The Brooklyn Union Gas Company d/b/a National Grid NY and KeySpan Gas East Corp. d/b/a National Grid for Gas Service (the Companies) propose that the Iroquois Enhancement by Compression project (ExC) project is necessary to supply gas to their customers. (**https://www.iroquois.com/operations/projects/exc-project/**) All upstream emissions impacts of this project including from Iroquois ppl. connections to other pipelines, the Tennessee gas ppl. Connection at Wright, NY. , and the Trans Canada ppl. Connection in Waddington, (and possibly others including the Dominion ppl. connection in Canajoharie, NY) and the original source of the natural gas must be considered and I believe reported to be in compliance with the Climate Leadership & Community Protection Act. (CLCPA). All these upstream sources will be continuing through the ExC impacted compressor stations.

The companies state that air permits are not in place for the ExC project. As of a compliance report to FERC from August 8, 2023, Iroquois Gas Transmission System, L.P. to FERC Docket No. CP20-48-000 Update on Status of Federal Authorizations, the ExC

project is still awaiting air permits from the New York State Department of Environmental Conservation (NYDEC) and the Connecticut Department of Energy and Environmental Protection (CTDEEP). And hence Iroquois has not yet requested nor received authorization to commence construction of the various compressor station expansions.

I have not seen if there is an arrangement with Iroquois ppl to provide them with the gas if the air permits are denied; the compressor stations and pipeline would still be operational. I don't know if there are there other contingencies, or if Iroquois ppl gas would be removed from consideration? If Iroquois ppl were to are used without ExC, the analyses of green house gas emissions (per CLCPA mandates) will still need to be completed For all the sources of natural gas. (Actually all Natural Gas upstream emission sources for the companies and this rate case will need to be reported and I contend the cost for all this should not be included in any customer rates.) In 1996 Iroquois ppl received the second largest fine from the EPA

next to the Exxon Valdez oil spill for breaking the clean water act in Their construction. Article here: https://www.ogj.com/home/article/17234585/iroquois-fined-for construction-violations.

While many of the damaged water crossings, dredging, etc. were rectified, many aspects of the pipeline construction were not corrected, for instance laying the pipe on large rocks vs, settling gravel. (I would like reserve a placeholder for possible further evidence) Expanding or "enhancing" the amount of gas going through apipeline has been known to have serious repercussions as evidencedin three towns in Merrimac Valley Massachusetts killing one and injuring 23. See this 2018Washington Post article wapo.st/3YWGqbb quoted here "Before the explosions on Thursday, Columbia Gas notified customers that it would be "upgrading natural gas lines in neighborhoods across the state." The utility said the move would bring increased reliability and "enhanced safety features." When they upgraded the amount of gas pressure was increased according to other reports (which I might

like to add testimony later?). If the ExC project has all permits approved, and the amount of gas being virtually doubled via three compressor stations (via the addition of ~12,000 HP of compression and gas cooling at Iroquois'Athens, NY Compressor Station, which is at ~10,000 hp now, the addition of ~12,000 HP of compression and gas cooling at Iroquois'Dover, NY Compressor Station which is at ~18,000 hp now and the addition of ~24,000 HP of compression at Iroquois' Brookfield, CT Compressor Station at ~18,000hp now, in essence A total increase from~46,000hp total now to ~94,000hp ,plus the apparent need for the addition of gas cooling only at Iroquois 's Milford, CT Compressor Station), results in an a breach, an explosion, personal injury, etc. in a similar way to the Merrimac Valley events referenced above, as well as others not noted here and the Companies are inany way found financially (morally?) culpable or liable I wouldbelieve this should not be reflected in any rate increases for the CASE 23-G-0225 | 23-G-0226companies' clients.
