CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.
UPDATE TESTIMONY OF CUSTOMER ENERGY SOLUTIONS PANEL

I. Introduction

Q. Please state the names of the Customer Energy Solutions Panel ("Panel") members.

A. Raghusimha Sudhakara, Gregory Elcock, Britt Reichborn-Kjennerud, Thomas Magee, and Michael Badeski.

Q. Has the Panel previously submitted testimony in this proceeding?

A. Yes, the Panel submitted direct testimony as part of the Company's January 2025 filing.

Q. What is the purpose of the Panel's update testimony?

A. We are updating our direct testimony to reflect:

(i) Removal of the Company's funding request for Electric Vehicle ("EV") Technology and Market Studies; and

(ii) Clarifications to the Panel's direct testimony addressing the Earning Adjustment Mechanisms ("EAMs").

Q. Are the updated costs related to EV Technology and Market Studies reflected in the Company's updated revenue requirement?

A. Yes.

II. Update

A. EV Technology and Market Studies

Q. What is the Company's proposal the EV Technology and Market Studies.

A. The Company has reevaluated the existing resources available along with leveraging internal and external sources to complete the studies. As such, we have removed this project from our request, in our direct testimony (pp. 28-32) and its associated white paper pages 18-20 of Exhibit __ (CES-6, pp. 18-20). The Panel has also prepared Exhibit __ (CES-5 UPD) to reflect this removal.

Q. Does this update affect the Company's incremental operation and maintenance ("O&M") request and associated O&M exhibits?

A. Yes. This change reduces the Company's incremental O&M request by $1.9 million, and is included in Exhibit___ (CES-2 UPD).

B. Earning Adjustment Mechanisms (EAMs)

Q. With regard to Panel's direct testimony addressing EAMs, does the Panel have any corrections?

A. Yes. We have corrections to the testimony addressing two EAMs, the Demand Response and DER Utilization Storage EAM, and one exhibit correction for the Bus Emissions EAM.

Q. Please describe the Company's first correction.

A. The Panel's direct testimony (p. 58) addressing Demand Response stated "Additionally, recent SCR program changes, including those to capacity factors, caused enrollment volatility in the 2019-2024 EAM baseline period." This testimony is revised to read: "Additionally, any potential enrollment volatility in the SCR program due to changes proposed by the NYISO to the program would occur in future years."

Q. What is the reason for this correction?

A. The initial language did not properly characterize the New York Independent System Operator's ("NYISO") proposed SCR program changes. It was written as if the changes were already in effect, which they are not.

Q. Please describe the Company's second correction.

A. The Panel's direct testimony (p. 65) addressing DER Utilization Storage stated that "The baseline is set as 65% of achievement of policy goals... in alignment with historical trends." This testimony is revised to read: "The baseline is set as 65% of achievement of policy goals in alignment with the prior year."

Q. What is the reason for this correction?

A. The initial language did not accurately characterize the baseline. The 2026 baseline value aligns with the AC-MW installed in 2024.

Q. Please describe your corrections to the EAM exhibits.

A. Page 29 of Exhibit __ (CES-7) states that "targets are based on a combination of market forecasts and policy goals for adoption of light-duty electric vehicles." Instead of referring to light-duty electric vehicles, this exhibit should have referred to electric buses, as this EAM is focused on electric buses.

Q. Does this conclude your update testimony?

A. Yes, it does.
