Before the Public Service Commission

THE BROOKLYN UNION GAS COMPANY d/b/a NATIONAL GRID NY
And
KEYSPAN GAS EAST CORPORATION d/b/a NATIONAL GRID

Rebuttal Testimony

of

Gas Supply Panel

Dated: September 22, 2023

I. Introduction **1**

II. Purpose of Testimony **1**

III. RNG Supply Pricing **2**

IV. Greenpoint Energy Center **3**

V. Iroquois ExC Project **8**

VI. Hydrogen and RNG Pricing **8**

I. Introduction

Q. Please identify the members of the Gas Supply Panel.

A. The Panel consists of Elizabeth D. Arangio, Samara Jaffe, and Robert K. Moore.

Q. Is this the same Panel that previously submitted direct testimony and corrections and updates testimony in these proceedings?

A. Yes. The defined terms in the Panel's direct testimony and corrections and updates testimony have the same meanings in this rebuttal testimony.

II. Purpose of Testimony

Q. What is the purpose of the Panel's rebuttal testimony?

A. The purpose of the Panel's rebuttal testimony is to respond to the testimonies of the Department of Public Service Staff ("Staff") Gas Supply & Reliability Panel ("SGSRP"), Alliance for a Green Economy ("AGREE"), Natural Resources Defense Council ("NRDC") and Sane Energy Project ("SANE"). Specifically, the Panel will address:

1. Renewable Natural Gas ("RNG") supply price concerns raised by the SGSRP.
2. The need for the Greenpoint Energy Center ("GEC") in the supply portfolio in response to AGREE and SANE's testimonies.

3. The need for the Iroquois ExC Project ("ExC") in the supply portfolio in response to SANE's testimony.
4. NRDC's testimony regarding the cost of hydrogen and RNG supplies.

Q. Are you sponsoring any exhibits as part of your rebuttal testimony?

A. Yes, the Panel's testimony includes the following exhibit:

- Exhibit __ (GSP -1R) Information Request ("IR") No. AGREE-14.

III. RNG Supply Pricing

Q. The SGSRP (at 19) "recommends that RNG pricing should not be at a premium to the traditional supply portfolio unless it is implemented as an NPA solution that is providing quantified system benefits, and offsetting traditional capital projects, supporting such a premium cost to customers." Does the Panel agree with this approach?

A. Yes. The Companies will review all gas sales agreements with Staff prior to execution with potential RNG providers, consistent with past practice. The last two such agreements executed by the Companies specified an RNG price based on a market index associated with the nearest city gate where the RNG is being injected into the distribution system.

IV. Greenpoint Energy Center

Q. Does the Panel agree with AGREE's statement (at 24) that the GEC "has been significantly below its capacity for at least the last 10 years, potentially allowing for lower deliveries from the facility and implying that certain capital investments could be delayed or even avoided"?

A. No. The importance of the GEC as an on-system asset cannot be stressed enough. The GEC is a critical component in the Companies' resource portfolio, which provides supply, operational, reliability benefits in the following four areas:

- Supply Resource: liquefied natural gas ("LNG") supports the Companies' supply needs on the coldest days to *existing customers*. On-system LNG supplies in the resource portfolio enhances supply reliability and diversity.
- Balancing Resource: LNG is a very flexible supply resource in the portfolio because the Companies have the ability to call on the facility whenever needed, whether it is for a 24-hour period or a four-hour period. LNG allows the Companies to maintain the supply and demand balance, as well as meet hourly peaks.
- Reliability Asset: The Companies' LNG facilities are reliable assets because the Companies have total control over when LNG is utilized to meet customer demands. Also, the LNG assets

provide critical reliability in the event of pipeline operational flow orders ("OFO") (*i.e.*, reductions in delivery). These restrictions can be initiated for various reasons - but the Companies are seeing increased pipeline reliability concerns with more frequent OFOs due to compressor station failures during cold weather operations. LNG plants serve as the supply of last resort for customers, as these resources can be brought online with minimal notice when pipeline supply is interrupted.

- Distribution System Resource: LNG is used to support the distribution system by bringing on LNG when needed to support system pressures.

Prior to the start of each winter season, the Companies top off the tanks at the GEC to be full for use throughout the winter season. There is an unusable tank "heel" of approximately 10 percent of storage capacity (or 155,000 Dth). On a peak day, the maximum vaporization capability of approximately 291,000 Dth is needed to serve firm customers, which represents approximately 10 percent of the total peak day supply. Of the total usable inventory, only five days at maximum vaporization can be utilized in the winter. It is prudent gas supply planning practice to preserve this valuable asset from unnecessary use. For this reason, the Companies and Staff worked to develop an Interruptibility Matrix ("Matrix") in 2012

that provides guidelines for the use of peaking supplies. The Matrix prohibits the use of LNG to supply non-firm customers, except under certain operating conditions. The level of dispatch over the past 10 years, as described in the Companies' response to IR No. AGREE-14 provided in Exhibit __ (GSP -1R) is consistent with the anticipated utilization of LNG assets under the operational parameters outlined in the Matrix. The proposed capital investments in the GEC will ensure continued reliability of this peak day supply.

Q. Does the Panel agree with AGREE (at 22) that "increased peak day supply through either upstream transportation, city gate purchases or CNG" is a realistic alternative to GEC?

A. No. The Companies have already constructed five CNG injection sites on Long Island to support peak day supply needs. The GEC supplies are also needed on a peak day and provides storage capabilities that CNG cannot replicate. The CNG injection sites require over 200 trucks to be delivered to Long Island on a peak day. It is not reasonable to propose implementing more CNG injections sites due to the logistical challenges involved in transporting that much supply via trucks. Fixed supply resources like the GEC (as compared to CNG injection by truck deliveries) eliminate transportation risks, are much more resilient than portable/mobile assets,

and offer enhanced reliability through redundant equipment – providing greater assurances that energy will be available when needed most. Additionally, among the more significant operational benefits, LNG vaporization can run for 24 hours or more to address a critical supply shortfall, provided there is adequate gas supply in the tank. The CNG sites, by comparison, are designed to run for eight hours of operation, mostly due to the logistics of securing adequate CNG trucking supplies. Accordingly, LNG vaporization provides relatively greater reliability benefits for longer duration supply events.

Any upstream transportation contracts available on interstate pipelines, or city gate supplies offered by marketers, would need to have primary point deliverability to the Companies' city gates. The Companies would also need to ensure that they have sufficient takeaway capability on the distribution system to flow incremental supply from the city gates. Because of the location of the GEC, and the local system requirements to maintain adequate pressures, the only feasible alternative to the GEC would be additional gas supplies via the Transco and/or Tetco pipelines. The Companies are already contracted to receive maximum volumes at their Transco city gates. To increase takeaway capability at the

Companies' Tetco-Goethals city gate, a large on-system project would be required.

Q. Does the Panel agree with SANE (at 12) that the Company should plan "for the complete retirement of all gas infrastructure at the Greenpoint Energy Center by 2030"?

A. No. The forecast peak day does not justify the retirement of the GEC by 2030. In fact, even with GEC at its current vaporization capability, the Companies are projected to be approximately 160,000 Dth short on a peak day by the winter of 2032/33. Similar to AGREE, SANE argues that "minimal utilization" is another reason to stop maintaining the GEC. As stated above, the GEC is still a needed peak day supply to serve *existing customers* that cannot be easily replaced. The fact that the GEC only operates a few days each winter is not a reason to retire the facility in the absence of a reliable alternative to meet customers' energy needs.

V. Iroquois ExC Project

Q. Does the Panel agree with SANE (at 9) that the Company should cease support for ExC to comply with the Climate Leadership and Protection Act ("CLCPA")?

A. No. The Company, along with Consolidated Edison Company of New York, Inc., pursued this project due to increasing peak day demand. While total gas demand has moderated due to recent warmer winters and increased demand-side programs, the Companies are still experiencing load growth in their service territories. Additionally, SANE does not provide any specific analysis or justifications to support its claim that the project does not comply with CLCPA.

VI. Hydrogen and RNG Pricing

Q. Does the Panel agree with NRDC's concerns (at 30-31) regarding potentially high costs of hydrogen and RNG supplies?

A. No. As stated above, the Companies plan to negotiate a market-based price with future RNG providers so the cost to procure RNG will proximate the cost of traditional gas supplies. Producers will be able to offset some of their costs by monetizing the environmental attributes associated with RNG injections.

With regard to the cost of hydrogen, as NRDC acknowledges, the Inflation Reduction Act Production Tax Credit for hydrogen is not known at this time. Therefore, the NRDC projections are preliminary at best. The Companies will evaluate the results of the HyGrid demonstration project and all associated costs, including the cost of supply. For the HyGrid demonstration project, the Company expects recovery of reasonably priced hydrogen supplies.

Q. Does that conclude the Panel's rebuttal testimony?

A. Yes, it does.

KEDNY KEDLI Case 23-G-0225/0226 Data Requests

Request for Information

FROM: Jessica Azulay

TO: National Grid

SUBJECT: Gas Supply

Request:

Please provide all dispatch data for the Greenpoint LNG Plant, specifically how it has vaporized and liquified gas over the past 10 years along with daily system sendout and degree days for those days when vaporization occurred.

Response:

Attachment 1 lists all dates in the last 10 years when the Greenpoint LNG Plant has liquified and vaporized.

Name of Respondent: Date of Reply:
