures. Any flame (even a candle or a campfire) can result in NOx emissions, and home boilers, furnaces, and water heaters release a small amount of NOx through chimneys or vents outside of the home.

Some groups have expressed concern that burning hydrogen may produce more NOx than burning natural gas because hydrogen flames tend to be hotter than gas flames. However, early research findings are that North American home appliances using blends of hydrogen and natural gas similar to the blends National Grid intends to use don't produce more NOx, and in fact often produce less NOx than they produce when using only natural gas.[25,26] This is because when a hydrogen blend heats an appliance, the fuel mixes with more air, cooling the temperature of the flame. There are also known and proven ways to reduce NOx emissions that can be adopted for appliances receiving pure hydrogen. Early evidence shows that this reduces their NOx emissions below the level of gas appliances.[27]

19. What about NOx formation from other uses of hydrogen, like transportation or power generation?

NOx emissions can be controlled or even eliminated entirely in these applications. In fact, the U.S. Environmental Protection Agency (EPA) enforces strict standards on NOx emissions in transportation and power generation, and hydrogen fuels will need to meet these same strict limits.

Hydrogen transportation applications like automobiles and heavy-duty trucking use fuel cells to extract energy from hydrogen. Fuel cells are devices that convert hydrogen to electricity without a flame. Fuel cells produce no NOx. Because of this, hydrogen as a transportation fuel is completely emissions-free of harmful byproducts.

[24] Rocky Mountain Institute, "Hydrogen Reality Check #1: Hydrogen Is Not a Significant Warming Risk," May 9, 2022. Accessed online: https://rmi.org/hydrogen-reality-check-1-hydrogen-is-not-a-significant-warming-risk/

[27] ERM, "Understanding Commercial Appliances for UK Hydrogen for Heat Demonstration," Hy4Heat Program, 2020. Accessed online: https://static1.squarespace.com/static/5b8eae345cfd799896a803f4/t/600b21507e57ed248ed0358b/1611342168875/ERM+FINAL+2020.pdf

Power generation can also use emissions-free fuel cells at a small scale. More commonly, we use gas turbines, which are a different type of device for converting fuels to electricity. There are multiple, established techniques for keeping NOx emissions low when using gas turbines. Right now, turbine manufacturers are designing the world's first gas turbines that use only hydrogen fuel, which they expect will be ready for use by 2030.[28,29] These zero-carbon turbines will emit only very low levels of NOx that are compliant with EPA regulations.

20. How would clean hydrogen be transported from renewable sources like offshore wind? Would this be through trucking and if so, wouldn't that create more emissions?

One of the benefits of clean hydrogen is that in many cases it can be produced close to where it is consumed, reducing the need for transportation. Where transportation is required, we expect that clean hydrogen will ultimately be transported via pipelines, just as gas is transported today. Early on, however, it will be necessary to transport hydrogen by truck or barge until there is enough hydrogen demand to fill a pipeline. The transportation industry is increasingly adopting new technologies to reduce emissions, and during this transitional period, trucks and barges powered by hydrogen or electricity can be used in place of diesel trucks and barges, making transportation pollution-free. Regardless, the climate benefits of replacing fossil fuels with clean hydrogen outweigh any emissions that come from hydrogen transportation (see Q15: "Is hydrogen a greenhouse gas?").

Community Impacts of Hydrogen

21. Many existing and proposed hydrogen projects are located near oil, gas, and chemical facilities, which are disproportionately sited in communities of color and low-income communities. In your planning for the hydrogen hub, is this a consideration of yours? Is this putting communities of color and low-income communities at greater risk from an environmental and safety perspective?

Environmental justice is of critical consideration in our hydrogen plans. With input from our communities and other local stakeholders, we aim to site our projects so that they benefit communities of color and low-income communities, which have historically experienced a disproportionate environmental burden for energy projects.

Hydrogen blending will provide safe, clean hydrogen heating fuel alongside natural gas through the existing networks that feed our customers' homes, in a way that's compatible with their homes' existing appliances. Customers will be able to access clean heat without making costly investments in new electric appliances and upgrading the electrical systems of their homes, which would be required if the future relied on all electric heat. This is especially important for renters who would not be able to upgrade existing appliances.

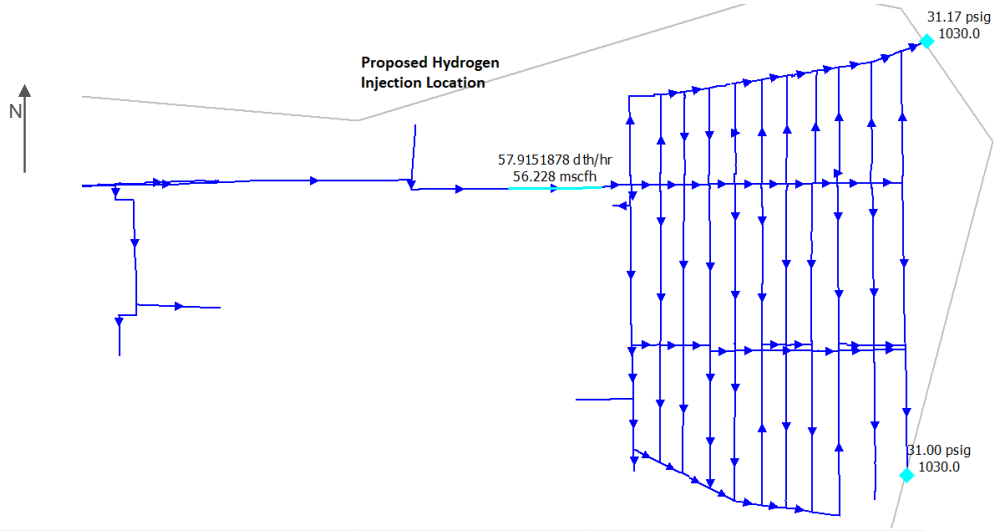

Hydrogen blending will not pose a safety risk (see Q5: "Is hydrogen safe?") and in addition to reducing carbon dioxide emissions that contribute to climate change, can also reduce NOx emissions that contribute to smog (see Q18: "What are nitrogen oxides (NOx)? Do I need to worry about NOx emissions in home use?"). Additionally, the equipment used to produce and blend hydrogen is compact and clean and will not create air pollution.

KEDNY KEDLI Case 23-G-0225/0226 Data Requests

Request for Information

FROM: Reshma Mathew

TO: National Grid

SUBJECT: KEDNY - "Indirects"

Request:

In all interrogatories, all requests for workpapers or supporting calculations shall be construed as requesting any Word, Excel or other computer spreadsheet models in original electronic format with all formulae intact and unlocked.

1. For each "Indirects" project/program listed in KEDNY's Exhibit___(GIOP-1), provide the following:

   a. A detailed breakdown of the estimated labor, material & supply, accounts payable, and any other related costs for each of the Fiscal Years 2024 through 2028 and provide any supporting documents, or workpapers for these cost projections explaining how the Company derived these projected costs.

   b. A detailed project timeline including anticipated start date and in-service date

2. Regarding the datasheets for fleets and facilities capital programs in KEDNY's Exhibit___(GIOP-9), which state that the Company received/conducted assessments at its various facilities to evaluate the conditions, provide a copy of these evaluations completed for each project. Specify who conducted these evaluations and when they were completed.

Response:

1. a. – b. **Facilities Base**

   The GIOP "Indirects" investments, identified in Exhibit ___ (GIOP-1) as Facilities Base, are ongoing capital expenditures that arise and are required to ensure business continuity. The forecast draws from historical work and costs incurred for similar work in recent years.

Facilities - EV Charging

Please refer to the Company's response to DPS-379 for the information that formed the basis for the Company's forecast EV Charging investment.

For the period beginning in the Rate Year and ending in Data Year 3, and consistent with its response to DPS-362, the Company anticipates placing 193 Level 2 and 29 DCFC EV charging stations in service.

Facilities - Safety

This reoccurring investment is for emergent/unexpected, safety-driven capital expenditures on facilities and assets. Examples include unplanned failures of electrical equipment, unexpected work required to maintain compliant fire alarm systems, as well as repairs to leaking roofs and facades. The forecast is based on historical work and costs to perform safety-related work. As these cost events are unplanned, the Company does not have start and in-service dates.

Facilities – Greenpoint Master Plan – Planning

The Greenpoint Master Plan – Planning investment forecast was developed with proposed timelines and deliverables provided by the Company's consultant, JLL, in a site assessment report provided as Attachment 1, and a project proposal, approach methodology, and purchase order provided by the Company's engineering consultant, Burns & McDonnell, provided in Attachment 2. The Planning project is in flight, began in Fiscal Year 2023, and is expected to be in service in Fiscal Year 2024.

Facilities – Greenpoint Warehouse Demolition and Temporary Warehouse

Attachment 3 provides the sanction paper in support of the Greenpoint Warehouse Demolition and Temporary Warehouse investment. This project is in construction, began in Fiscal Year 2023, and is expected to be in service in Fiscal Year 2024.

Facilities – Bay Ridge

The forecast investment for the proposed Bay Ridge facility is based on project budget prepared by the Company's consultant, JLL, provided as Attachment 4. This project is in flight, began in Fiscal Year 2023, and expected to be in service in the Rate Year.

Facilities – Staten Island 200 Gulf Ave: Asset Renewal – Replacement

The forecast for the proposed investment at the Company's Staten Island site was prepared on a cost per square foot performance basis, informed by a report prepared by the Company's consultant, JLL, that includes a current, progressive range of office fit-out costs, provided as Attachment 5, as well as information provided by the Company's engineering consultant, EMG, in a facility condition report provided as Attachment 6.

Facilities – Staten Island Forest Ave: Asset Renewal – Replacement

The capital investment forecast at the Company's Staten Island Forest Avenue facility was prepared on a cost per square foot performance basis, informed by a report prepared by the Company's consultant, JLL, that includes a current, progressive range of office fit-out costs, provided as Attachment 5

Facilities – Jamaica DO, 89-67 162nd Street: Asset Renewal – Replacement

The Company's forecast for the Jamaica Asset Renewal project is based on a cost per square foot performance basis, informed by a report prepared by the Company's consultant, JLL, that includes a current, progressive range of office fit-out costs, provided as Attachment 5. Additionally, a facility condition report prepared by EMG, provided as Attachment 7, informed the targeted approach to replacing building infrastructure by order of importance.

Facilities - Jamaica, 127-11 Farmers Blvd: Asset Renewal – Replacement

The Company's Jamaica Asset Renewal project investment forecast was prepared on a cost per square foot performance basis, informed by a report prepared by the Company's consultant, JLL, that includes a current, progressive range of office fit-out costs, provided as Attachment 5. Additionally, a facility condition report prepared by EMG, provided as Attachment 8, informed the targeted approach to replacing building infrastructure by order of importance. The project is anticipated to commence in Rate Year 3 and be completed in Rate Year 4.

Facilities – Greenpoint Infrastructure

The forecast for the proposed investment in the Company's Greenpoint Infrastructure project was prepared on a cost per square foot performance basis, informed by a report prepared by the Company's consultant, JLL, that includes a current, progressive range of office fit-out costs, provided as Attachment 5. Additionally, a facility condition report prepared by EMG, provided as Attachment 9, informed the targeted approach to replacing building infrastructure by order of importance. Lastly, a comprehensive

estimate for improvements, repairs, and upgrades provided by BL Companies to the Company in 2023 is included as Attachment 10.

The Company anticipates commencing the project in the Rate Year and anticipates continuing the project through Rate Year 4.

Facilities - Roofing Program

The forecast for the Company's Roofing Program was developed on a cost per square foot basis that leveraged market trends, similar roofing projects performed by the Company, and inflation. An ongoing requirement across the Company's facilities, the Roofing Program does not have a start or an in-service date.

Facilities - Arc Flash Program

The Arc Flash Program represents required facility modifications that will enable the Company to meet the OSHA standards for electricity safety, which include but are not limited to evaluating electrical capacities, upgrading electrical infrastructure, equipment re-labeling and safety warnings, and staff training on equipment. The forecast investment was provided by an external firm based on historical work and industry knowledge. The Company anticipates that this program will start in Fiscal Year 2024 and be completed in the Rate Year.

Facilities - L&D Pipeline OP Qual Training Center

The forecast investment for the L&D Pipeline Operator Qualification Training Center is based on a cost per square foot performance basis, informed by a report prepared by the Company's consultant, JLL, that includes a current, progressive range of office fit-out costs, provided as Attachment 5. This project is expected to begin in the Rate Year and expected to be in service in Rate Year 2.

Facilities – Greenpoint Masterplan – Execution

The Greenpoint Masterplan – Execution forecast investment was supported by cost estimates provided to the Company by Burns & McDonnell and JLL, updated most recently in June 2023 and included as Attachment 11. The capital investment for the project anticipates commencement in the Rate Year and running through Rate Year 4, depending on the combination of solutions that the Company executes.

Facilities – Canarsie Bathroom & Locker Room Renovation (C087332)

Attachment 12 provides the Canarsie Bathroom and Locker Room Renovation project sanction paper in support of the forecast investment. This project is in flight and expected to be in service in Fiscal Year 2024.

Facilities – Greenpoint Bathroom & Locker Room Refresh (C087726)

Attachment 13 provides the Greenpoint Bathroom and Locker Room Refresh project sanction paper in support of the forecast investment. This project is in flight and expected to be completed in Fiscal Year 2024.

Facilities - Canarsie Bldg 40; Exterior Windows and Façade (C085209)

Attachment 14 provides the Canarsie Building Exterior Windows and Facade project sanction paper in support of the forecast investment. This project is in flight and expected to be completed in Fiscal Year 2024.

Facilities - Greenpoint Site Electrical Upgrades (C081819)

Attachment 15 provides the Greenpoint Site Electrical Upgrades project sanction paper in support of the forecast investment. This project is in flight and expected to be completed in Fiscal Year 2024.

Facilities - Greenpoint S&S Building Generator to Brightwaters (S008592)

The Greenpoint Shelving and Storage (S&S) Building Generator to Brightwaters project is based on the cost to repurpose a generator used for a short-term solution at the Company's Greenpoint site to the Brightwaters facility. This project is expected to begin in Fiscal Year 2024 and expected to be in service in the Rate Year.

Facilities - Jamaica New Maintenance Facility (C088848)

The forecast investment for the Jamaica New Maintenance Facility is based on a cost per square foot performance basis, informed by a report prepared by the Company's consultant, JLL, that includes a current, progressive range of office fit-out costs, provided as Attachment 5, as well as market data. This project is expected to begin (and be placed in service) in the Rate Year.

Facilities - GP - Guard Booth / Front Entrance Beautification (C089025)

The Greenpoint Guard Booth / Front Entrance Beautification project forecast is based on a cost estimate included in Attachment 11 and was also developed based on a price per square foot performance basis leveraging market trends,

including project soft costs. The project is expected to begin in Fiscal Year 2024 and expected to be in service in the Rate Year.

IT Gas

The Company's IT Gas investments are for repairs and upgrades to IT-related facilities systems listed in more detail in Exhibit ___ (RRP-11), Workpapers to Exhibit RRP-7, Schedule 1 in the Company's rate filing. Cost estimates that formed the basis of the forecast are derived from costs incurred in the Historic Test Year for similar investments. Attachments 16 and 17 provide invoices that support the cost estimates used to develop the forecast.

Fleet and Inventory Management / Warehouse Management (IMWM)

The Company identified categories of increased capital needs due to expected asset upgrades or replacements and expected costs. For fleet, these costs include fleet parts, fuel tank compliance upgrades, fleet tools and equipment, and vehicle lift replacements. For warehouse, these costs include material warehouse racking, material storage containers, warehouse yard upkeep, and digital support. The forecast for these investments is derived from costs incurred in the Historic Test Year for similar investments.

2. The table below provides sites where facility condition assessments and reports were performed, who prepared them, and the date that they were prepared, as well as the associated attachment number.

Site	Assessment / Report Date	Assessment / Report Preparer	Attachment Number

EXECUTIVE SUMMARY

Project Detail

On December 10, 2018, visited the Property to observe and document the condition of the building and site components.

Items	Description
Project Name	GREENPOINT
Property Type	
Full Address	287 Maspeth Ave Brooklyn, NY 11211
Year Built	1920
Gross Building Area (GSF)	259,176
Current Replacement Value (CRV)	$68,292,876
CRV/GSF ($/Sq Ft)	$264

Building Description

Property Executive Summary

National Grid Greenpoint is a multi-building campus that houses service, maintenance, engineering, vehicle fleet maintenance, meter operations and warehouse personnel. The buildings date from the 1920s to the late 1980s in construction date.

Architectural Structural Executive Summary

For the most part the buildings at this site are similarly constructed steel framed structures with flat roofs. The most common exterior finishes are brick veneer, concrete masonry veneer or painted steel siding. There are also a number of structures that are not currently in use or only partially in use and at least two of which are planned to be demolished.

Mechanical/Electrical/Plumbing Executive Summary

The heating systems in each building generally consisted of natural gas boilers of varying capacities which supply steam or heated water to radiators or unit heaters located throughout each structure. The central cooling systems in the larger Fleet, Service and Meter Operations buildings include ground or roof mounted cooling towers. The other buildings are either served by through wall or ductless air conditioners or not air conditioned. Domestic hot water is provided to all buildings by natural gas hot water heaters with the exception of building 13 which has an electric water heater.

Site Executive Summary

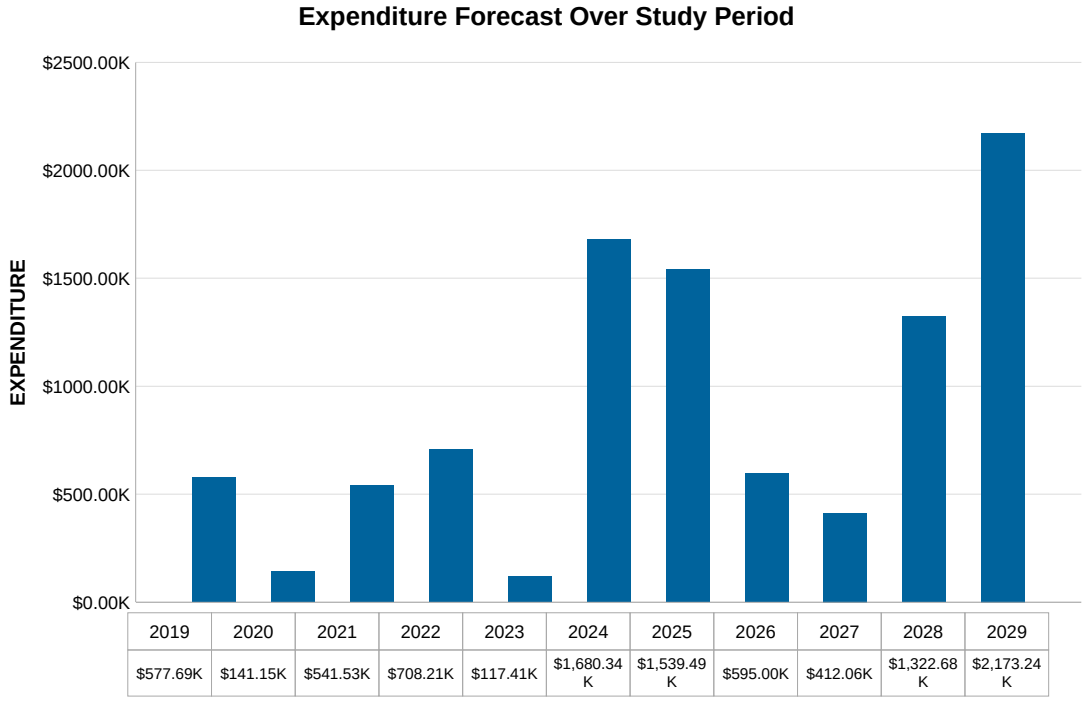

The site is mostly asphalt pavement for either parking or drive lanes and bare dirt and gravel. The entire site is surrounded by chain link fencing and there is further fencing throughout the site.

Summary Of Findings

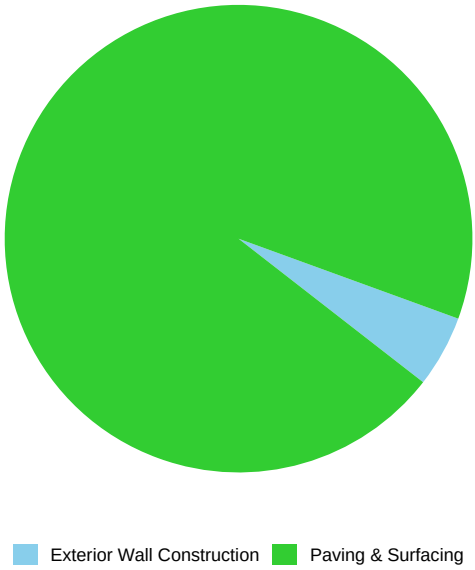

This report represents summary-level findings for the Property Condition Assessment. The deficiencies identified in this assessment can be combined with potential new construction requirements to develop an overall Long Term Capital Needs Plan that can be the basis for a facility wide capital improvement funding strategy. Key findings from the Assessment include:

Key Findings	Metric
Facility Condition Index (FCI)	0.85 %
Current Replacement Value (CRV)	$68,292,876
Immediate Capital Needs (Current Year or Year 0)	$577,686
Short Term Capital Needs (Year 1 to 5)	$3,188,628
Long Term Capital Needs (Year 6 to 10)	$6,042,469
TOTAL Capital Needs (Year 0 to Year 10)	**$9,808,783**
Average Capital Needs Per Year	**$980,878**

The building expenditure summary section provides an executive overview of the findings from the assessment. The chart below provides a summary of yearly anticipated expenditures over the study period for the GREENPOINT building. In addition, we have scheduled key findings highlighting key items of greater than $5,000 and their anticipated failure year. Further details of these expenditures are included within each respective report section and within the expenditure forecast, in Appendix A of this report. The results illustrate a total anticipated expenditure over the study period of approximately $9,808,783.

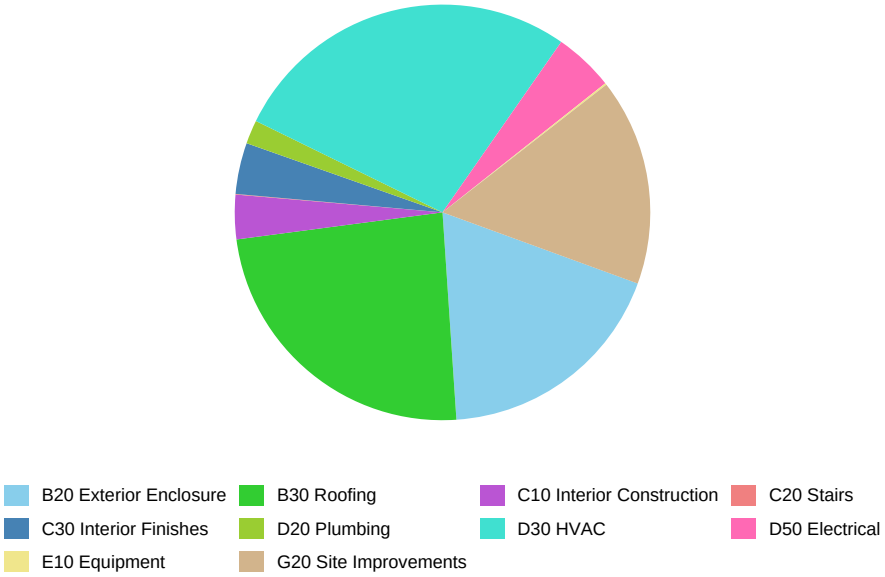

Distribution of Immediate Needs by Building System

Building System	Estimated Cost	Percentage of Total Cost
Exterior Wall Construction	$28,686	4.97 %
Paving & Surfacing	$549,000	95.03 %
Total	**$577,686**	**100 %**

Distribution of Future (Year 1-Year 10) Needs by Building System

Distribution of Capital Needs by Building System

Building System	Estimated Cost	Percentage of Total Cost
B20 Exterior Enclosure	$1,696,405	18.38 %
B30 Roofing	$2,214,333	23.99 %
C10 Interior Construction	$318,568	3.45 %
C20 Stairs	$4,490	0.05 %
C30 Interior Finishes	$368,001	3.99 %
D20 Plumbing	$170,208	1.84 %
D30 HVAC	$2,532,533	27.43 %
D50 Electrical	$428,659	4.64 %
E10 Equipment	$12,237	0.13 %
G20 Site Improvements	$1,485,662	16.09 %
Total	**$9,231,097**	**100 %**

Facility Condition Index

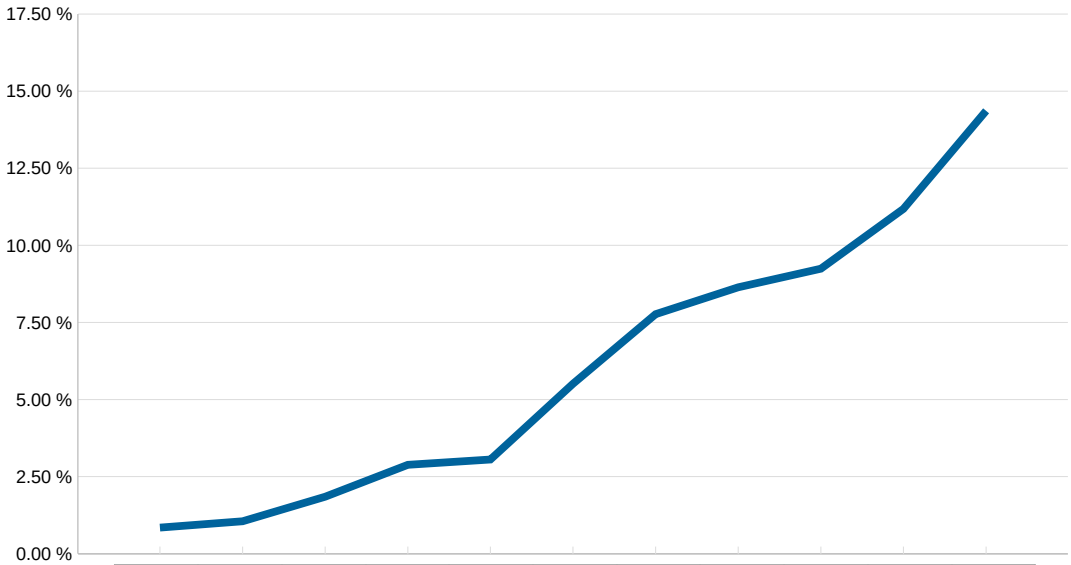

In this report we have calculated the Facility Condition Needs Index (FCNI) which is used in Facilities Management to provide a benchmark to compare the relative condition of a group of facilities. The FCNI is primarily used to support asset management initiatives of federal, state, and local government facilities organizations.

The FCNI is the ratio of accumulated Total Cost (TC) (Deferred Maintenance, Capital Renewal and Plant Adaptation) to the Current Replacement Value (CRV) for a constructed asset calculated by dividing the TC by the CRV. The range is from zero for a newly constructed asset, to one for a constructed asset with a TC value equal to its CRV. Acceptable ranges vary by “Asset Type’, but as a general guideline the FCNI scoring system is as follows:

Condition	Definition	Percentage Value
GOOD	In a new or well-maintained condition, with no visual evidence of wear, soiling or other deficiencies.	0% to 5%
FAIR	Subject to wear and soiling but is still in a serviceable and functioning condition.	5% to 10%
POOR	Subjected to hard or long-term wear. Nearing the end of its useful or serviceable life.	Greater than 10%
V-POOR	Subjected to hard or long-term wear. Has reached the end of its useful or serviceable life. Renewal now necessary.	Greater than 60%

The Chart below indicates the cumulative effects of the FCI ratio over the study period assuming the required funds and expenditures are NOT provided to address the identified works and deferred maintenance each year.

Cumulative Effects of FCI Over the Study Period

2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029
0.85 %	1.05 %	1.85 %	2.88 %	3.05 %	5.51 %	7.77 %	8.64 %	9.24 %	11.18 %	14.36 %

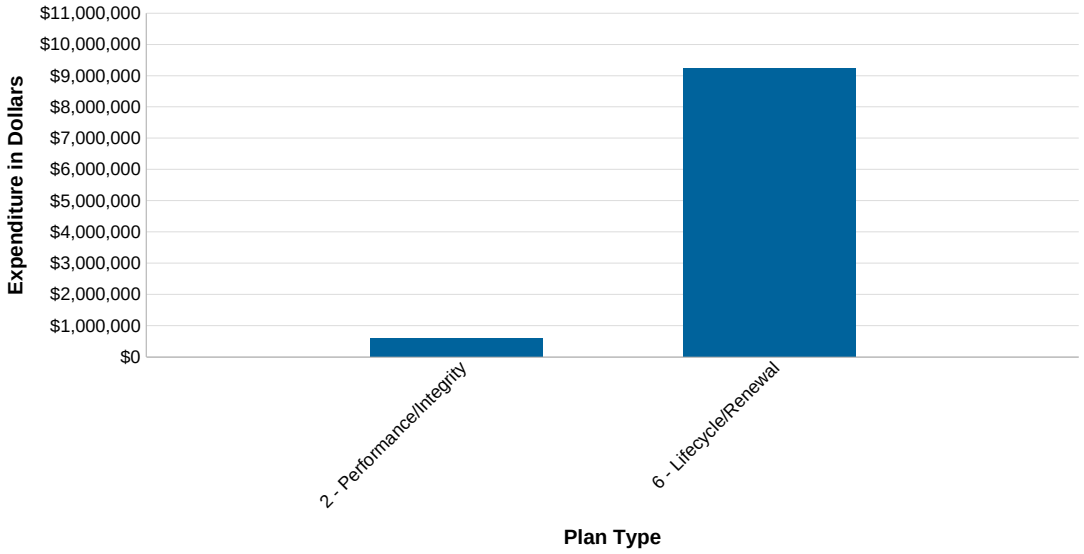

Needs Sorted by Plan Type

has prioritized the identified work according to the Plan Type or deficiency categories in order to assist with analyzing the deficiencies found during the assessment. The following Plan Types are shown below:

Plan Type 1 Safety (SFT):	An observed or reported unsafe condition that if left unaddressed could result in an injury; a system or component that presents a potential liability risk.
Plan Type 2 Performance/Integrity (P/I):	Component or system has failed, is almost failing, performs unreliably, does not perform as intended, and/or poses a risk to overall system stability.
Plan Type 3 Accessibility (ADA):	Does not meet ADA, UFAS, and/or other handicap accessibility requirement.
Plan Type 4 Environmental (ENV):	Improvements to air or water quality, including removal of hazardous materials from the building or site.
Plan Type 5 Modernization/ Adaptation (MOD):	Conditions, systems, or spaces that need to be upgraded in appearance or function to meet current standards, facility usage, or client/occupant needs. This plan type also includes, when deemed necessary, the removal of decommissioned assets. Modernization/Adaptation items are NOT included in the FCI calculation.
Plan Type 6 Lifecycle/Renewal (L/R):	Any component or system in which future repair or replacement is either anticipated beyond the next several years or is of minimal substantial early-term consequence.

The chart below illustrates the breakdown of expenditure according to the Plan Type or deficiency categories providing an opportunity to strategically plan and effectively direct funding.

Planning Horizon Needs by Category

Building System	Total Cost
2 - Performance/Integrity	$587,535
6 - Lifecycle/Renewal	$9,221,248
Total	**$9,808,783**

Introduction

In accordance with the purchase order contract held between National Grid and EMG Corp., this completed report provides a comprehensive Facility Condition Assessment of the GREENPOINT located at 287 Maspeth Ave, Brooklyn , NY, 11211 (The Property).

This report provides a summary of the facility information known to us at the time of the study, the scope of work performed, an equipment inventory, evaluation of the visually apparent condition of the Property together with a forecast of capital expenditures anticipated over the next 10 years. The expenditure forecast does not account for typical preventative maintenance items such as changing filters to fan coil units.

Our cost rates to produce life cycle and replacement cost estimates are based on our knowledge of the local regional market rates. The data in this report represent an opinion of probable cost of construction and is made on the basis of the experience, qualifications, and best judgment of the professional consultant familiar with the construction industry.

The report provides a summary of the anticipated primary expenditures over the 10-year study period. Further details of these expenditures are included within each respective report section and within the deficiency report, in Appendix A.

In this report we have calculated the Facility Condition Needs Index (FCNI) which is used in Facilities Management to provide a benchmark to compare the relative condition of a group of facilities. The FCNI is primarily used to support asset management initiatives of federal, state, and local government facilities organizations.

Limiting Conditions

This report has been prepared for the exclusive and sole use of National Grid. The report may not be relied upon by any other person or entity without the express written consent of .

Any reliance on this report by a third party, any decisions that a third party makes based on this report, or any use at all of this report by a third party is the responsibility of such third parties. Any reuse without written verification or adaptation by for the specific purpose intended will be at user's sole risk and without liability or legal exposure to .

The assessment of the building/site components was performed using methods and procedures that are consistent with standard commercial and customary practice as outlined in ASTM Standard E 2018-08 for PCA assessments. As per this ASTM Standard, the assessment of the building/site components was based on a visual walk-through site visit, which captured the overall condition of the site at that specific point in time only.

No legal surveys, soil tests, environmental assessments, geotechnical assessments, detailed barrier-free compliance assessments, seismic assessments, detailed engineering calculations, or quantity surveying compilations have been made. No responsibility, therefore, is assumed concerning these matters. did not design or construct the building(s) or related structures and therefore will not be held responsible for the impact of any design or construction defects, whether or not described in this report. No guarantee or warranty, expressed or implied, with respect to the property, building components, building systems, property systems, or any other physical aspect of The Property is made.

The recommendations and our opinion of probable costs associated with these recommendations, as presented in this report, are based on walk-through non-invasive observations of the parts of the building which were readily accessible during our visual review. Conditions may exist that are not as per the general condition of the system being observed and reported in this report. Opinions of probable costs presented in this report are also based on information received during interviews with operations and maintenance staff. In certain instances, has been required to assume that the information provided is accurate and cannot be held responsible for incorrect information received during the interview process. Should additional information become available with respect to the condition of the building and/or site elements, requests that this information be brought to our attention so that we may reassess the conclusions presented herein.

The opinions of probable costs are intended for global budgeting purposes only. has no control over the cost of labor and materials, general contractor's or any subcontractor's method of determining prices, or competitive bidding and market conditions. The data in this report represent an opinion of probable cost of construction and is made on the basis of the experience, qualifications, and best judgment of the professional consultant familiar with the construction industry. cannot and does not guarantee that proposals, bids, or actual construction costs will not vary from this or subsequent Cost Estimates. The scope of work and the actual costs of the work recommended can only be determined after a detailed examination of the site element in question, understanding of the site restrictions, understanding of the effects on the ongoing operations of the site/building, definition of the construction schedule, and preparation of tender documents.

KeySpan Gas East Corporation d/b/a National Grid
The Brooklyn Union Gas Company d/b/a National Grid NY

KEDNY KEDLI Case 23-G-0225/0226 Data Requests

Request for Information

FROM: Reshma Mathew

TO: National Grid

SUBJECT: KEDNY - Facilities - Greenpoint Masterplan - Execution

Request:

In all interrogatories, all requests for workpapers or supporting calculations shall be construed as requesting any Word, Excel or other computer spreadsheet models in original electronic format with all formulae intact and unlocked.

Referring to KEDNY Exhibit___(GIOP-1), Facilities - Greenpoint Masterplan - Execution and DPS-481:

1. Explain in detail the scope of this project, differentiating phase 1, phase 2, and phase 3. Provide all risk assessments that support the justification of this project, and provide all sanction papers associated with this line item.

2. In MS Excel format, provide a detailed breakdown of $1,000,000 spend in Fiscal Year (FY) 2024, $4,600,000 spend in FY 2025, $10,300,000 spend in FY 2026, $17,500,000 spend in FY 2027 and $10,000,000 spend in FY 2028. In MS Excel format, provide all workpapers that support the forecast of these costs (quotes, bids, contracts, etc.).

3. If a Cost Benefit Analysis (CBA) was performed, provide all workpapers of such CBA. If a CBA was not done, justify the need for this project and identify and quantify any cost savings.

4. Identify any risks if this project is not completed.

5. Provide the facility condition assessment for all buildings at Greenpoint.

6. Explain whether the Company has received adequate permits associated with the Greenpoint Masterplan - Execution. If it has, provide the permits. If it has not, indicate when the Company expects to receive them.

Response:

1. The Greenpoint Masterplan – Execution project is multi-phased and addresses a range of infrastructure and building system deficiencies. It seeks to achieve a safe working environment at all buildings and the broader Greenpoint site, targeting improvements and replacements in a cost effective manner while seeking to enhance public and employee safety and wellbeing.

   Key elements of the proposed Greenpoint Masterplan – Execution investment include:

   - Building a new warehouse up to 100,000 sf;
   - Providing a new, secure site entry and creating a simplified site circulation pattern that separates pedestrian pathways from vehicular routes;
   - Constructing a new office building;
   - Demolishing the existing service building and warehouse;
   - Locating new office building fronting on Maspeth Avenue with opportunities for public use;
   - Building a new covered storage building, extending useful life of materials;
   - Building a new enlarged weld shop;
   - Providing an additional, centralized, and consolidated fleet parking area;
   - Creating a new green space at the former salt water pump house site for public use and beautification;
   - Renovating the existing fleet services building;
   - Improving existing site pathways and roadways to support new traffic patterns on Varick Avenue and the pathway between the Varick Control site and the Maspeth Gate Station;
   - Adding laydown area west of Varick Avenue;
   - Providing additional consolidated employee parking on Maspeth Avenue;
   - Demolishing non-critical 1920s-era buildings that are at end-of-life;
   - Improving existing site yards and drainage systems.

This project is being broken into three separate phases, described below and detailed in Attachment 11 to the Company's response to DPS-481:

Phase 1

- Complete Masterplan design;
- New Site Entry;
  - Improve roadway access north of Maspeth Avenue
  - Activate and improve Varick Road
  - New employee parking area
  - New visitor parking
  - New security enterance
- Building new materials storage and inventory warehouse;
- Building new laydown yard;
  - Improve central yard

Phase 2

- Demolish existing warehouse;
- Centralize fleet parking;
- Build new covered storage;
- Construct new office building;
- Construct new weld shop.

Phase 3

- Demolish buildings 11 and 12;
- Demolish old weld shop;
- Demolish old service building;
- Fleet parking EV installation, area repaving;
- Expand meter operation warehouse;
- Develop employee parking inside site fence.

2. The table below provides a cost estimate for Phase 1 activities. It was prepared by the Company's engineering and property consultants, Burns McDonnell and JLL, and can be found on Attachment 1.

Phase 1 Estimated Costs	
· Complete Master Planning Design	$ 1,000,000
· New Site Entry	17,907,222
Improve roadway access north of Maspeth Avenue	
Activate and improve Varick Road	
New employee parking area	
New visitor parking	
New security entrance	

· Build new warehouse*	17,533,596
· Build new laydown yard	6,959,182
Improve central yard	
Total Estimated Phase 1 Costs	**$ 43,400,000**
*Based on 50,000 SF Warehouse. Size dependent on LI Warehouse development	

3. – 4. Benefits associated with replacing buildings that are approximately 100 years old with modern ones include decreased repair and maintenance expenses, improved material availability in support of Company operation and maintenance needs, and a safer and more efficient working environment for Company personnel based at the Greenpoint site.

Foregoing investment in the Greenpoint Masterplan presents risks to Company operations, service times, capital project delivery timelines, material availability delays, poor non-stock material storage conditions, building closures due to failing infrastructure, code violations, and increasingly unsafe parking and pedestrian conditions on site.

5. Please see Attachment 9 to the Company's response to DPS-481 for the Greenpoint site facility condition assessment report.

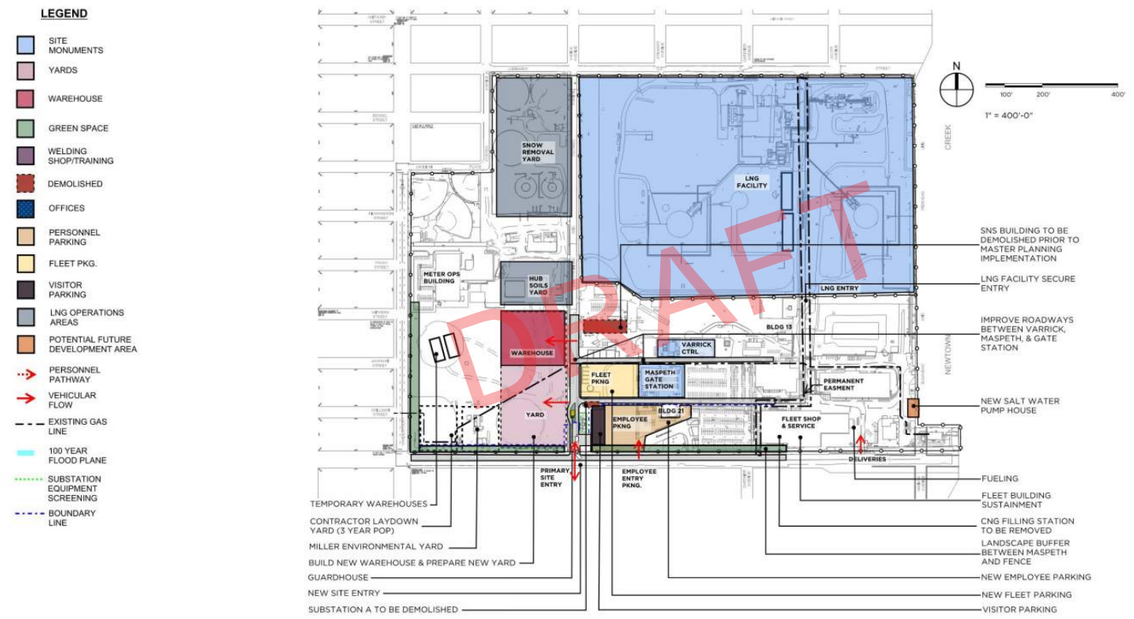

6. The Company has not begun the permitting process for the Greenpoint Masterplan – Execution investment and expects to do so in FY25.

KEDNY KEDLI Case 23-G-0225/0226 Data Requests

Request for Information

FROM: Reshma Mathew

TO: National Grid

SUBJECT: Facilities - GP-Guard Booth/ Front Entrance Beautification

Request:

In all interrogatories, all requests for workpapers or supporting calculations shall be construed as requesting any Word, Excel or other computer spreadsheet models in original electronic format with all formulae intact and unlocked.

1. Referring to KEDNY Exhibit____(GIOP-1) and the Company's response to DPS-481, the Company forecasts spending $1,300,000 in FY 2024 for the project: Facilities - GP - Guard Booth/ Front Entrance Beautification and stated that this project is expected to be in service in the Rate Year. Yet, the Company's response to DPS-481 also indicated that this project is included as part of line item: Facilities - Greenpoint Masterplan - Execution. Explain the reason for this discrepancy and identify if this is a duplication of the project included in the Greenpoint Masterplan - Execution.

Response:

1. The Facilities – GP – Guard Booth/Front Entrance Beautification project was intended to be included in the FY 2024 forecast Facilities – Greenpoint Masterplan – Execution investment but was inadvertently included as a standalone FY 2024 project in Exhibit ___ (GIOP-1). The standalone Facilities – GP – Guard Booth/Front Entrance Beautification project line item should be removed as the project is reflected in the FY 2024 Facilities – Greenpoint Masterplan – Execution line item.

KEDNY KEDLI Case No. 23-G-0225/0226 Data Requests

Request for Information

FROM: Sara Orsino

TO: National Grid

SUBJECT: KEDNY FTEs Warehouse DNY and Facilities DNY

Request:

In all interrogatories, all requests for workpapers or supporting calculations shall be construed as requesting any Word, Excel or other computer spreadsheet models in original electronic format with all formulae intact and unlocked.

Referring to KEDNY's incremental Full Time Employees (FTEs) request for Warehouse DNY and Facilities DNY:

1. Provide the current total number of FTEs for both the Warehouse DNY and Facilities DNY.

    a. Provide the total square footage of the Warehouse DNY.

    b. Provide the total number of FTEs for both line items from Fiscal Year (FY) 2019 - FY 2023.

2. Provide the total Operations and Maintenance cost for both line items from FY 2019 - FY 2023.

3. For both line items, explain in detail why the Company is proposing to add two additional FTEs in the Rate Year for both line items.

    a. Provide workpapers that support the additional two FTEs for each year.

4. As of July 1, 2023, identify if any of the requested incremental FTEs have been hired for these line items.

    a. If yes, identify how many incremental FTEs have been hired for these line items.

5. For Warehouse DNY, explain the 'Material Handle' position title.

    a. Does the Company expect an increase of material at the Warehouse DNY?

6. For Facilities DNY, explain the 'Mechanic B' position title and the 'Facilities Repair' job description.

   a. Explain what 'needs of the business are' that require two additional 'Mechanic B' positions for this line item.

   b. Does the Company expect an increase of facilities repair at its Facilities DNY?

      i. If yes, compare the facilities repairs from FY 2024 to FY 2025 and justify why these two additional FTEs are needed for the Rate Year.

Response:

1. a. - b. The incremental FTEs proposed for KEDNY are for two purposes: (i) two FTEs to support the Greenpoint warehouse (line item "Warehouse DNY" in Exhibit ___ (GIOP-8)); and (ii) two FTEs to support general facilities day-to-day operations (line item "Facilities DNY" in Exhibit ___ (GIOP-8)).

Warehouse DNY

The Greenpoint warehouse is the sole warehouse in Downstate New York that currently services both KEDNY and KEDLI. The Greenpoint warehouse has reached capacity, has serious condition issues as discussed in the response to DPS-772 and DPS-775, and can no longer reasonably support KEDNY or KEDLI.

The table below shows the current total number of FTEs for the Greenpoint warehouse. These numbers have been the same over the period FY 2019 through FY 2023.

Warehouse DNY FTEs	
WHSE Day Shift	17
WHSE Night Shift	11
WHSE Non-Stock	7
NYC Free-bins	8
Management	7
Total	**50**

The total square footage of the Greenpoint warehouse is as follows:

Warehouse DNY Square Footage (sf)	
Stock Warehouse	55k
Third Party (outsourced)	32k
Non-Stock Warehouse	54k
Outdoor Main Storage	140k
Outdoor LNG Fence Line	101k
Outdoor Non-Stock	138k
Total	**520k sf**

Facilities DNY

The table below shows the current total number of FTEs for "Facilities DNY." These numbers have been the same over the period FY 2019 through FY 2023.

Facilities DNY FTEs	
Clerks	1
Mechanics	11
Management	1
Total	**13**

2. Please see Attachment 1 for total Operations and Maintenance costs for "Warehouse DNY" and "Facilities DNY" from FY 2019 - FY 2023.

3. The proposed FTEs for both the Warehouse DNY and Facilities DNY are needed to meet increased activity in both the Warehouse DNY and Facilities DNY functions above the staffing requirements in the Historic Test Year.

   Specifically, with respect to the two FTEs for the Greenpoint warehouse, the warehouse is experiencing a larger volume of capital projects than in the Historic Test Year – a 60 percent increase over the last three years. The Company expects this increased level of activity to continue in the Rate Year and Data Years given the need for the critical investments to support the safety, reliability, and clean energy investments proposed in the filing. The FTEs are needed to, among other things, receive, handle, store, and disburse inventory, and cycle count gas transmission and distribution material, tools, and equipment associated with the increased capital investments and projects. In addition, they are needed to prepare forms, records, and reports associated with this increased level of work.

   The two FTEs for Facilities DNY are required to address the anticipated incremental increases in the day-to-day work to oversee, maintain, monitor, and repair the Company's aging facilities. As previously described, the Company's facilities continue to age and deteriorate; therefore, incremental work is required to maintain these facilities to ensure the safety of employees and the public.

   a. Please see Exhibit___(RRP-11), Workpapers to Exhibit RRP-3, Schedule 41, Workpaper 1 for details on the FTEs.

4. a. Please see the Company's response to DPS-273 for the hiring status for these FTEs.

5. The Material Handler position has the following duties and responsibilities:

   - Receive, handle, store, disburse, inventory, and cycle count gas transmission and distribution materials, tools, and equipment.

- Preparing forms, records, and reports associated with this work.
- Load and unload material, check material received, prepare material orders, process returns, advise on items on which stock is getting low.
- Utilize standard technology provided by department to assist with the electronic processing and physical handling of materials and material orders, and participating in coordination and inventory reconciliations.
- Be thoroughly familiar with materials, tools, and equipment and with their location and use.
- Keep storeroom in neat and orderly condition.
- Instruct other employees in the above duties.
- Forklift certified, operate as required.
- Operate a truck mounted forklift as required.
- Qualify for and having Class A CDL license (no restrictions) as required.
- Be familiar with motor vehicle traffic laws, state and local.
- Operate a tractor trailer/straight truck and make minor adjustments or repairs when necessary. Shall be responsible for economical and safe loading of the vehicle and shall assist in loading and unloading.
- Responsible for delivery of materials to designated locations.
- Perform similar or less skilled work as may be assigned.
- Provide pipe yard support as required.

5. a. As noted above, there has been an approximate 60 percent increase in inventory levels at the Downstate New York Warehouse facilities in the past three years and the Company anticipates that trend to continue because of increased gas capital investments necessary to support the safety and reliability of the system and meet the State's clean energy goals.

6. The Mechanics B position title is the same role as the Facilities Repair job description. Please refer to Attachment 2 for the Mechanic B job description and duties.

   a. The Mechanic B position performs facilities repair work, as needed, and provides guidance to on-site contractors. The additional positions will support a projected increase in workload above the Historic Test Year.

b. The Company anticipates break fix and emergency repairs to increase at its facilities until necessary and comprehensive infrastructure and asset condition repairs and replacements are performed. The two additional FTEs will allow the Company to respond to emergent break-fix work and everyday facilities obligations in support of the Company's operations.

i. The break fix volume has been increasing year-over-year due to the age and condition of the facilities. The Company does not expect a decrease in work orders until all downstate New York facilities are repaired or replaced due to aging conditions. While it is difficult to predict what will break or need repair until it happens, the Company is experiencing a trend of dramatic increases in repair projects.
